Bhubaneswar**

## FORWARD

Groundwater is a major natural replenishable resource to meet the water requirement for irrigation, domestic and industrial needs. It plays a key role in the agrarian economy of the state. Though richly endowed with various natural resources, the state of Odisha has a long way to go before it can call itself developed. Being heavily dependent on rain fed agriculture; the state is very often exposed to vagaries of monsoon like flood and drought. The importance of groundwater in mitigating the intermittent drought condition of a rain-fed economy cannot be over emphasized.

To monitor the effect caused by indiscriminate use of this precious resource on groundwater regime, Central Ground Water Board, South Eastern Region, Bhubaneswar has established about 1750 National Hydrograph Network Stations (NHNS) (open / dug wells) and piezometres in the state of Odisha. The water levels are being monitored four times a year. Besides, to study the change in chemical quality of groundwater in time and space, the water samples from these NHNS are being collected once a year (Pre-monsoon) and analysed in the Water Quality Laboratory of the Region.

Dissemination of technical information in a way that is very useful to the user agencies is an important aspect that plays a vital role in the safe and optimal development of groundwater resources of our country. As an effort in this direction, Central Ground Water Board is bringing out "Groundwater Year Book" each year. The present report contains the observations and results of water levels in the state of Odisha for the year 2023 (April) - 2024 (January). It is sincerely hoped that this report will be immensely useful to various user agencies, Engineers, Scientists, Administrators, Planners and others involved in groundwater planning, development and management.

The present compilation is outcome of commendable efforts put in by **Mrs. Mausumi Sahoo, Scientist-D**, **Mrs. Purba Bera, Scientist-C**, **Mr. Bibhuti Bhusan Sahoo, Scientist-C**. Water level monitoring and water sampling was carried out by the officers of the Region.

Bhubaneswar  
September 2024

(Dr. Bikram Kumar Sahoo)  
REGIONAL DIRECTOR

## **EXECUTIVE SUMMARY**

The State of Odisha spreading over an area of 1,55,707 sq. Km is bounded between North latitude  $17^{\circ}49'$  to  $22^{\circ}34'$  and East longitude  $81^{\circ}24'$  to  $87^{\circ}29'$ . Success of agricultural operations and consequent economy of the state are related to the availability of water and its optimal utilization.

The average annual rainfall of the state is 1482 mm. Nearly 86% of the annual rainfall is contributed by the southwest monsoon. From the departure data it is discerned that from 1980 to 2023, negative departures is seen in most of the years.

The state is underlain by diversified rock types which range in age from Precambrian to the Cenozoic age. The Precambrians occupy nearly 80% of the total geological area of the state.

A total number of 1750 Hydrograph Network Stations have so far been established and are being monitored in the state.

During April 2023 the water level (meter below ground level) in the state varies from minimum of 0.1 mbgl in Nayagarh district to a maximum of 16.05 mbgl in Mayurbhanj district and water levels mostly range from 2 to 10 mbgl. Some wells in the hilly districts recorded water level in 10-20 m range.

During August 2023, depth to water level ranges from 0.01 mbgl in Bhadrak district to 11.35 mbgl in Mayurbhanj district and in majority (58.36%) of NHS wells level was in the range of 0-2 m below ground level and 35.25% of wells in 2-5 m below ground level.

During November 2023, the depth to water level ranges from 0.01 mbgl in Bargarh to 13.00 mbgl in Kandhamal and in majority (39.03%) of NHS wells level was in the range of 0-2 m below ground level and 50.11% of wells in 2-5 m below ground level. In general the water level in the state during November 2023 monitoring is found in the range of 0-2 m bgl especially in the coastal stretch and in parts of the hilly terrain, whereas 2-5 m bgl water level is found in the coastal and hard rock terrain.

During January 2024, the depth to water level ranges from 0.18 to 13.15 mbgl and in majority (62.25%) of NHS wells level was in the range of 2-5 m below ground level and 16.26% of wells in 0-2 m below ground level. In general the water level in the state during January 2024 monitoring is found in the range of 2-5 m bgl, whereas 0-2 m bgl water level is found in the coastal and command areas in the state.

The comparison of April 2023 water level with that of the same period of the previous year shows that 12.85%, 29.09% and 3.64% of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 and more than 4m respectively. Similarly, 56.10%, 7.71% and 3.12% recorded fall in water level in the range of 0-2, 2-4 and more than 4m respectively.

The comparison of August 2023 water level with that of the same period of the previous year shows 30.96%, 2.17%, 0.10% of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 and more than 4m respectively. Similarly, 59.60%, 5.80% recorded fall in water level in the range of 0-2, 2-4 respectively and 1.39% recorded more than 4m fall.

The comparison of November 2023 water level with that of the same period of the previous year shows that 40.94%, 5.31%, 0.76% of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 and more than 4m respectively. Similarly, 44.81%, 6.52%, 1.67% recorded fall in water level in the range of 0-2, 2-4 and more than 4m respectively.

The comparison of January 2024 water level with that of the same period of the previous year shows that 47.70%, 4.60%, 1.10% of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 and more than 4m respectively. Similarly, 42.50%, 3.40%, 0.70% recorded fall in water level in the range of 0-2, 2-4 and more than 4m respectively.

A comparison of August 2023 water level with that of April 2023 shows that 35.53%, 34.80%, 26.78 % of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 and more than 4m respectively. Similarly only 2.89% recorded fall in water level in the range of 0-2m. No well recorded fall more than 2 m range.

A comparison of November 2023 water level with that of April 2023 shows that 38.83 %, 34.85 %, 17.46 % of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 and more than 4m respectively. Similarly only 6.35% , 1.40% and 1.12% recorded fall in water level in the range of 0-2, 2-4 and more than 4m respectively.

A comparison of January 2024 water level with that of April 2023 shows that 55.62%, 23.29%, 3.83% of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 and more than 4m respectively. Similarly only 15.80%, 1.30% and 0.16% recorded fall in water level in the range of 0-2, 2-4 and more than 4m respectively.

The comparison of April 2023 water level with that of the decadal mean of the corresponding period shows that 45.18%, 4.73% and 0.74% of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 and more than 4m respectively. Similarly, 43.97%, 4.82% and 0.56% recorded fall in water level in the range of 0-2, 2-4 and more than 4m respectively.

The comparison of August 2023water level with that of the decadal mean of the corresponding period shows that 45.94%,3.08% and 0.53% of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 and more than 4m respectively. Similarly, 45.26%, 4.14% and 1.05% recorded fall in water level in the range of 0-2, 2-4 and more than 4m respectively.

The comparison of November 2023 water level with that of the decadal mean of the corresponding period shows that 46.01%, 2.90% and 0.39 % of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 and more than 4m respectively. Similarly, 45.77%, 4.07 % and 0.86% recorded fall in water level in the range of 0-2, 2-4 and more than 4m respectively.

The comparison of January 2024 water level with that of the decadal mean of the corresponding period shows that 43.19%, 2.92% and 0.57% of the total NHS wells recorded rise in water level in the range of 0-2, 2-4 andmore than 4m respectively. Similarly, 47.73%, 4.38% and 1.22% recorded fall in water level in the range of 0-2, 2-4 and more than 4m respectively.

# **GROUND WATER YEAR BOOK**

## **(2023 - 2024)**

### **1.0 INTRODUCTION**

The State of Odisha with a geographical area of 1,55,707 sq. km is bounded between North latitudes  $17^{\circ} 49'$  and  $22^{\circ} 34'$  and East longitudes  $81^{\circ} 24'$  and  $87^{\circ} 29'$ . The State comprises of 3 revenue divisions, 30 districts, 58 subdivisions and 314 community development blocks. The state's population largely depends on agriculture. Success of agricultural operations and the consequent agrarian economy of the state are dependent on the availability of water and its optimal utilization. The total population of the state as per 2011 census is 419.73 lakhs, out of which the rural population is 349.70 lakhs and the urban population is 70.03 lakhs. The rural population is almost dependent on agriculture for their livelihood and the agriculture on availability of water. A consistent ground water database is inevitable for planning of judicious and optimal utilization of ground water through an efficient resource management system for which the prerequisite is a reliable monitoring system.

Keeping this perspective in view, Central Ground Water Board carries out the ground water monitoring through a network of observation wells - the National Hydrograph Network Stations. The National Hydrograph stations set-up is a system of spatially distributed observation points for ground water regime monitoring at which periodic monitoring is carried out viz. recording of water levels, temperature and collection of water samples for chemical quality analysis for building a robust database to cater to multitude of needs for ground water management.

Groundwater monitoring data so collected forms an important input for water management. One of the main objectives is the prediction of future conditions or future scenarios, based on background samples of historical data, which may consist of repeated measurements from a single monitoring well. Also the monitoring is being carried out with a view to observe the rise or fall of the ground water levels and change in quality of water with changing stress conditions.

The studies include periodic measurement of water levels, temperature, and collection of water samples for determination of chemical constituents. Apart from evaluation of groundwater resources from time to time for developmental planning, this also helps in forecasting groundwater regime behaviour with

progressive development of groundwater or effects of other recharge or discharge conditions, which helps in adopting remedial measures when necessitated.

For achieving these objectives 1750 nos. of observation wells have so far been established all over the state by CGWB, to serve as permanent Hydrograph Network Stations for the purpose of monitoring of groundwater regime. In selecting hydrograph stations due consideration has been given to the hydrogeological, hydrochemical aspects and their location in river Basin/ Sub basin/ Watershed etc.

To strengthen the water level monitoring network and to avoid the possibility of dug wells used as NHNS being filled up due to extraneous activities, some purpose built piezometers have been constructed by the Central Ground Water Board under its normal activities as well as under World Bank Aided Hydrology Project. In course of time it is proposed to replace all the dug wells used as observation wells with piezometers for better monitoring.

## 2.0 PHYSIOGRAPHIC FEATURES

The State presents varied and picturesque landforms. The Southern and Central parts of the State in Rayagada, Kalahandi, Kandhamal and Gajapati districts present a rugged hilly tract. Plateau occupies the Northern districts of Sundergarh, Keonjhar and Mayurbhanj and parts of Nawarangpur district in the Southwest. Undulating plains characterizes the major river valleys. A narrow coastal plain borders the Bay of Bengal.

Physiographically the state can be divided into five distinct units, namely (i) Coastal plains, (ii) Northern uplands, (iii) The erosional plains of Mahanadi and other river valleys (iv) South Western hilly region and (v) Subdued plateaus. Physiography of the state has been presented in **Plate:-2.1**

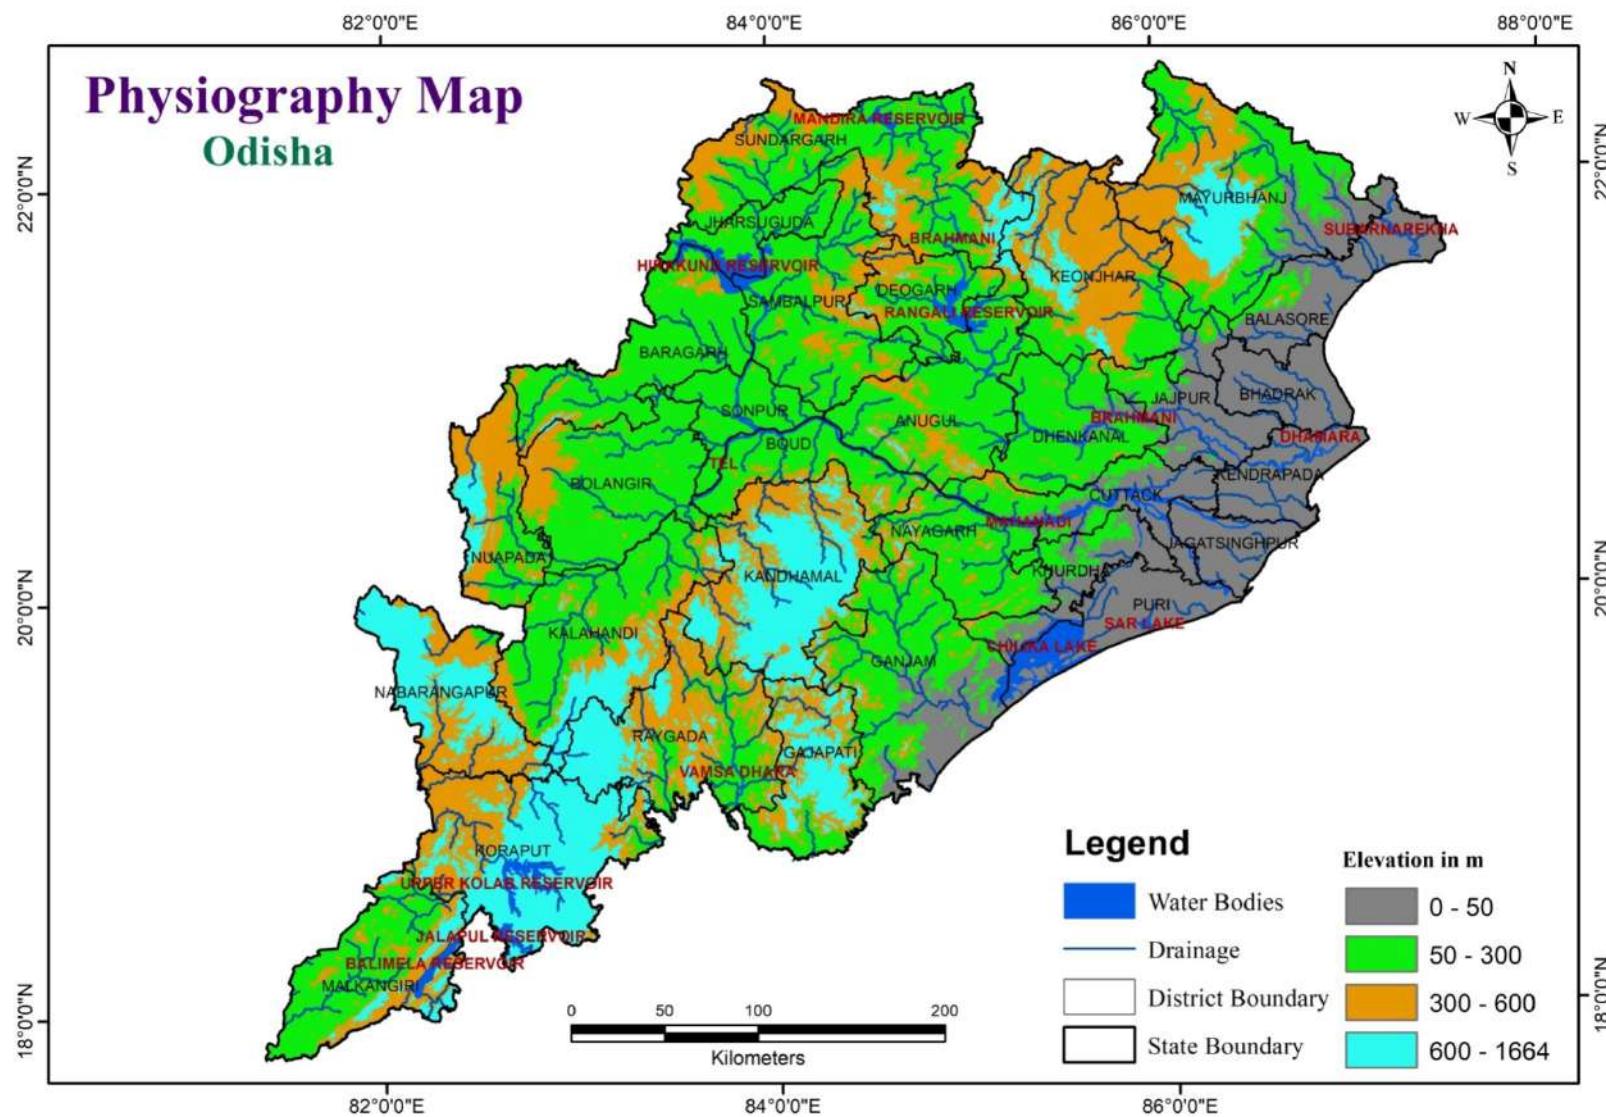

The coastal plains covering parts of Ganjam, Puri, Cuttack and Balasore districts from south to north form an extensive flat alluvial tract between the hills in the west and the coast in the east. It presents a flat topography gently sloping towards east with insignificant elevation difference. The general elevation of coastal plains varies from 1 to 10m above mean sea level (amsl).

Northern uplands covering Mayurbhanj, Keonjhar and Sundergarh districts and Pallahara subdivision of Dhenkanal district are undulating, frequently intersected by hill ranges with general slope from north to south. The elevation in the central part of the upland generally varies between 300 to 600 m and forms watersheds of Baitarani and Brahmani river systems. The erosional plains of Mahanadi river basin lie between the northern uplands and southern hilly region of the Eastern Ghats. The tract covers major parts of undivided districts of Sambalpur, Bolangir, Dhenkanal and northern parts of Kandhamal (Khandamal) and Western part of Puri districts. The altitude of this tract lies between 150 to 300 m above mean sea level (amsl).

Southwestern hilly region lies to the south and southwest of Mahanadi valley region stretching through Kandhamal, Ganjam districts and part of Koraput district. Major part of this region has an elevation over 600m, acting as the watershed of the two sets of rivers, one set flowing directly to the Bay of Bengal, namely Rushikulya, Nagavali and Vamsadhara and the others feeding the Godavari and Mahanadi river systems.

The plateaus extend throughout the western parts of Kalahandi, Nawapara, Koraput, Malkangiri , Rayagada and Nawarangpur districts with an average elevation varying from 300 to 600m above mean sea level (amsl).

PLATE:- 2.1

### 3.0 DRAINAGE

There are eleven principal rivers traversing the entire state that can be grouped under eight major river basins within the state, whereas the Indravati, Kolab, Machkund sub-basins in the south forms part of Godavari river basin. Most of the major rivers flow in easterly and southeasterly direction with gentle gradient. Generally the rivers are effluent in nature. In general the drainage pattern is of both dendritic and radial types. The river basin map of Odisha is presented in **Plate 3.1**. The salient features of the major river basins are given in **Table 3.1**.

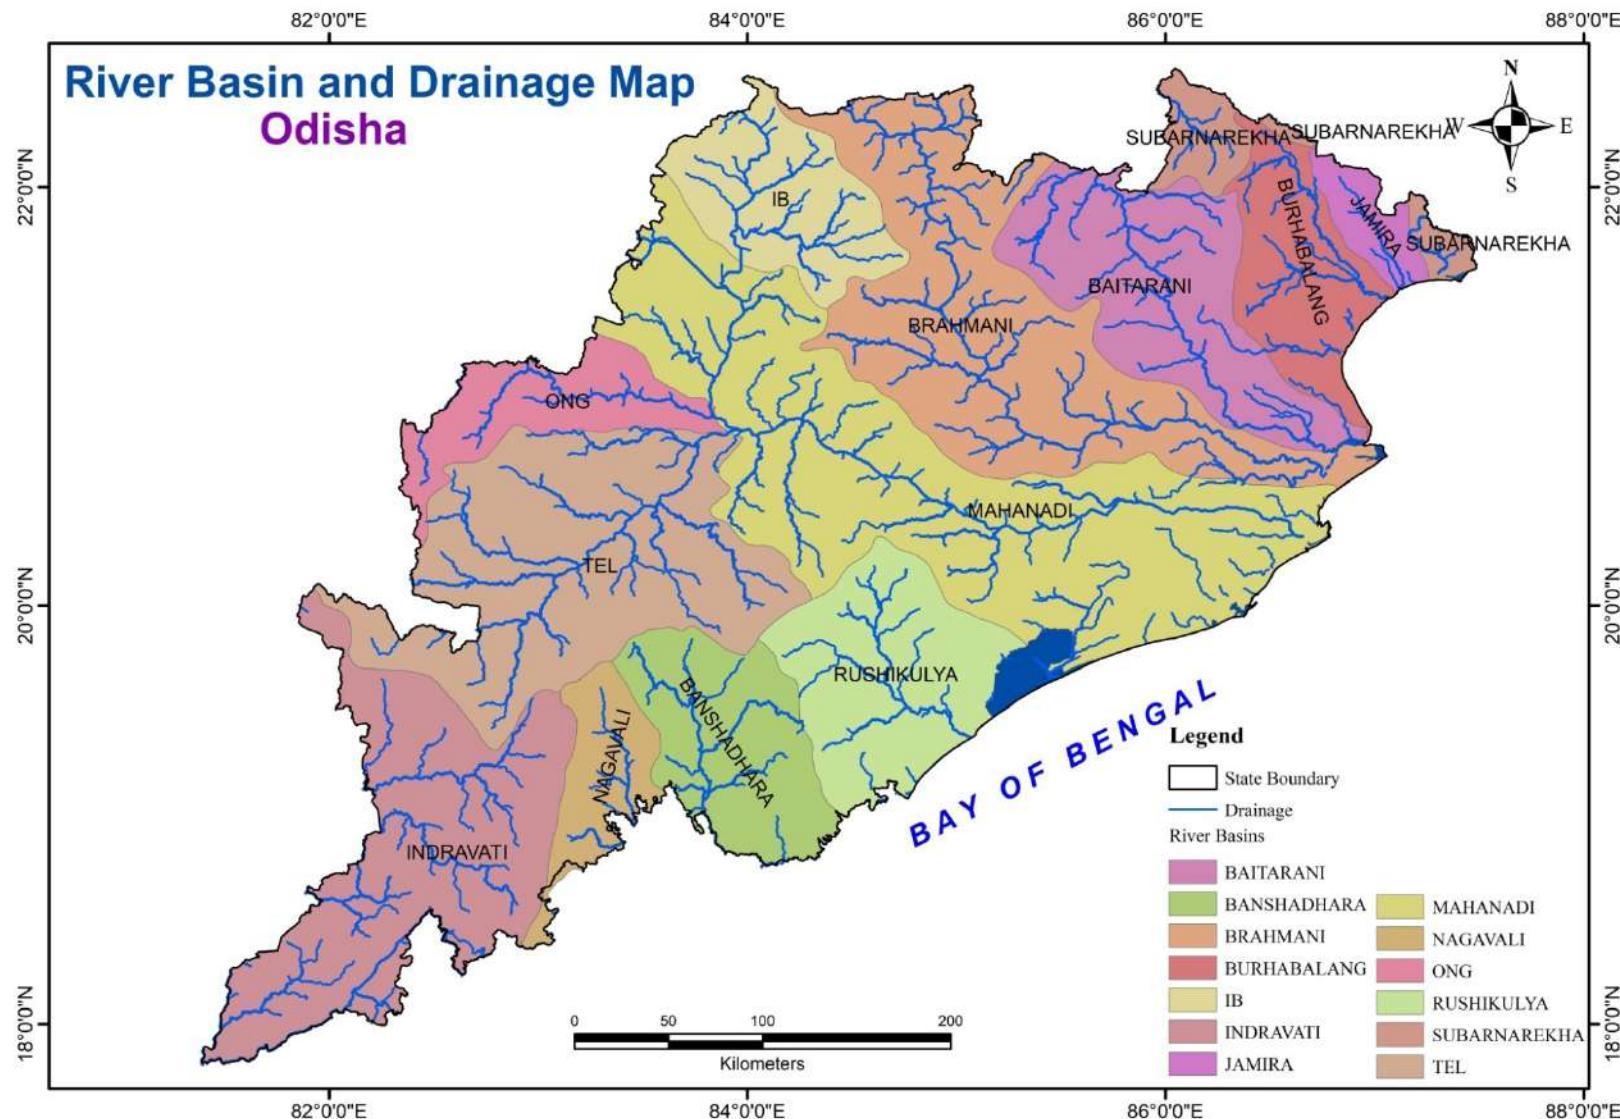

#### SALIENT FEATURES OF MAJOR RIVER BASINS

TABLE 3.1

River	Total Catchment Area (Sq Km)	Catchment Area In Odisha (Sq km)
Mahanadi	1,41,134	65,628
Brahmani	39,116	22,516
Baitarani	14,218	13482
Subarnarekha	19,277	2,983
Budhabalang	6,691	6354
Rusikulya	8,963	8963
Vamsadhara	11,377	8960
Nagavali	9,275	4500
Indravati	41,700	7,400
Kolab	20,427	10300
Bahuda	1118	890

## RIVER BASIN MAP OF ODISHA

PLATE:- 3.1

#### 4.0 CLIMATE AND RAINFALL

The state enjoys a sub-tropical climate with three distinct seasons i.e. summer, monsoon and winter. The southwest monsoon rain starts from mid of June and continues till mid of October. Summer season extends from March to early part of June and winter season spreads from November to February.

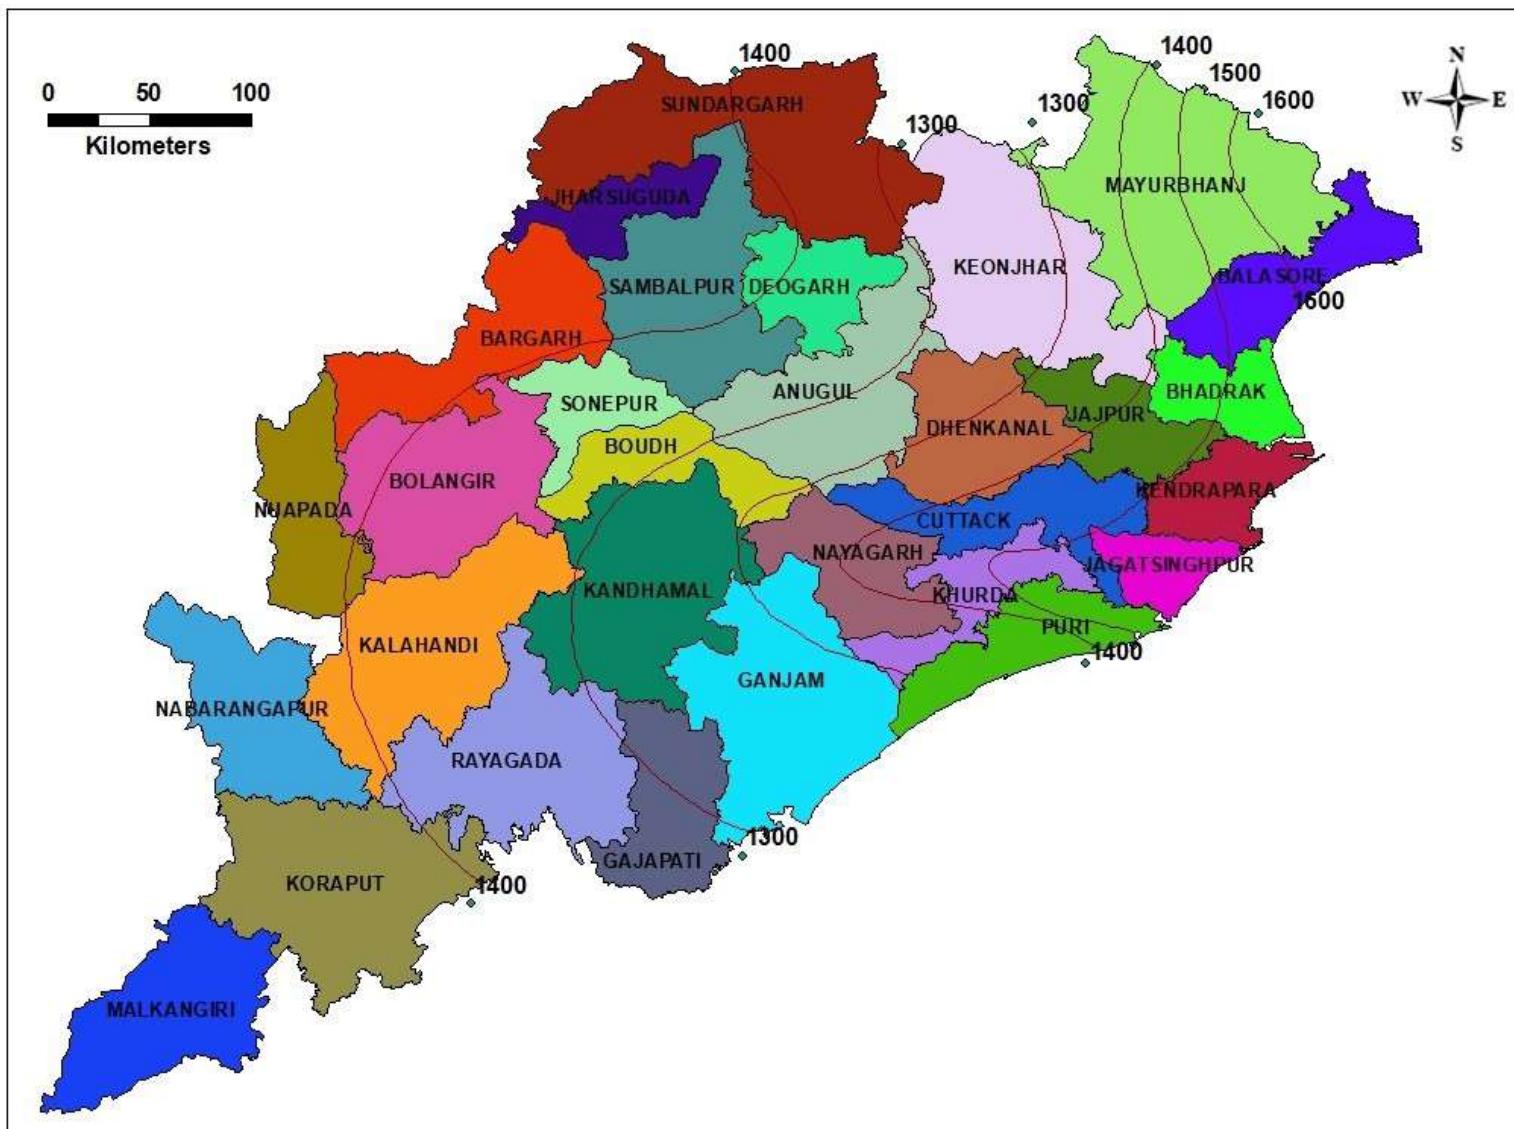

The normal average rainfall of the state is 1482.2mm . Nearly 86% of the annual rainfall is contributed by the southwest monsoon. The spatial distribution of the rainfall in the State is uneven and erratic. A perusal of the Isohyetal map of the normal rainfall for the period (**Plate – 4.1**) shows that the rainfall is highest in the northern part of coastal tract, which ranges from 1520.32 to 1697.87 mm. The rainfall reduces westwards, from 1487.02 to 1211.08 mm in Kandhamal, Angul, Keonjhar districts and also southwards to 1221.14 mm around Gopalpur in Ganjam district.

The rainfall ranges from 1331.85 mm to 1491.89 mm in Koraput, Kalahandi, Bolangir, Sambalpur and Sundergarh districts. The IMD rainfall data for from **2014-2023** has been given in **Table 4.1**. From the rainfall departure data, it can be observed that the year 1990, 1995 and 2003 indicate excess rainfall in the major part of the state. **Table 4.2** presents the drought, flood and cyclone years in the state from **1981 to 2023**. A perusal of the table indicates that every alternate year, the state experiences a natural calamity in the way of drought or flood or cyclone. This has created a most unpredictable climate for any agricultural activity in the state.

The state experiences hot summer with temperatures shooting up to 45°C in the east to 50°C in the west. During winter season mornings and nights are cool. However the mean monthly winter temperature varies from 18°C to 22°C in different parts of the state. The mean monthly summer temperature is 37°C in western parts and 28°C in southern parts. Humidity ranges from 70% to about 100% in the state. During monsoon period the humidity is very high in the eastern parts and during summer it is dry in the western part of the state.

## **5.0 HYDROGEOLOGICAL CONDITION**

Geological setting, climate and topography plays a vital role in occurrence and movement of groundwater. The state is underlain by diverse rock types, which range in age from Precambrian to Cenozoic. The Precambrians occupy nearly 80% of the total geographical area of the state. The Tertiary and the Quaternary formations are restricted mainly to the narrow coastal tracts. The Gondwana group of rocks belonging to Paleozoic and Mesozoic age occur in isolated patches in different parts of the state. These formations occur in Talcher area of Angul district and Ib river valley area of Sambalpur and Sundergarh districts. Hydrogeologically, the state can broadly be divided into 3 distinct geological units. The aquifer system of the state has been depicted in **Plate 5.1**.

### **Area with Precambrian Consolidated Formations –**

Sundergarh, Keonjhar, Mayurbhanj, Subarnapur, Bolangir, Kandhamal, Boudh, Gajapati, Nuapara, Kalahandi and parts of Nayagarh, Khurda, Balasore, Cuttack, Ganjam, Koraput, Kalahandi, Angul, Dhenkanal, Sambalpur and Bargarh districts.

### **Area with Semi-consolidated Gondwana & Tertiary Formations –**

Parts of Sundergarh, Mayurbhanj, Angul, Dhenkanal, Khurda, Sambalpur, Kandhamal and Bolangir districts.

### **Area with Unconsolidated Quaternary Formations –**

Coastal tracts of Puri, Khurda, Cuttack, Jagatsinghpur, Jajpur, Kendrapara, Balasore, Bhadrak, Ganjam districts and inland river valleys.

## **5.1 CONSOLIDATED FORMATIONS**

The consolidated formations include the hard crystalline and partly metamorphosed compact sedimentary formations belonging to Pre-Cambrian. The rock types are mainly granites, granite gneisses, schistose rocks, khondalites, charnockites, quartzites, calcsilicates, shale, phyllite, sandstone, limestone, marble etc. These rocks are devoid of primary porosity. The ground water occurs in secondary porosity resulting from weathering fracturing and jointing. The hard rock aquifers exhibit considerable variation laterally as also in depth. The weathered mantle is composed of loose regolith with intergranular porosity, which facilitates free circulation of ground water through deeper fractures

and forms potential repository of ground water. In general the average thickness of weathered residuum varies from 15 to 20 m. Ground water occurs under phreatic condition. The water bearing fracture zones generally occur within 100m depth but deeper potential fractures have also been encountered in some of the bore holes drilled by the Central Ground Water Board.

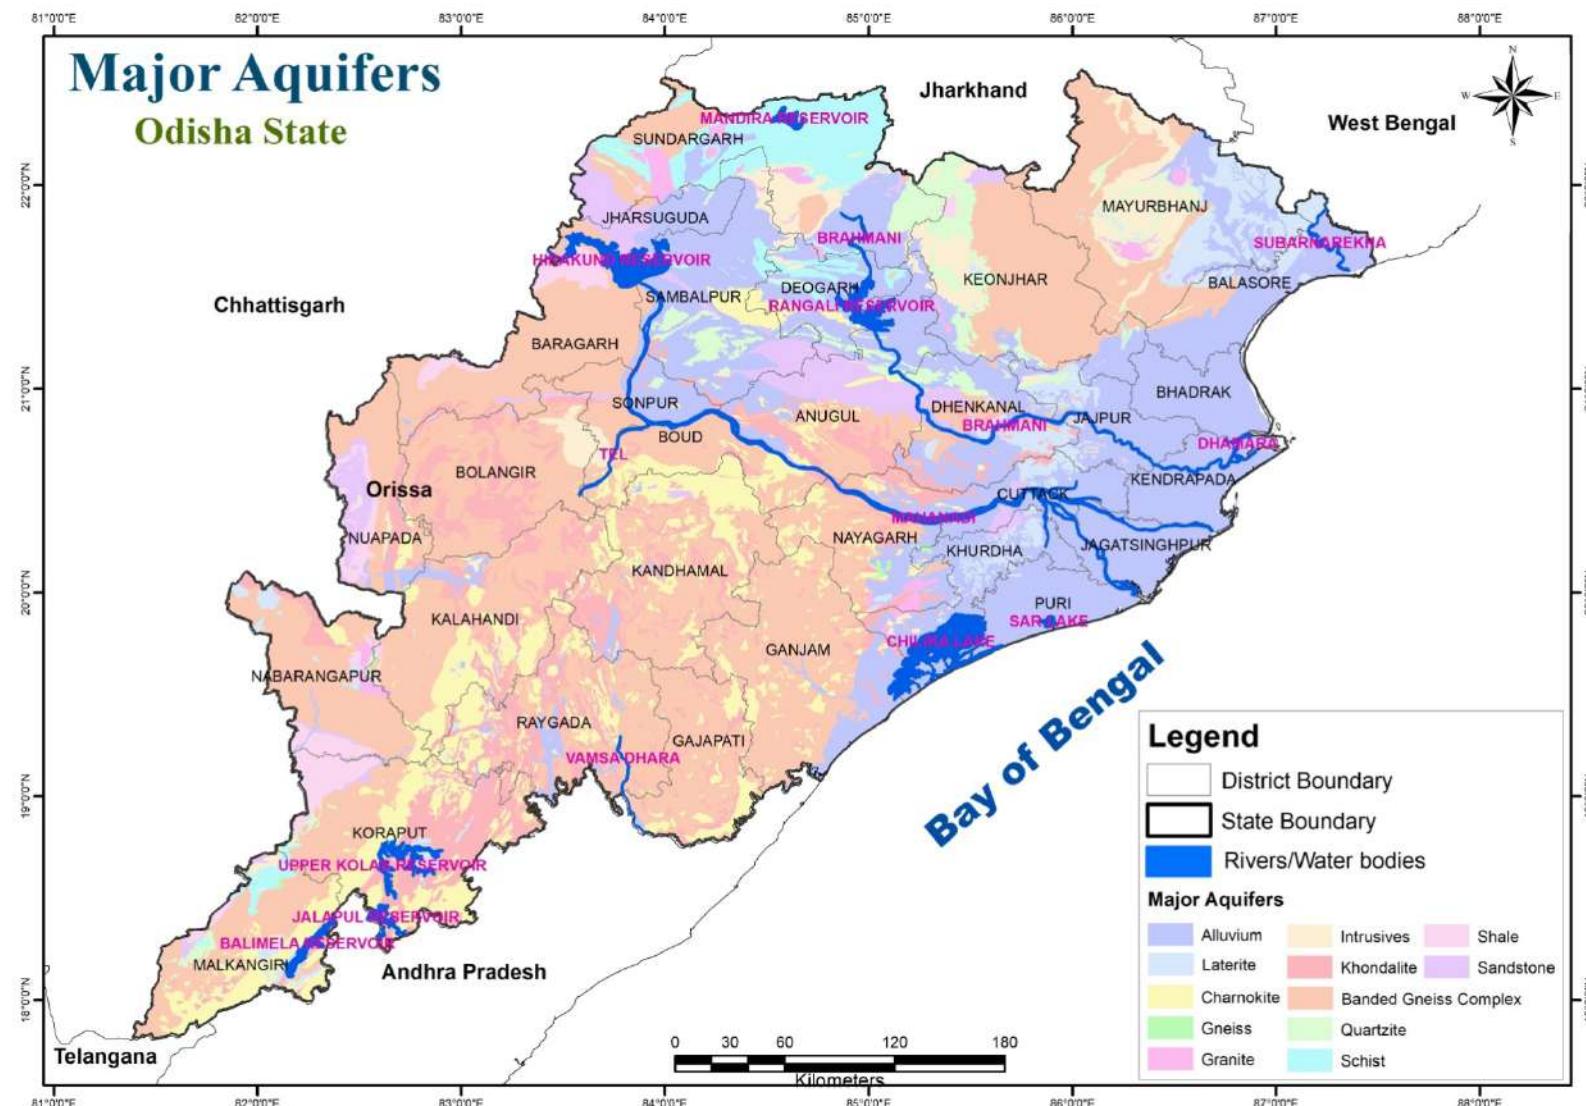

## **5.2 SEMI CONSOLIDATED FORMATIONS**

The semi-consolidated formations include Gondwana sedimentaries ranging in age from Upper Carboniferous to Cretaceous and the Baripada beds of Middle-Pliocene age. The Gondwanas include sandstones, shales, siltstones and conglomeratic beds, while the Baripada beds consist of fossiliferous limestones, stratified semi-consolidated sand beds with intercalated shales. The coarse to medium grained, weathered, fractured and friable Gondwana sandstones and the semi-consolidated sand beds of Baripada formation form the aquifers. The ground water occurs under water table condition in the shallow aquifers and under semi-confined to confined conditions in the deeper aquifers. The depth of weathering in Gondwanas generally extends to a depth of 15m.

## **5.3 UNCONSOLIDATED FORMATIONS**

The unconsolidated sediments include Pleistocene and Recent alluvium. The older alluvium, which forms conspicuous and significant horizon, is generally overlain by laterites. The laterites are vesicular, essentially ferruginous and form the shallow aquifer. Maximum development of alluvial formations occurs along the coastal tract, with a maximum thickness of about 600m. Alluvium also occurs as discontinuous patches adjoining the river courses, where the thickness is limited to about 45m. The sand and gravel layers act as good repository of ground water. Groundwater occurs under unconfined condition in the shallow zone and under semi-confined to confined condition in the deeper zone. The coastal tract holds potential for large- scale ground water development as the sand zone forms prolific aquifers. But the coastal tract is beset with salinity problems both in shallow as well as deeper aquifers at different locales at different levels.

**AQUIFER SYSTEM OF ODISHA**  
**PLATE:- 5.1**

## 6.0 GROUND WATER REGIME MONITORING

Ground water monitoring is carried out by CGWB through a network of observation wells (dug wells and piezometers) spread all over the state. These wells serve as permanent National Hydrograph Stations (NHS). The existing network provides an optimal spatial distribution of observation stations in the region, through which necessary information on ground water regime is available with a fair degree of accuracy. Through interpolation between data sets at different stations, it is possible to determine the characteristics of elements at any point in the region. Under normal circumstances, the water level of the observation wells are being measured four times in a year during fixed period of time as given below –

April	– 20 <sup>th</sup> to 30 <sup>th</sup> of the month	Represents water level situation in Pre-monsoon period
August	– 20 <sup>th</sup> to 30 <sup>th</sup> of the month	Represents peak water level of monsoon period.
November	– 1 <sup>st</sup> to 10 <sup>th</sup> of the month	Represents situation of water level in Post-monsoon period.
January	– 1 <sup>st</sup> to 10 <sup>th</sup> of the month	Represents water level during irrigation period.

### 6.1 DISTRIBUTION OF NATIONAL HYDROGRAPH STATIONS

A total number of 1750 Hydrograph Network Stations have so far been established and are being monitored in the state. Out of 1750 network hydrograph stations, open/dug wells are 1483 in numbers and 267 are Piezometers in hard rock and coastal tract (including piezometers under Hydrology Project) and are being monitored manually. The district wise NHS wells monitored in different season is furnished in **Table 6.1**. Locations of hydrograph network stations are shown in **Plate-6.1** and the general details of hydrograph network stations are given in Annexure-1.

### 6.2 ANALYSIS OF DATA

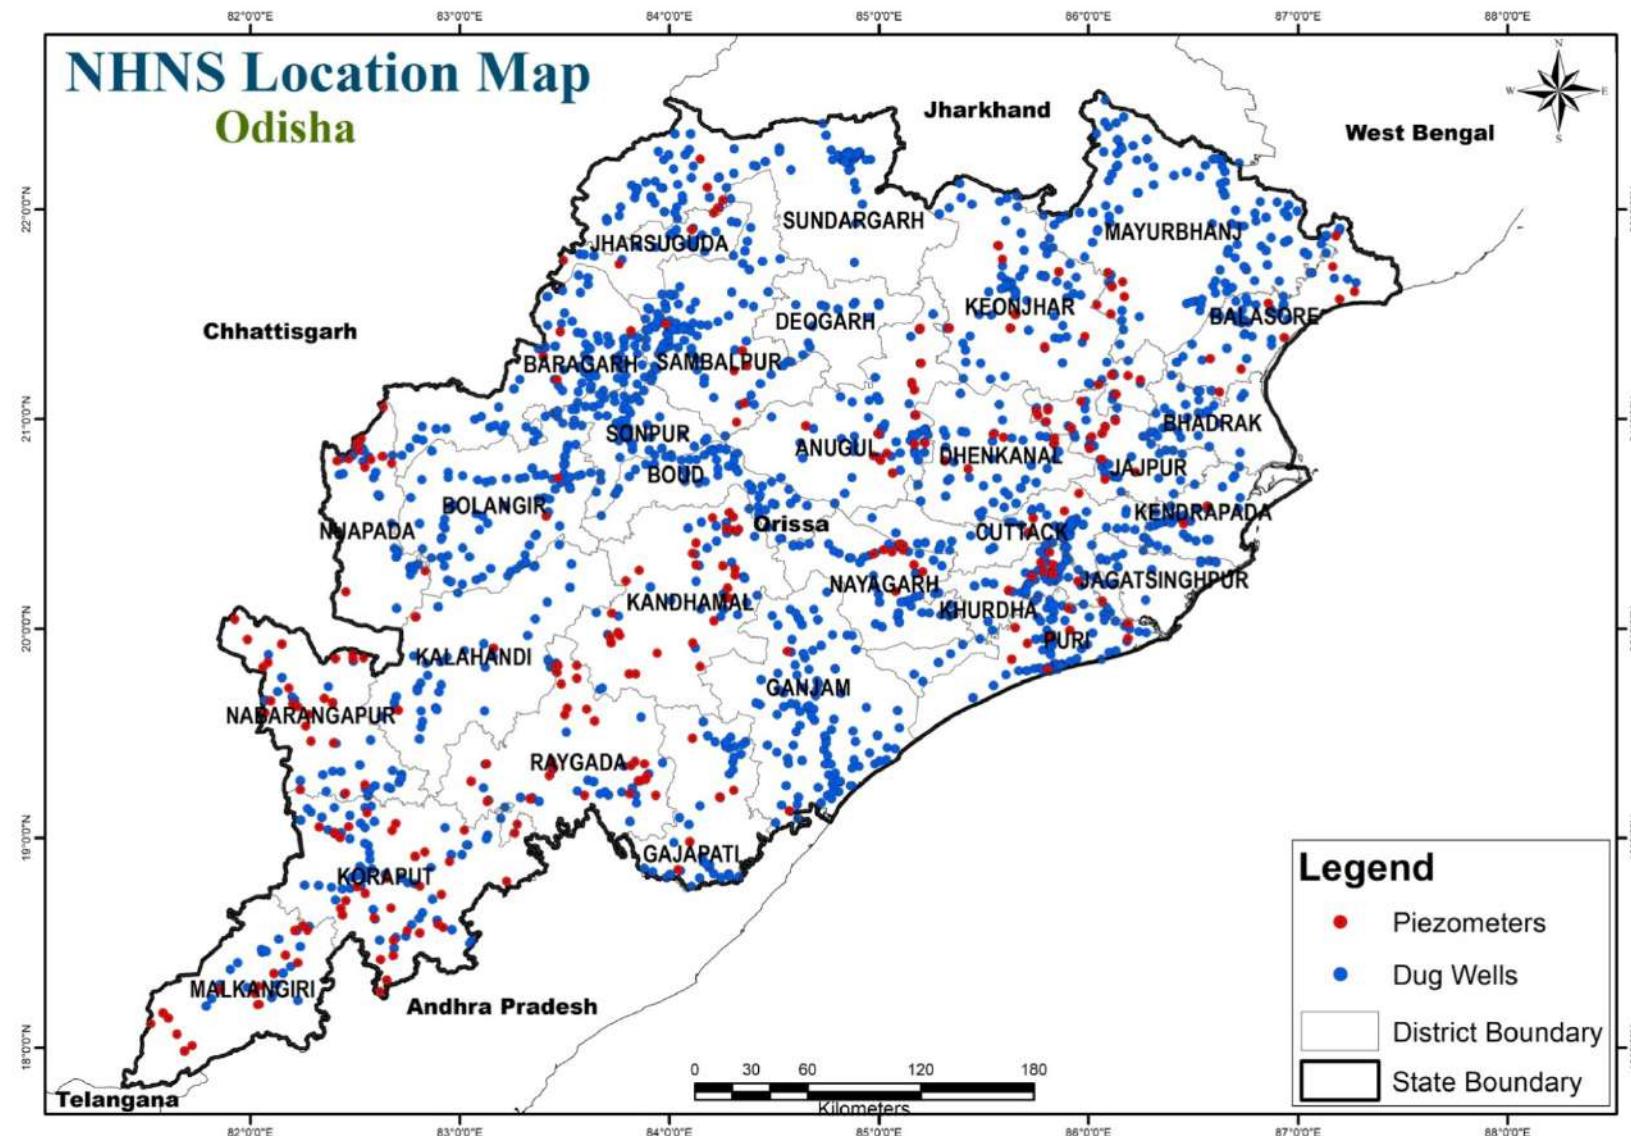

The water levels reflect the cumulative effect of natural recharge discharge conditions and ground water draft on the ground water regime. Where the draft exceeds the recharge, its manifestation is reflected by distinct decline in normal water level and where recharge is more than the draft rising trend is seen in water levels. The hydrographs given in **Plate 6.2** show the periods of recharge and discharge. Water level data collected four times a year is subjected to analysis for inferring the change in water levels i.e. rise/ fall and trend in water levels with reference to time and space.

## LOCATIONS OF NATIONAL HYDROGRAPH NETWORK STATIONS IN ODISHA

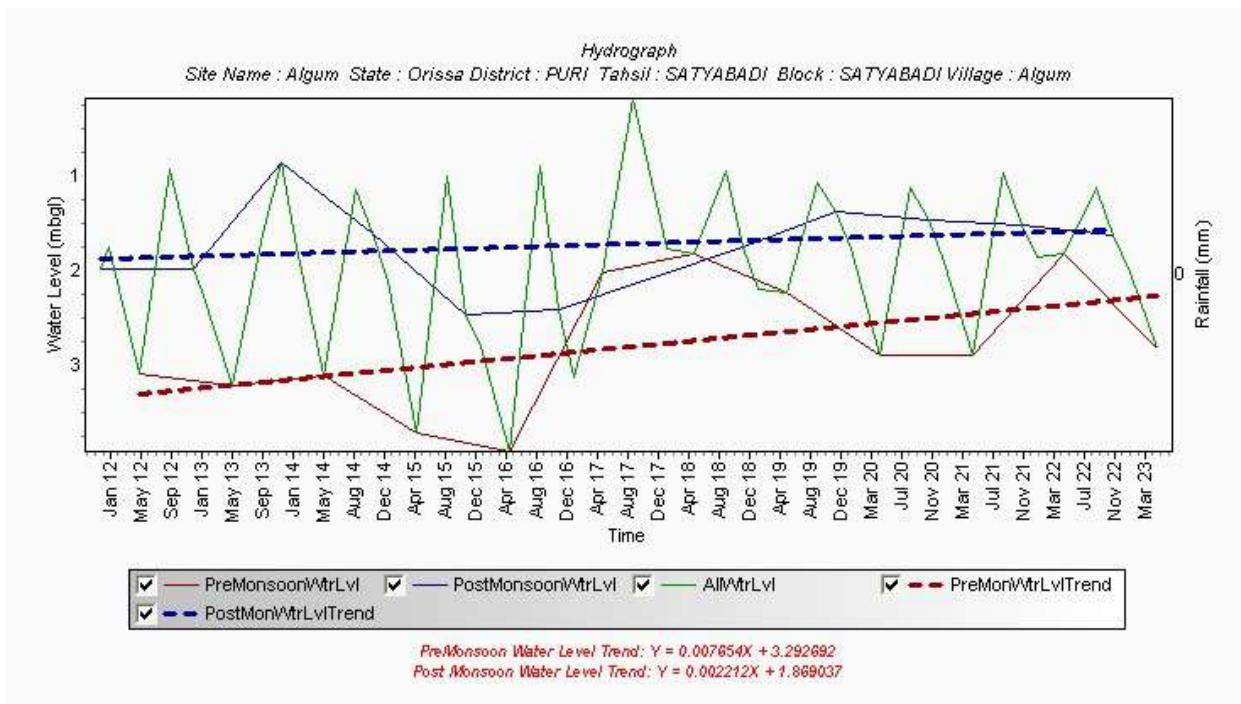

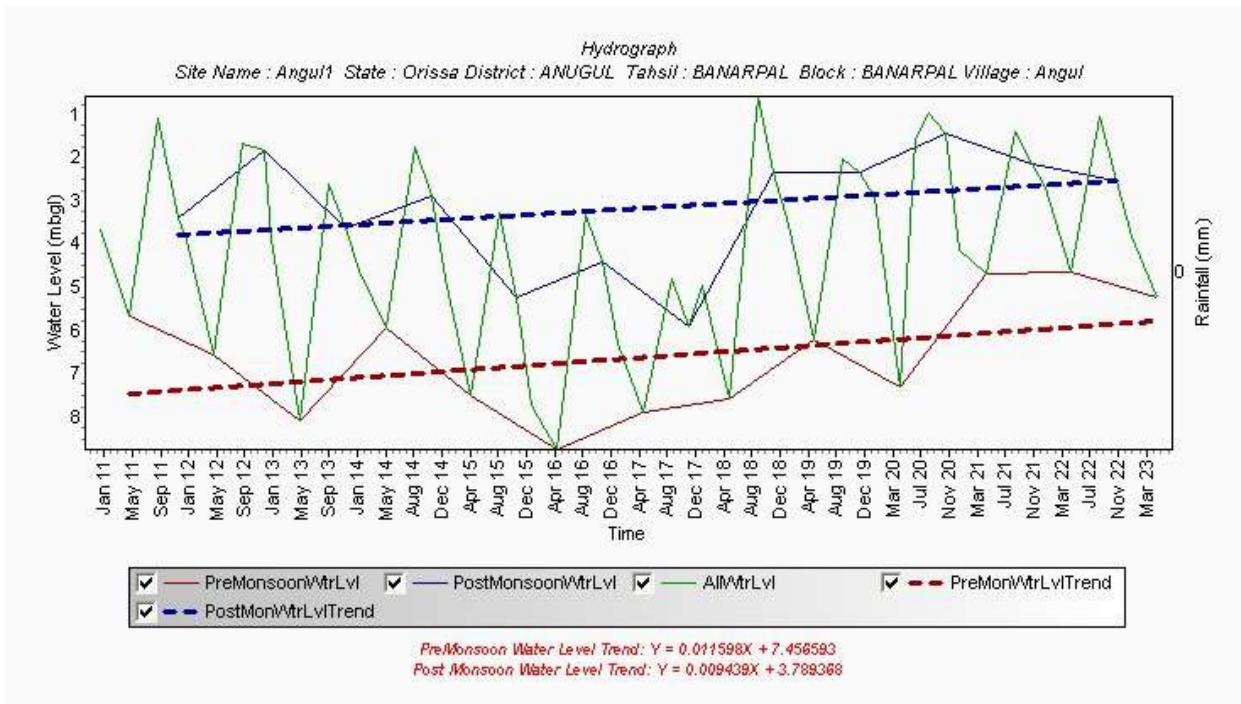

PLATE 6.1

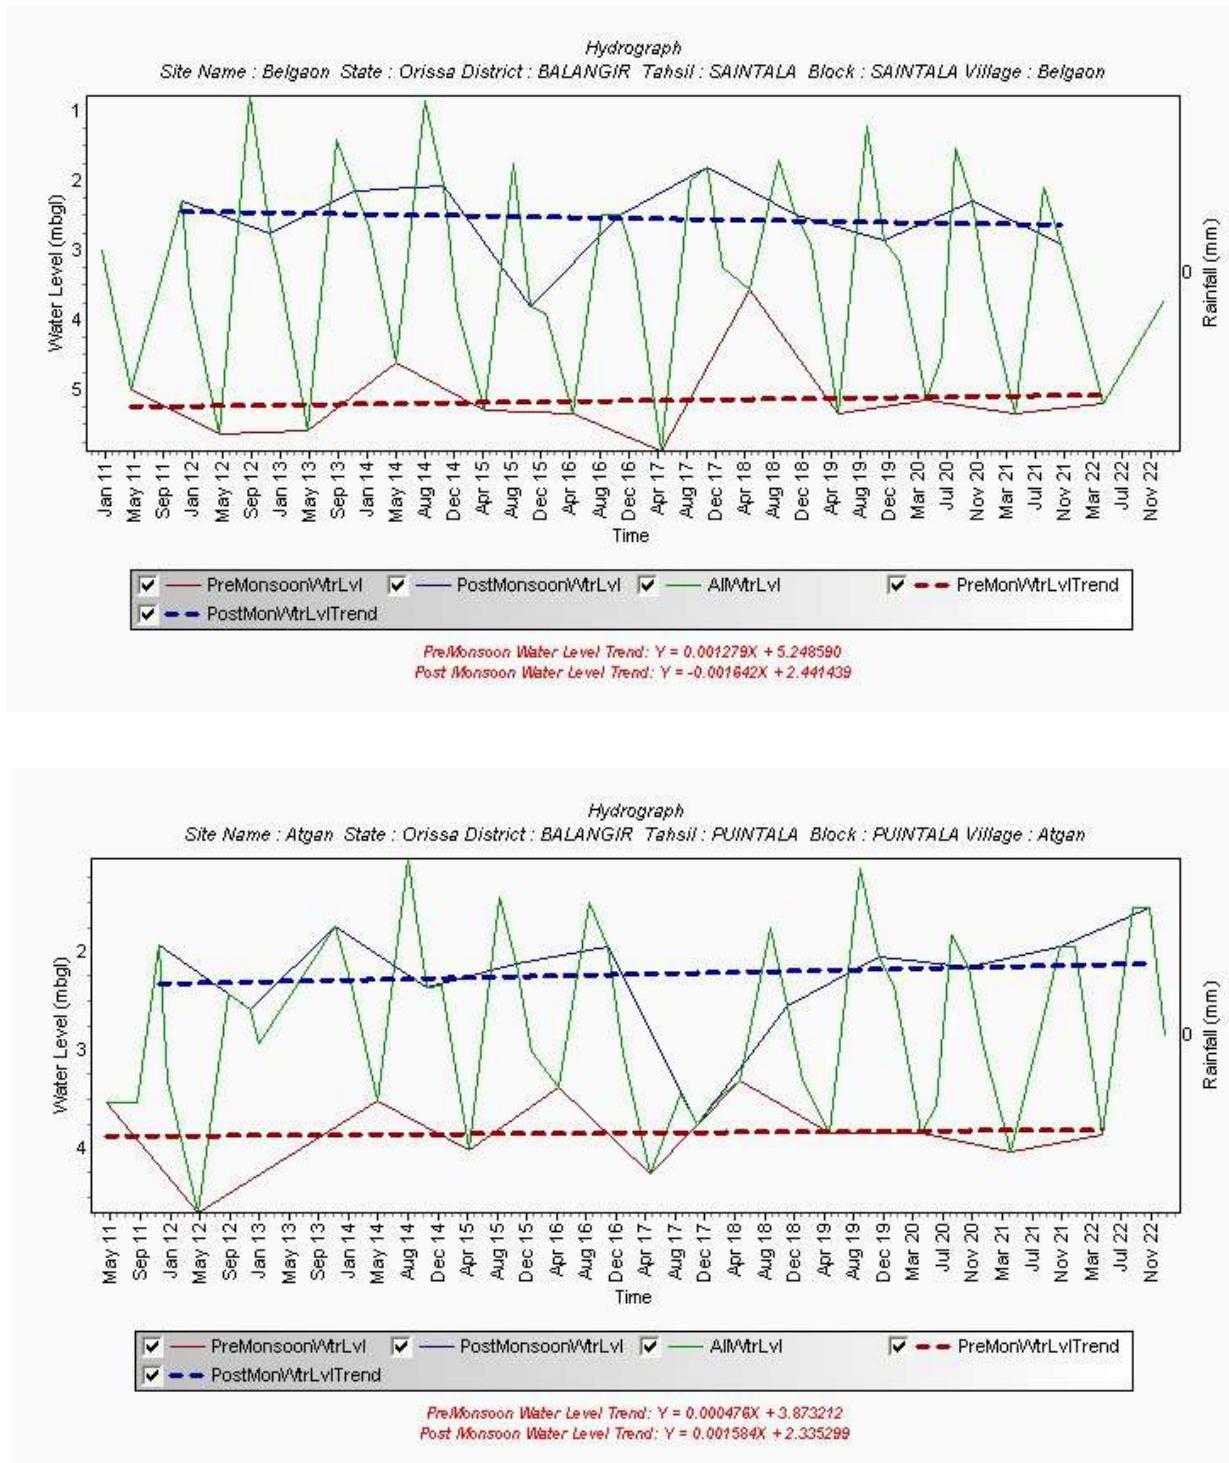

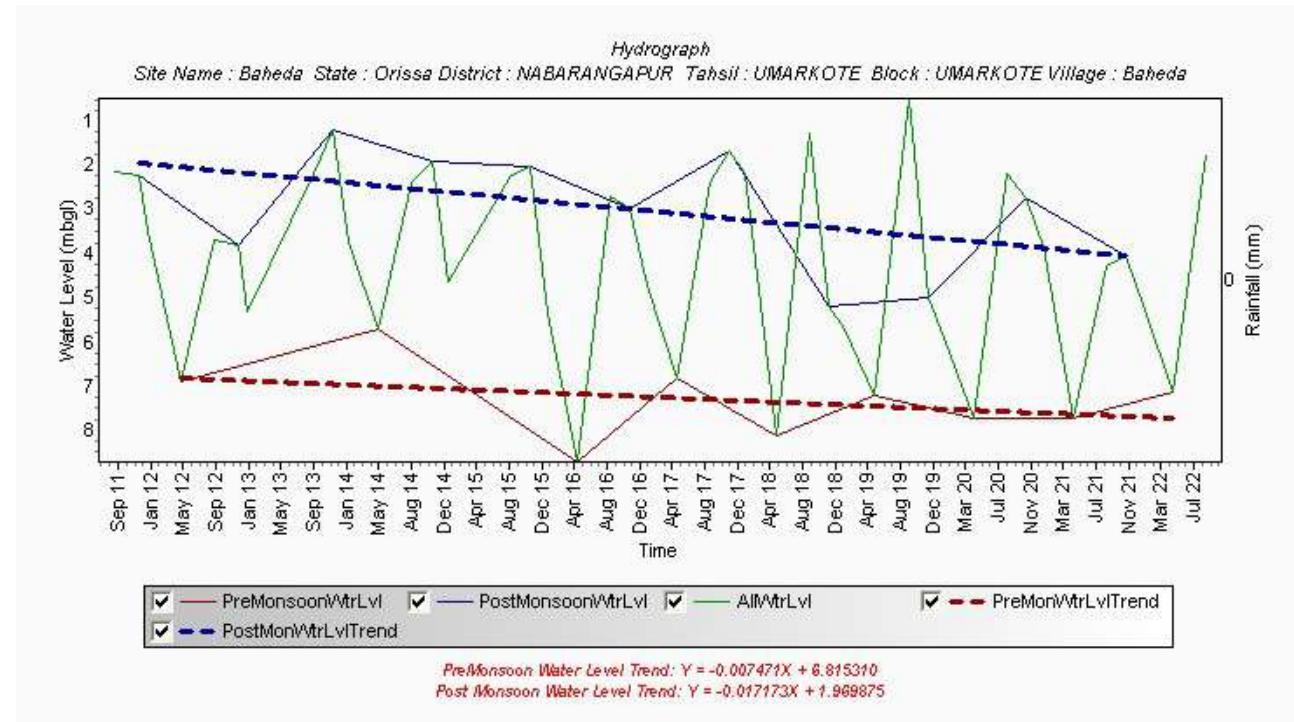

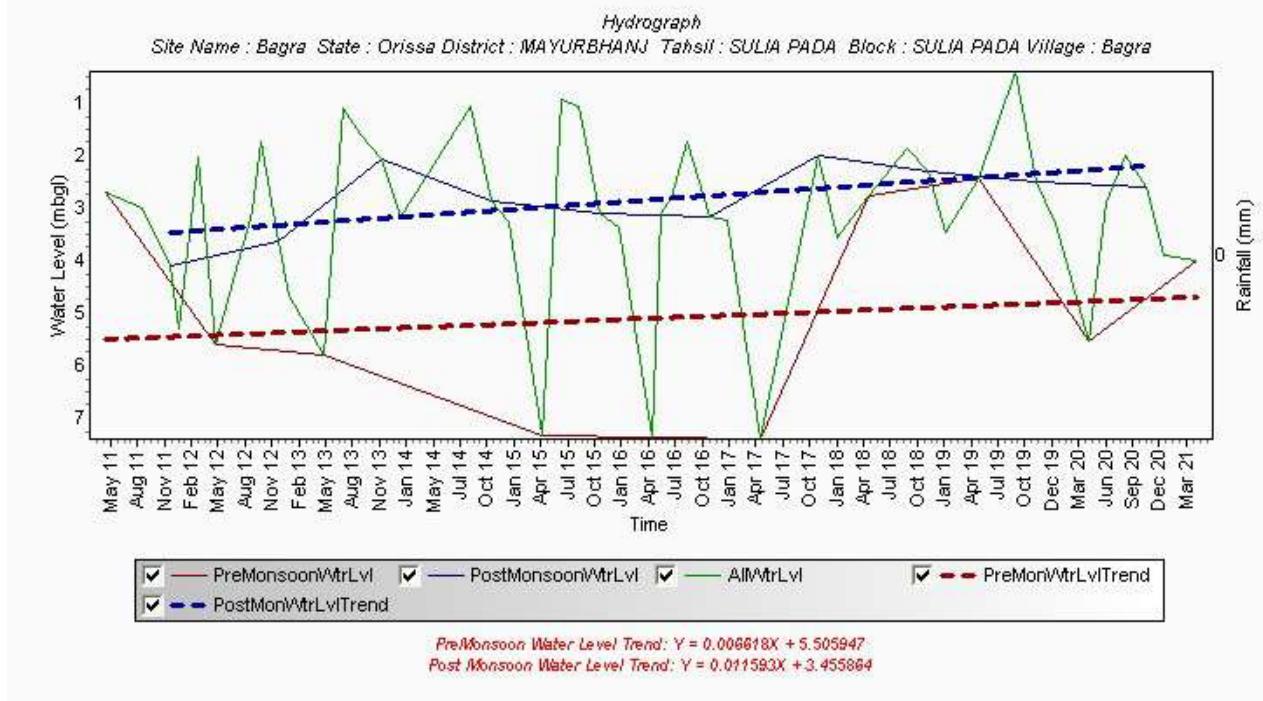

## 6.2 HYDROGRAPH ANALYSIS

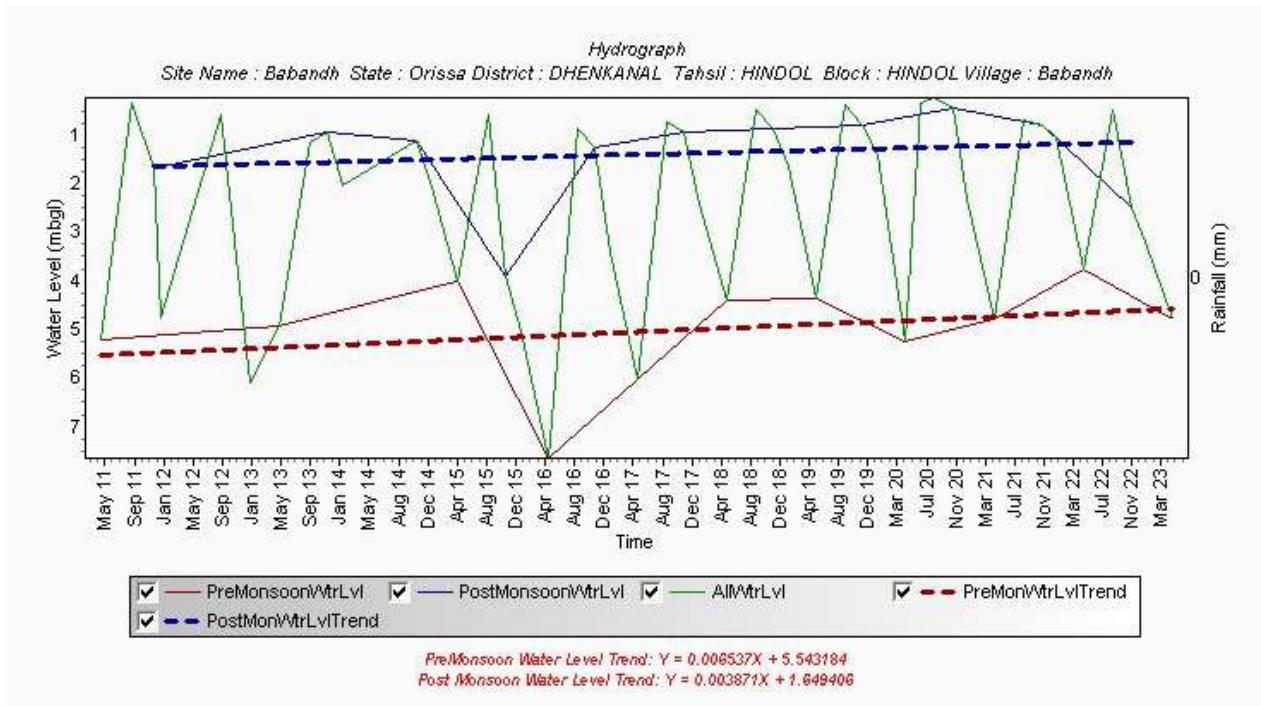

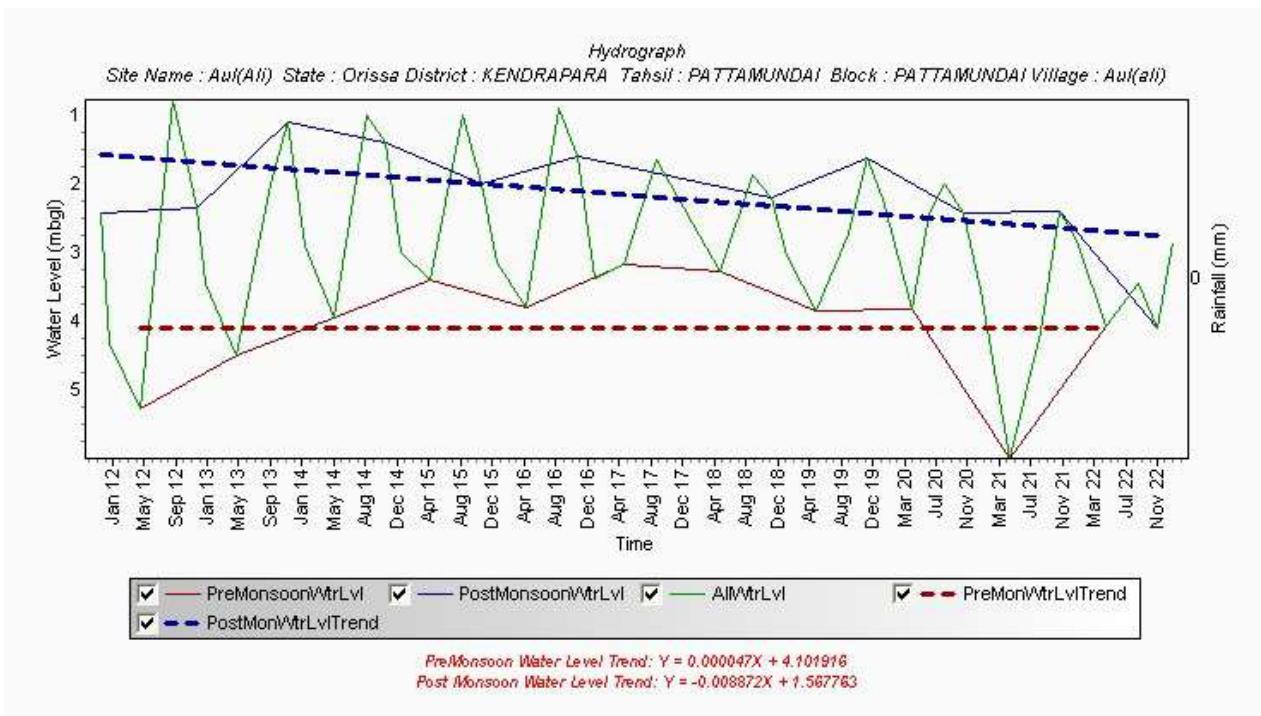

### Long Term Water Level Trend Analysis

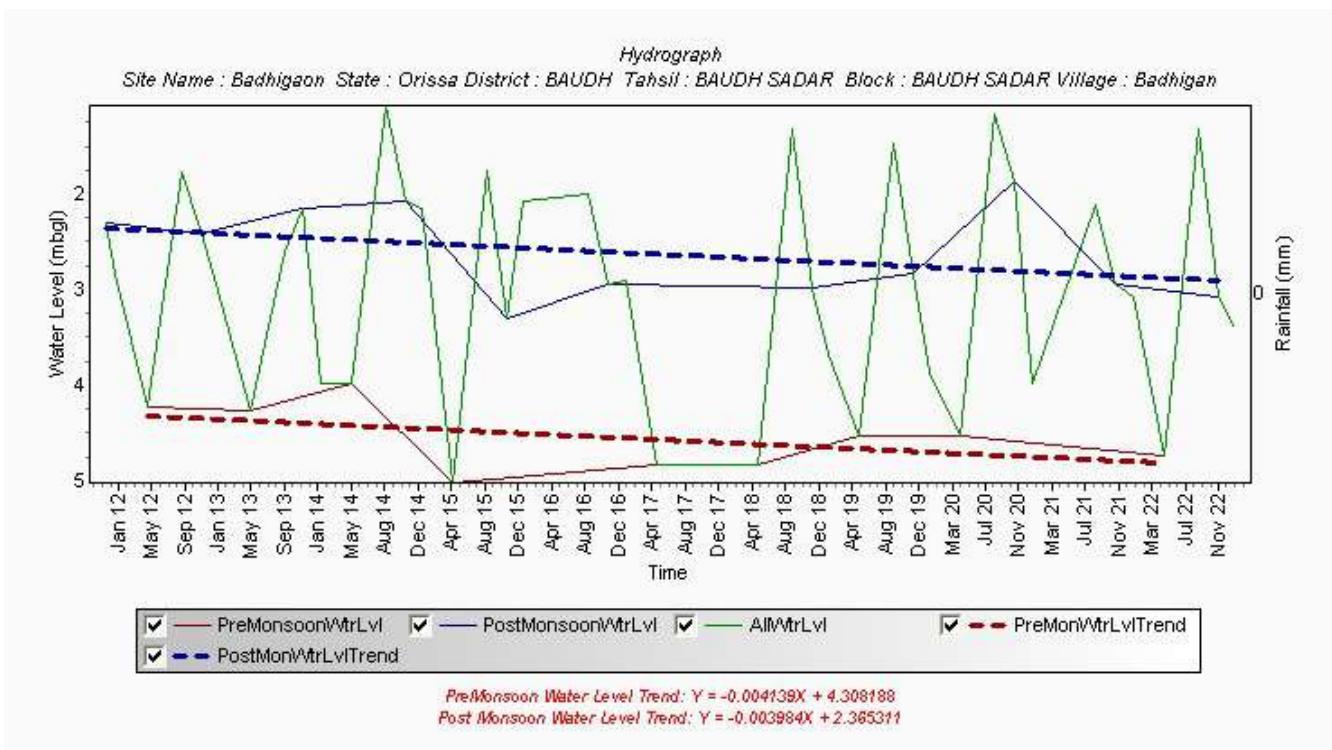

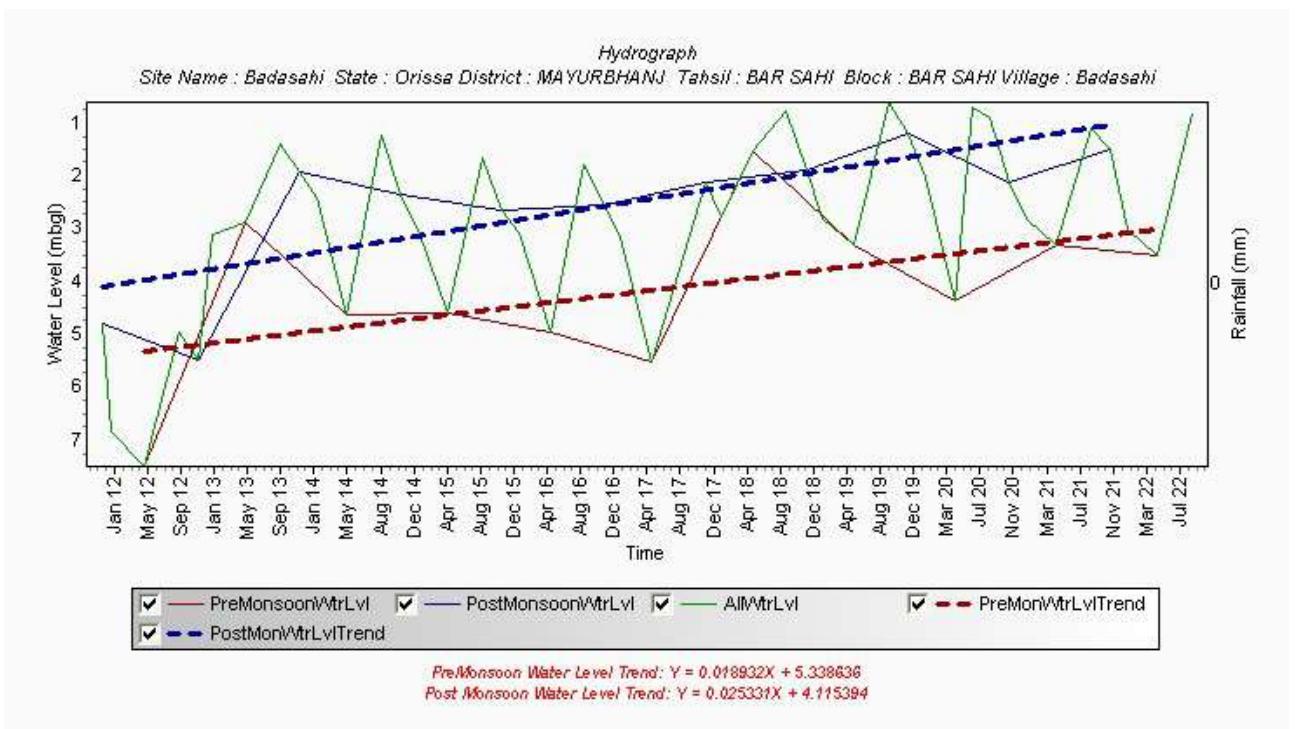

Hydrographs with Long term water level trend and comparison is given in **Plate 6.3**

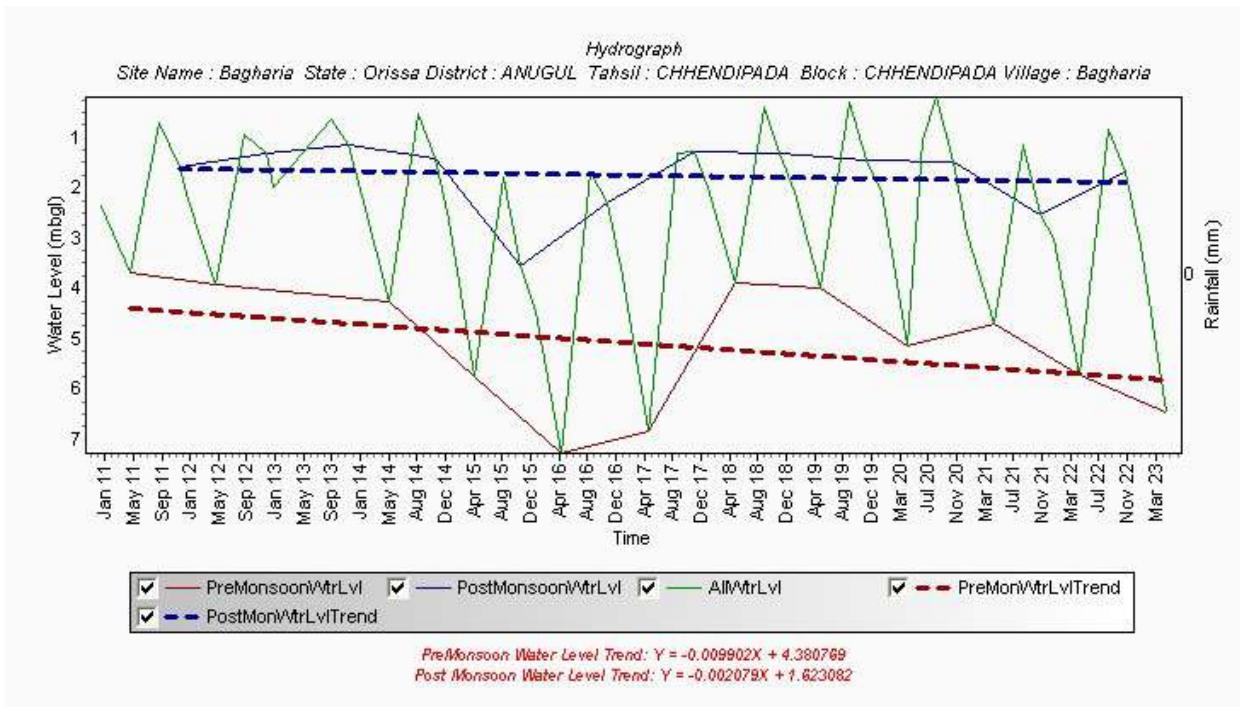

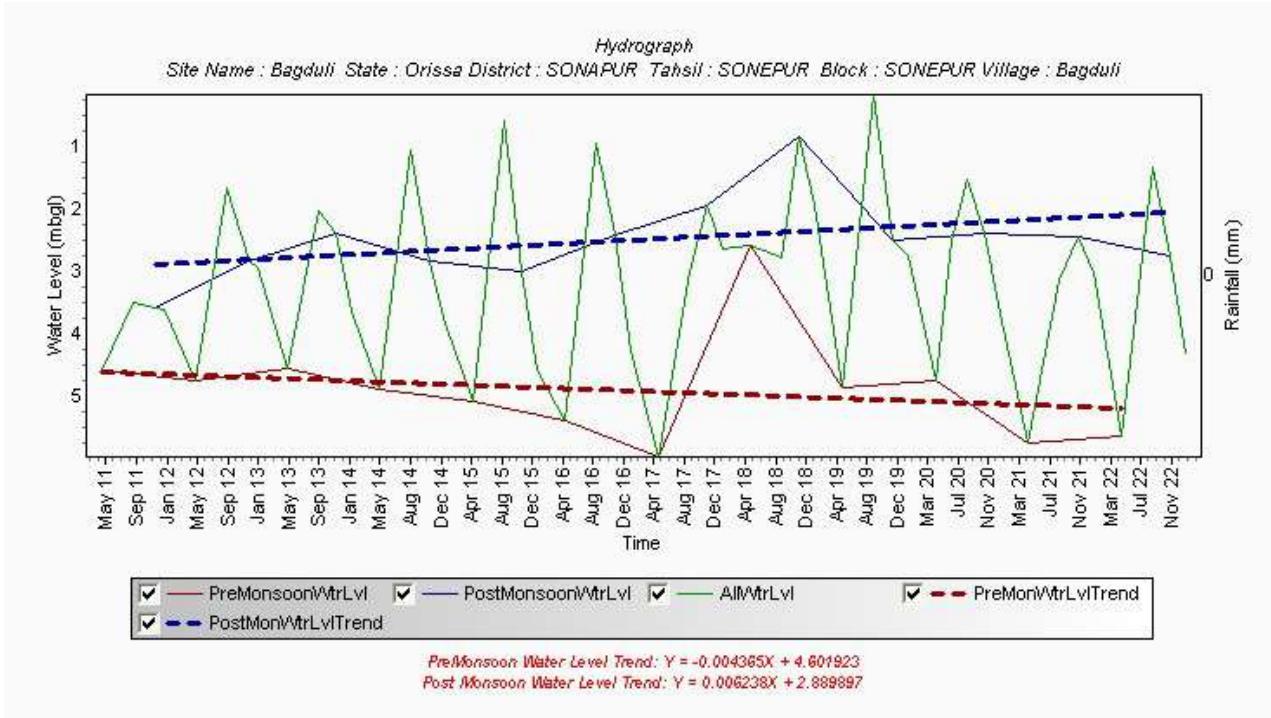

## **7.0 BEHAVIOUR OF WATER LEVEL DURING 2023– 2024**

During 2023- 2024 the existing 1750 National Hydrograph stations were monitored four times and behaviour of the ground water regime during the year was inferred comparing the same with the decadal mean, corresponding previous year data and pre-monsoon water level data. On the basis of water level data of NHNS, for each measurement the following maps have been prepared.

1. Depth to water level for each measurement
2. Water level fluctuation in comparison to corresponding period of previous year.
3. Comparison of water levels to Pre-monsoon water levels.
4. Water level fluctuation in comparison to decade average.

### **7.1 DEPTH TO WATER LEVEL**

#### **7.1.1 DEPTH TO WATER LEVEL OF APRIL 2023**

During April 2023, the water level (meter below ground level) in the state varies from minimum of 0.01 mbgl in Nayagarh district to a maximum of 16.05 mbgl in Mayurbhanj district and water levels mostly range from 2 to 10 mbgl. The depth to water level map has been shown in **Plate-7.1** and district wise well frequency for different ranges of depth to water level are given in **Table- 7.1**.

#### **Water level between 0-2 m**

Only 8.37 % of the NHS wells recorded water level in this range during April 2023. This range generally appears as small and isolated patches. Also this range is seen in isolated patches in Canal command areas of Bargarh, Bhadrak, Cuttack, Khordha, Jagatsinghpur, Kalahandi, Puri, Rayagada, Malkangiri, Baleshwar, Jagatsinghpur, Sambalpur and Sonapur districts with maximum 29.41% of wells in Bhadrak district.

#### **Water level between 2-5 m**

45.35% of the NHS wells have shown water level in this range of 2–5 mbgl. All the districts have recorded water level in this range. The districts which has the maximum number of wells showing this range of water level i.e., Jajapur (67.65%), Jagatsinghpur (77.78%), Kendrapara(95.65%), Puri (70.00%) and Ganjam (75.56%). The

major command areas of the state like Hirakud, Mahanadi, delta stage I & II, Baitarani, Salandi and Anandpur have shown water level in this range.

### **Water level between 5-10 m**

43.63% of the total NHS wells recorded water level in this range during April 2023. All the districts have recorded water level in this range. The hard rock and hilly terrains of the state has recorded water level in this range in majority of wells. The maximum percentage of wells in this range is recorded in Anugul (76.09%), Dhenkanal (72.22%), Debagarh (70%), Mayurbhanj (66.30%), Kendujhar (62.50%), Nuapada (56.25%), Kalahandi (56.67%), Baudh (60%), Balangir (57.89%) and Jharsuguda (58.33%) district.

### **Water level between 10-20 m**

Only 2.66% of the wells of the state fall in this category. It is mostly in the hilly districts like Koraput (7.02%), Mayurbhanj (13.04%), Nabarangapur (18.60%), Kendujhar (10.71%), Dhenkanal (5.56%).

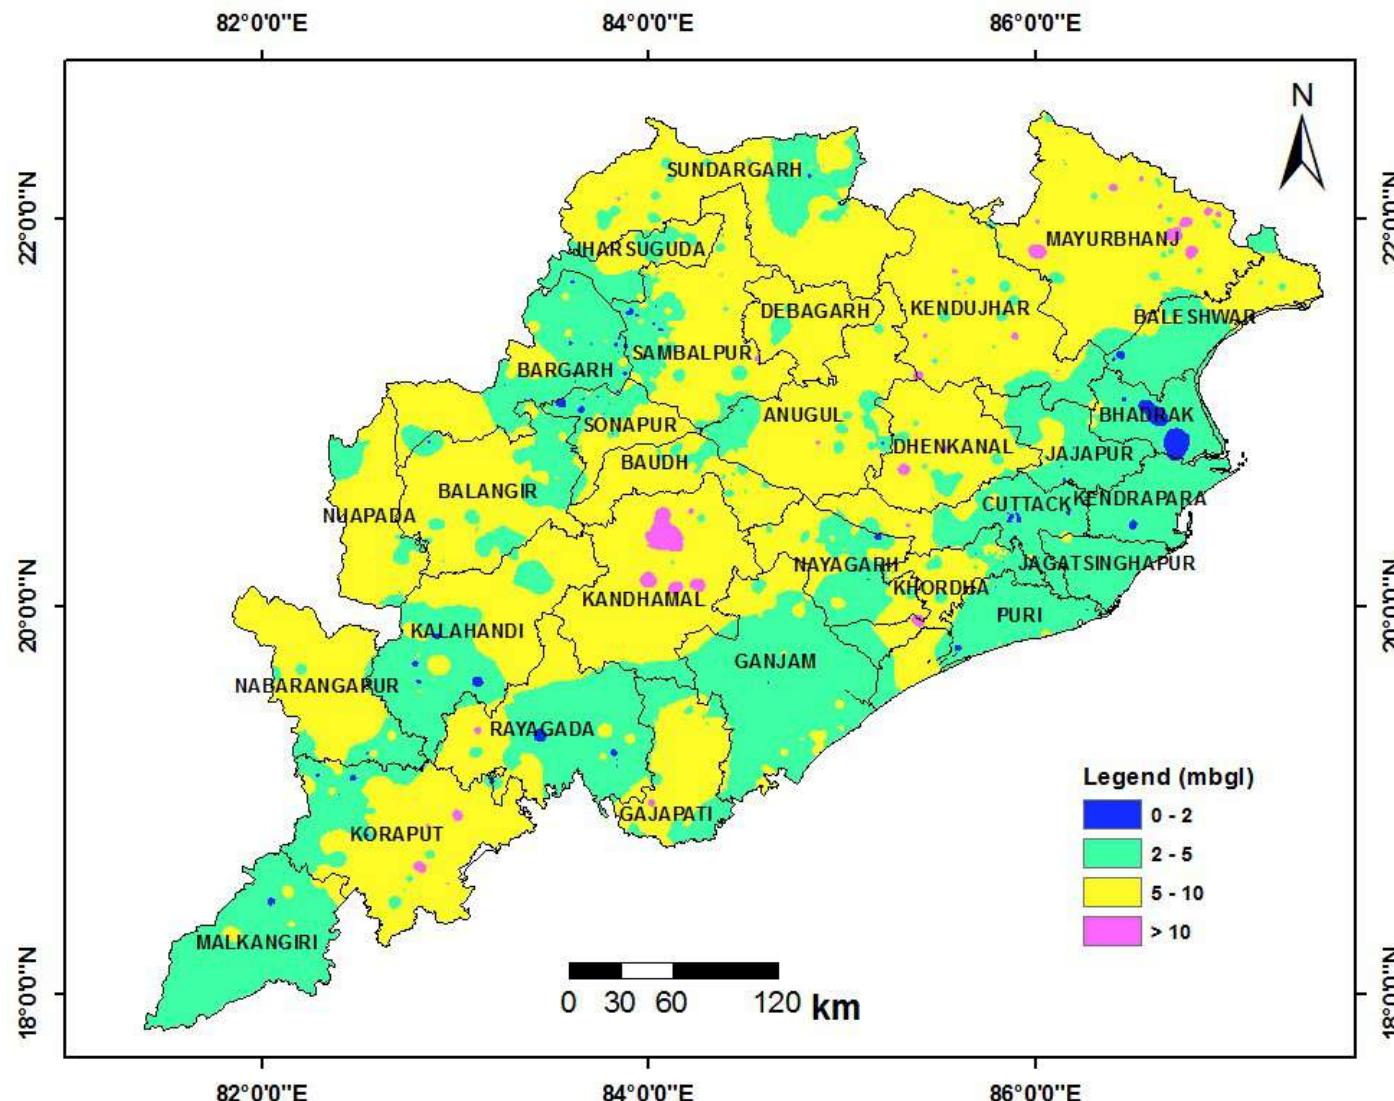

### **Water level more than 20m**

No well have shown more than 20 m of water level during April 2023.

In general, it can be said that during the month of April 2023, the state recorded water level in 2-10 m range in almost all the districts. Some wells in the hilly districts recorded water level in 10-20 m.

## DEPTH TO WATER LEVEL MAP- APRIL 2023

PLATE-7.1

**DEPTH TO WATER LEVEL AND FREQUENCY DISTRIBUTION OF MONITORING WELLS- APRIL- 2023**

### **7.1.2 DEPTH TO WATER LEVEL OF AUGUST 2023**

A perusal of data and maps pertaining to August 2023 shows that the depth to water level ranges from 0.01 to 11.35 mbgl and in majority (58.36%) of NHS wells level was in the range of 0-2 m below ground level and 35.25% of wells in 2-5 m below ground level. The district-wise depth to water level of August 2023 is shown in **Table 7.2** and the depth to water level map has been shown in **Plate-7.2**.

#### **Water level between 0-2 m**

58.36% of the wells monitored in the state has water level in this range. The districts Malkangiri (90%), Sambalpur (85.9%), Bhadrak (85%), Jagatsinghpur (83.33%), Bargarh (83.08%), Kendrapara (80%), Sonapur (80%), have majority of wells with water level in this range. In most of the command areas of the state like the Hirakud, Rusikulya, Mahanadi stage I & II, Upper Kolab and Potteru the water level is in this range.

#### **Water level between 2-5 m**

35.25 % of the monitored wells showed water level in this range. Among the coastal district Baleshwar (31.71%), Cuttack (38.46%), Puri (38.46%) and parts of Bhadrak had 2 to 5 mbgl of water level. In the central and western Odisha Rayagada (60.87%), Balangir (55.88%), Kandhamal (40.74%), Mayurbhanj (41%) and Nuapada (47.62%) showed water level in this range. All the districts of the state have recorded in this range.

#### **Water level between 5-10 m**

Water level in this range was recorded in 6.18 % of the wells in the state. Districts like Koraput (24.56%), Gajapati (21.62%), Kandhamal (18.52%), Khordha (15.63%), Sundargarh (10.67%) and Dhenkanal (10.26%) showed water level of the wells in this range. They occur as isolated patches.

#### **Water level between 10-20 m**

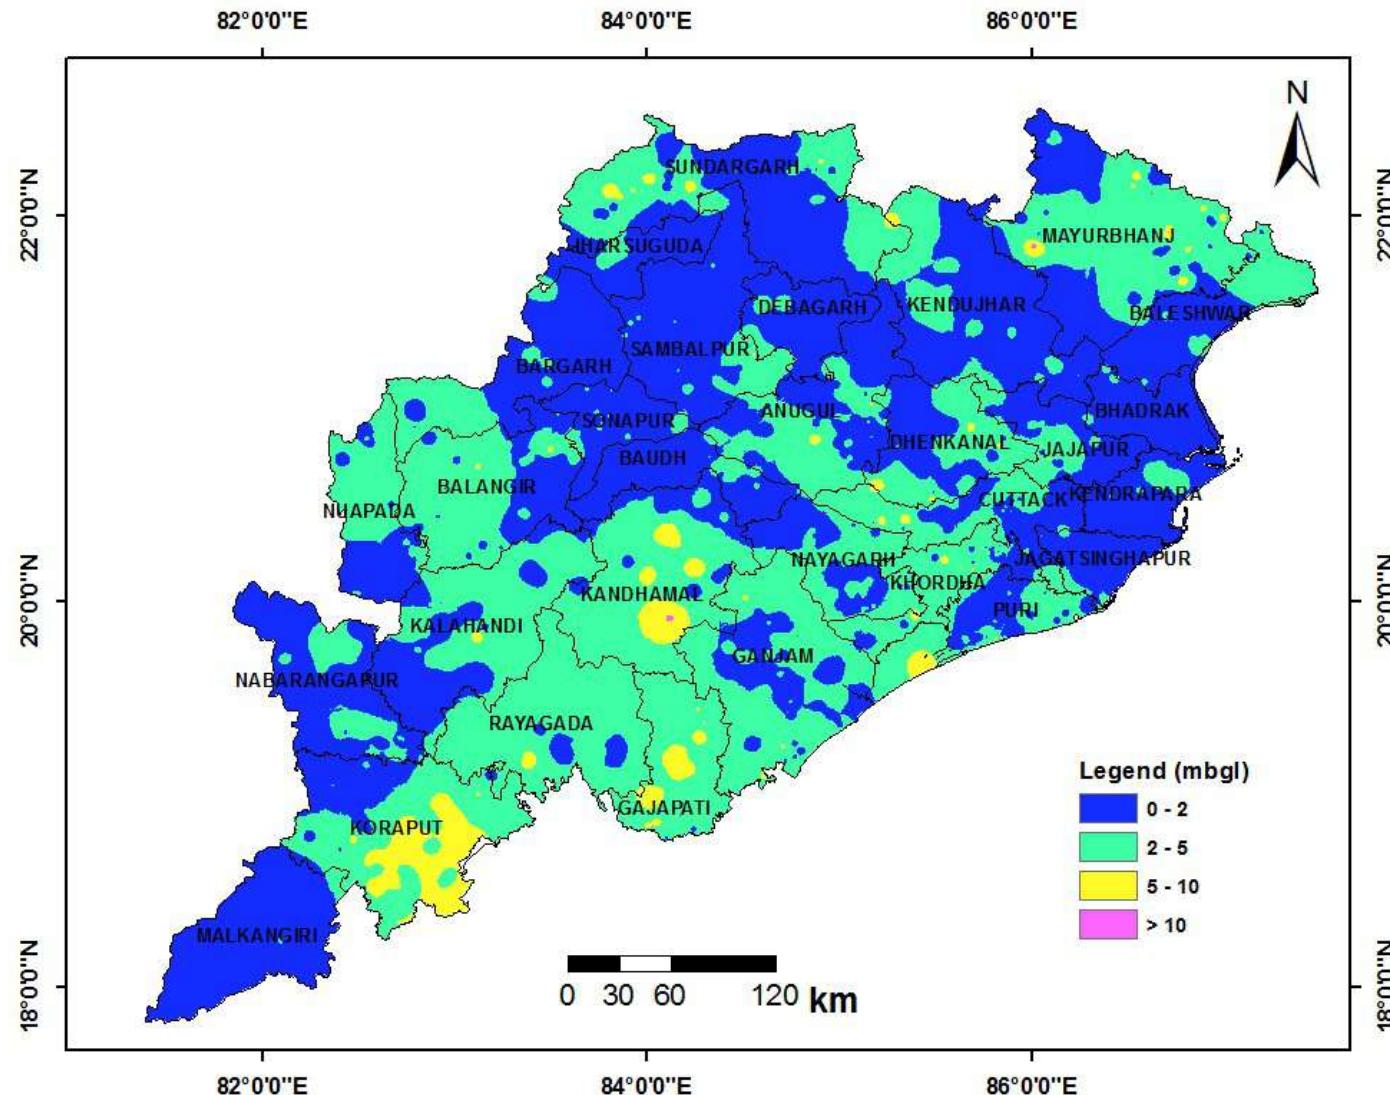

Only 1 well in Sundargarh showed water level in this range during August 2023.

#### **Water level more than 20m**

None of the wells monitored during August 2023 showed water level in this range.

In general the water level in the state during August 2023 monitoring is found in the range of 0-2 m bgl especially in the coastal stretch and in parts of the hilly terrain, whereas 2-5 m bgl water level is found in the coastal and hard rock terrain.

### **7.1.3 DEPTH TO WATER LEVEL OF NOVEMBER 2023**

A perusal of data and maps pertaining to November 2023 shows that the depth to water level ranges from 0.01 to 13.00 mbgl and in majority (39.03%) of NHS wells level was in the range of 0-2 m below ground level and 50.11% of wells in 2-5 m below ground level. The district-wise depth to water level of November 2023 is shown in **Table 7.3** and the depth to water level map has been shown in **Plate-7.3**.

#### **Water level between 0-2 m**

39.03% of the wells monitored in the state has water level in this range. The coastal districts like Bhadrak (80%), Jagatsinghapur (91.67%) and Kendrapara (64%) have majority of wells with water level in this range. In most of the command areas of the state like the Hirakud, Rusikulya, Mahanadi stage I & II, Upper Kolab and Potteru the water level is in this range.

#### **Water level between 2-5 m**

50.11% of the wells monitored showed water level in this range. Among the coastal district Balasore (45.45 %), Cuttack (46.27%) Ganjam (63.22%) and Puri (30.77%) have 2 to 5 mbgl of water level. In the central and western Odisha, Nabarangapur (77.78%), Nuapada (58.82%), Mayurbhanj (60.40%), Balangir (65.52%), Debagarh (61.54%), Anugul (57.14%), and Kandhamal (60%) showed major of the wells in this range. All the districts of the state have recorded in this range.

#### **Water level between 5-10 m**

Water level in this range was recorded in 10.43% of the wells in the state. About 32.79% of wells in Koraput, Mayurbhanj (25.96%), Khordha (22.22%), Rayagada (20%) and Dhenkanal (18.42%) district have showed water level of the wells in this range. They occur as isolated patches in almost all the districts except Bhadrak, Debagarh, Nuapada, Bhadrak, Sonapur, Jagatsinghapur, Jharsuguda, Kendrapara, and Malkangiri.

#### **Water level between 10-20 m**

Only 6 wells fall in this category 3 in Kandhamal, 1 in Koraput, 1 in Sundargarh and 1 in Mayurbhanj.

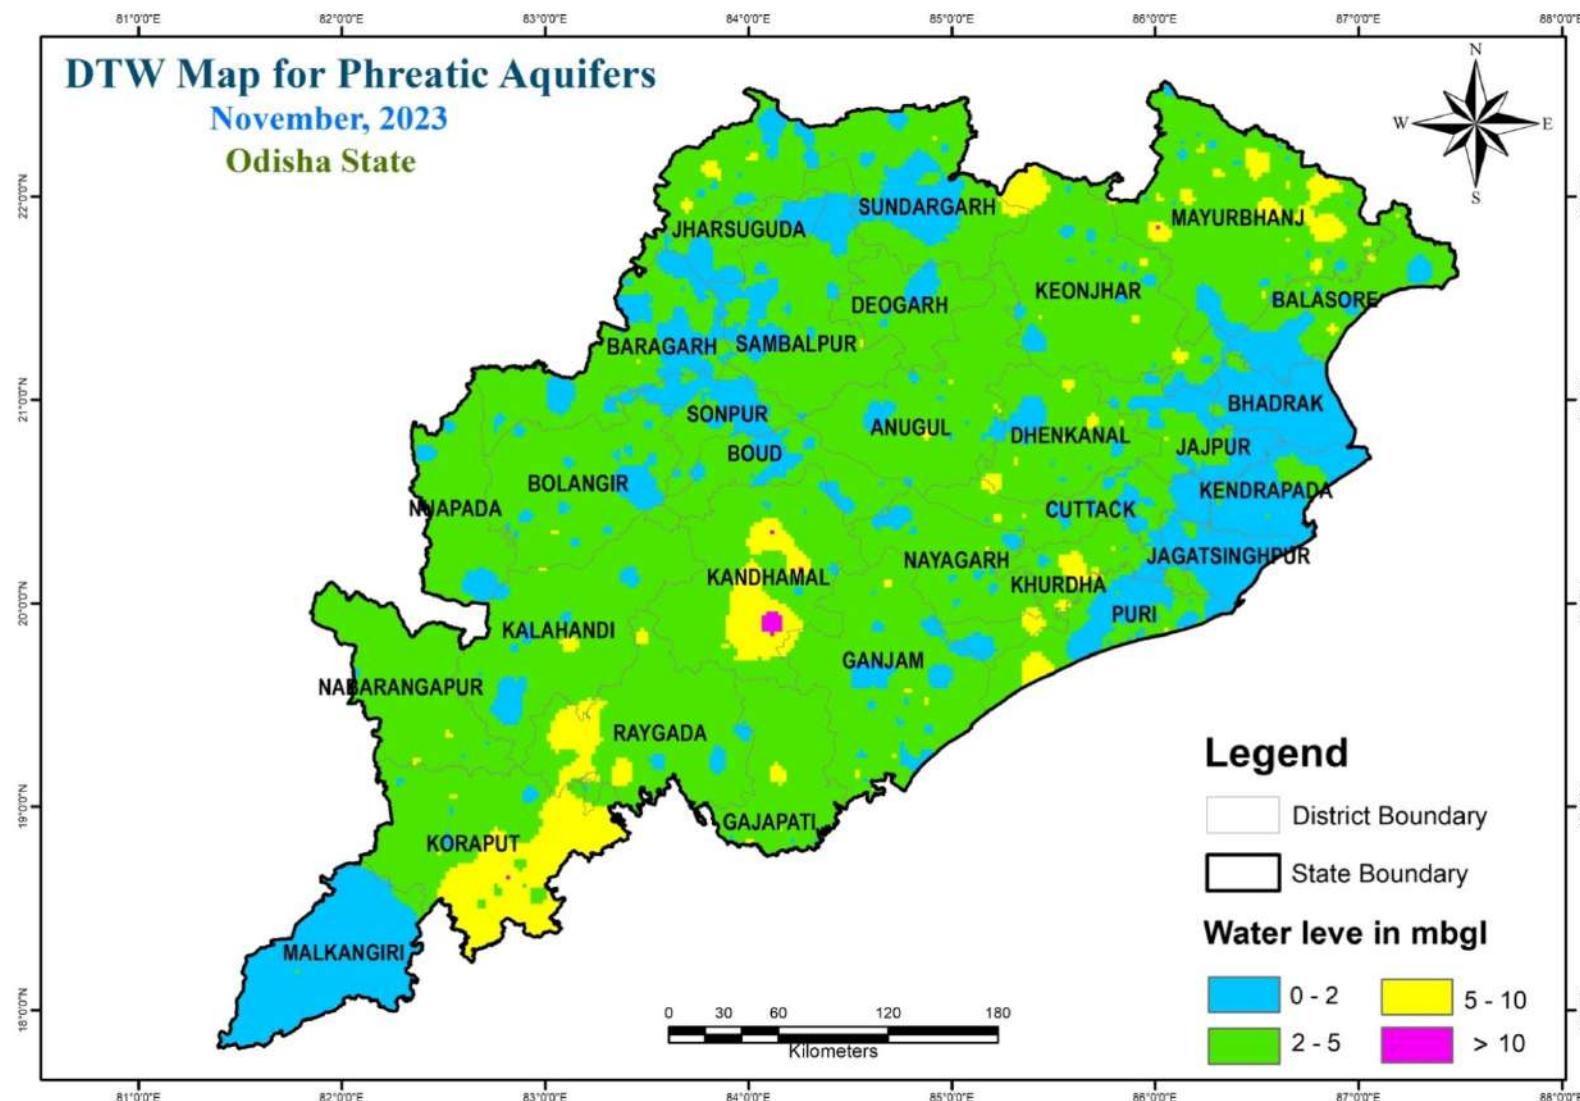

#### **Water level more than 20m**

None of the wells monitored during November 2023 showed water level in this range.

In general the water level in the state during November 2023 monitoring is found in the range of 0-2 m bgl especially in the coastal stretch and in parts of the hilly terrain, whereas 2-5 m bgl water level is found in the coastal and hard rock terrain.

#### **7.1.4. DEPTH TO WATER LEVEL OF JANUARY 2024**

A perusal of data and maps pertaining to January 2024 shows that the depth to water level ranges from 0.18 to 13.15 mbgl and in majority (62.25%) of NHS wells level was in the range of 2-5 m below ground level and 20.88% of wells in 5-10 m below ground level. The district-wise depth to water level of January 2024 is shown in **Table 7.4** and the depth to water level map has been shown in **Plate-7.4**.

##### **Water level between 0-2 m**

16.26% of the wells monitored in the state has water level in this range. The coastal districts like Bhadrak (60%), Jagatsinghpur (50%) and Kendrapara (37.5%) have majority of wells with water level in this range. In most of the command areas of the state like the Hirakud, Rusikulya, Mahanadi stage I & II, Upper Kolab and Potteru the water level is in this range.

##### **Water level between 2-5 m**

62.25% of the monitored wells showed water level in this range. Among the coastal district Balasore (54.55%), Cuttack (68.52%) Gajapati (68.75%) and Puri(57.89%) have 2 to 5 mbgl of water level. In the central and western Odisha, Boudh (93.88%), Nuapada (90%), Debagarh (90%), Balangir (85.51%), Anugul (73.91%), and Malkangiri (72.22%) showed more than or equal to 50% of the wells in this range. All the districts of the state have recorded in this range.

##### **Water level between 5-10 m**

Water level in this range was recorded in 20.88% of the wells in the state. About 53.85% wells of Kandhamal , Dhenkanal (34.29%), Koraput (44.44%), Mayurbhanj (38.71%), Nabarangapur (38.1%), Kendujhar (34.48%) and Kalahandi (33.33%) district have showed water level of the wells in this range. They occur as isolated patches in almost all the districts except Kendrapara and Bhadrak.

##### **Water level between 10-20 m**

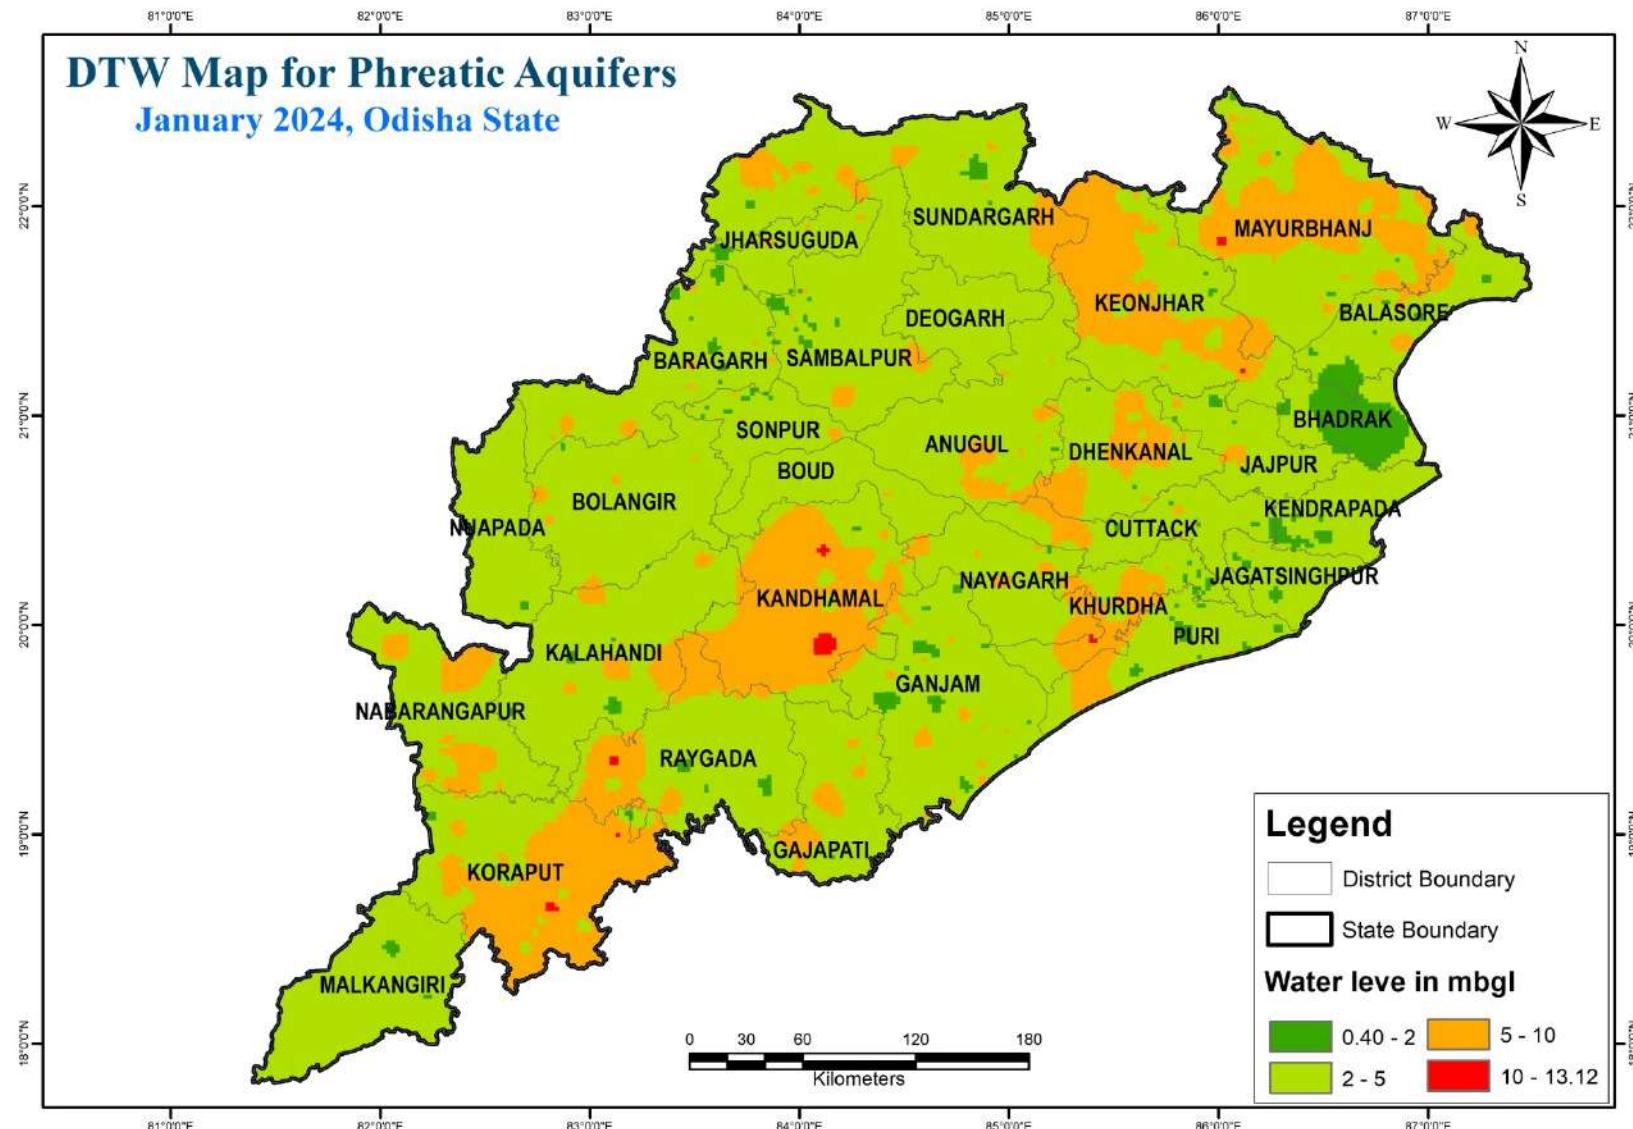

Only 8 wells fall in this category. 2 in Kandhamal, 1 in Khordha, 2 in Koraput, 2 in Mayurbhanj and 1 in Rayagada.

##### **Water level more than 20m**

None of the monitored well of January 2024 showed water level in this range.

In general the water level in the state during January 2024 monitoring is found in the range of 0-2 m bgl especially in the coastal stretch and in parts of the hilly terrain, whereas 2-5 m bgl water level is found in the coastal and hard rock terrain.

## **7.2 FLUCTUATION IN COMPARISON TO CORRESPONDING PERIOD OF PREVIOUS YEAR**

### **7.2.1 APRIL 2022 - APRIL 2023**

The district-wise categorization of change in water level during April-2022 with respect to that of April-2023 has been given in **Table 7.5** and has been presented in **Plate 7.5**.

#### **Rise of water level**

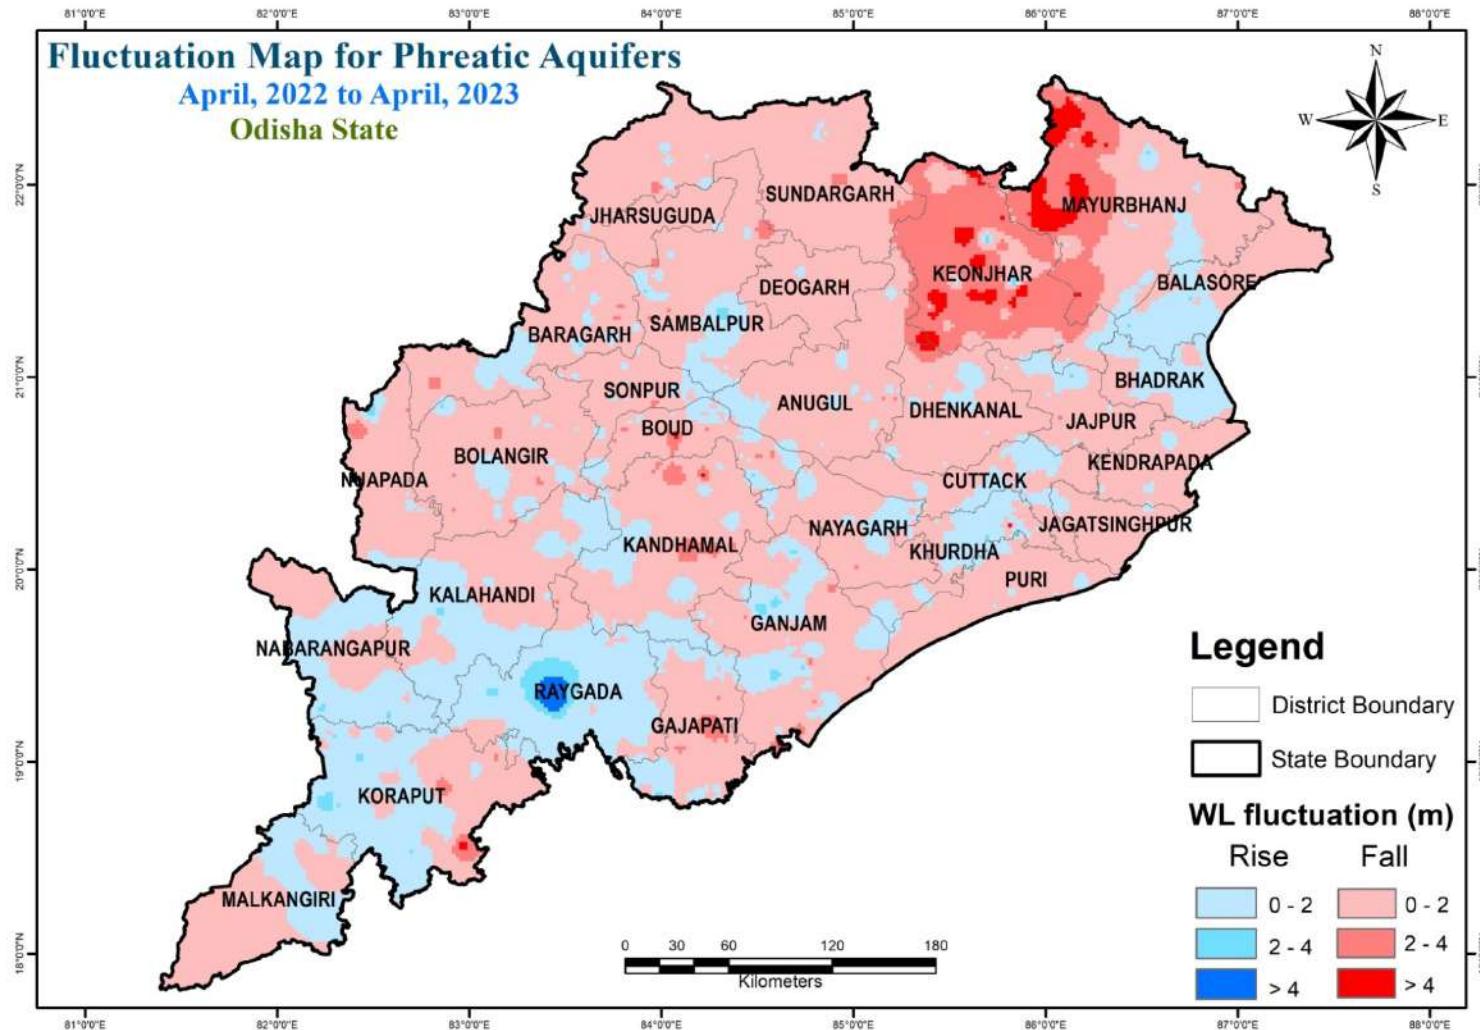

A perusal of data and map showing the variation in water level of April 2022 with respect to April 2023 shows that 33.07% of the wells recorded a rise in water level. Maximum number of wells have shown rise in 0-2m range, i.e., 29.09% of the total wells analysed. All the districts show this range of rise. The command areas of the state have recorded a rise in this range. Rise in 2-4m range is noticed only in 3.64% of the wells, mainly in Gajapati, Nabarangapur and Koraput districts. Rise of more than 4m is observed only in 0.35% of the wells, which occur in isolated wells in the state.

#### **Fall of water level**

A perusal of data and map pertaining to the fluctuation of April 2022 with respect to April 2023 shows that in 66.93% of wells there has been fall in water level. The fall in water level in the range of 0-2m have been observed in 56.10% of the wells in the state. It varies from minimum of 16.67 % in Nabarangapur district to maximum of 81.82% in Jharsuguda district. Fall in 2-4m range is observed in 7.71% of wells. More than 4 m fall in water level has been observed in a minor 3.12% wells of the state.

In general a fall in water level has been observed in April 2023 with respect to April 2022.

**WATER LEVEL FLUCTUATION MAP: APRIL 2022 VS APRIL 2023**

## **7.2.2 AUGUST 2022 - AUGUST 2023**

The district-wise categorization of change in water level during August-2023 with respect to that of August-2022 has been given in **Table 7.6** and rise/ fall map has been presented in **Plate 7.6**.

### **Rise in water level**

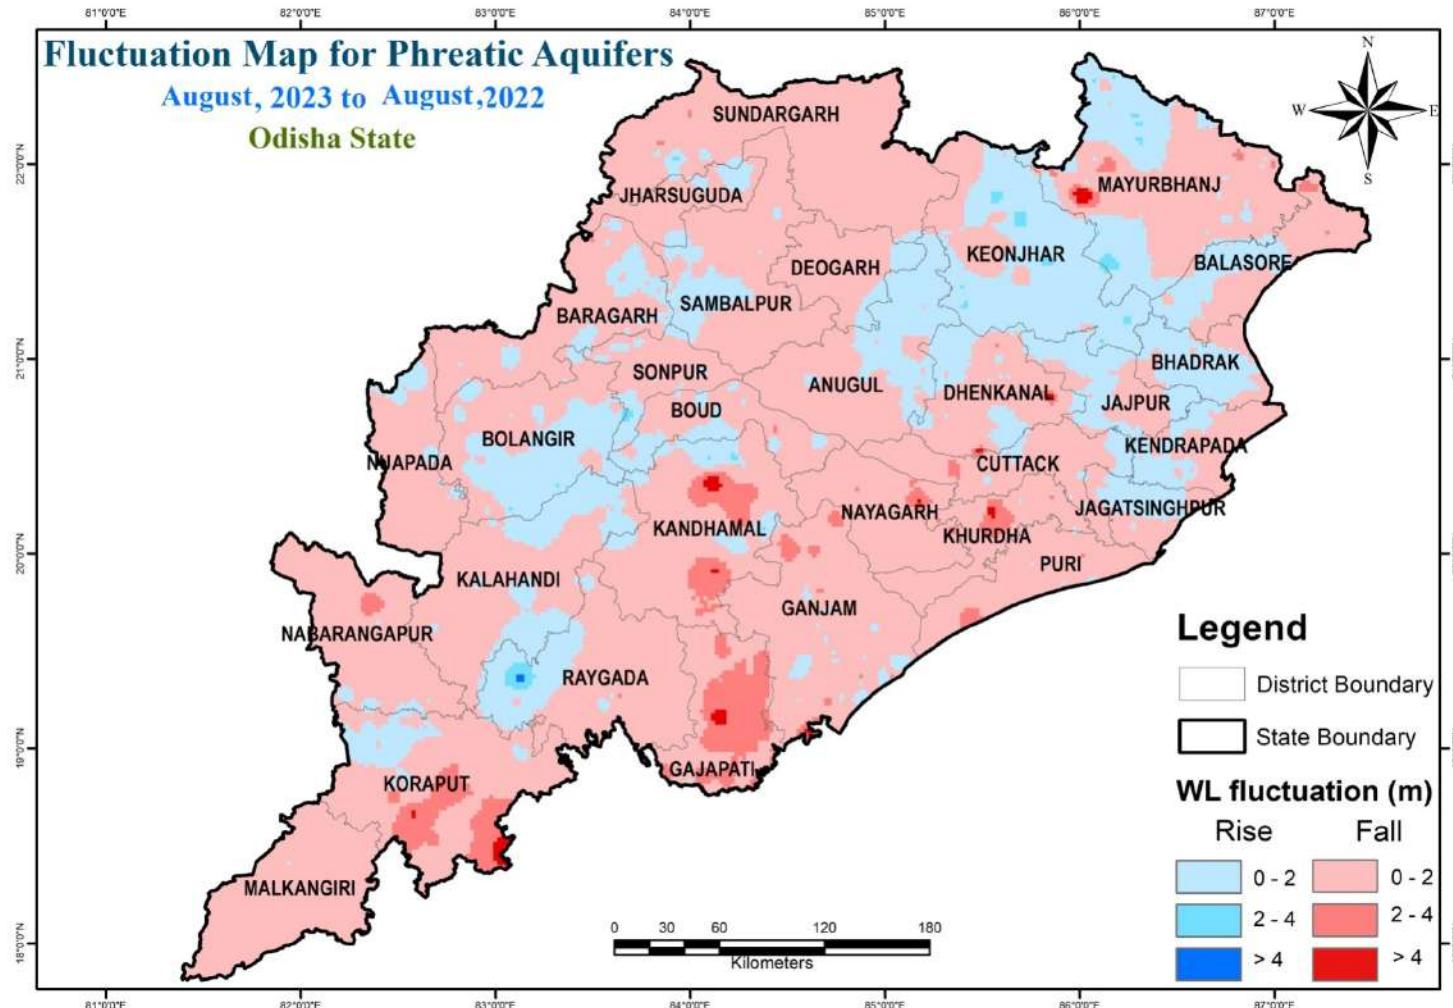

A perusal of data and maps pertaining to fluctuation of August 2023 water level with that of August 2022 showed that 33.20% of the total stations showed a rise in water level. The rise is more in 0-2 m range ie about 30.96%, 2.17% in 2-4 m range and 0.1% in greater than 4 m range. All the districts have recorded water level in 0-2m range except Debagarh and Nayagarh. 2-4m range occurs in isolated patches mainly in Kendujhar, Kandhamal, Mayurbhanj and Balangir districts. Greater than 4 m rise is observed only 1 well of Rayagada district.

### **Fall in water level**

A total of 66.80% NHNS showed a fall in water level in August 2023 as compared to August 2022. Out of which 59.60% wells showed fall in 0-2m range, 5.80% in 2-4m range and a minor 1.39% in greater than 4 m range. Debagarh district shows a maximum fall of 100% in the range of 0-2m. Fall in 2-4m range is found in isolated patches mainly in Gajapati, Ganjam, Koraput, Kandhamal and Nayagarh district. Greater than 4m fall in water level is found in isolated patches mainly in Kandhamal, Koraput, Dhenkanal and Gajapati districts.

In general a fall in water level is observed throughout the state during August 2023 with respect to August 2022.

**WATER LEVEL FLUCTUATION MAP: AUGUST 2022 VS AUGUST 2023**

### **7.2.3 NOVEMBER 2022 - NOVEMBER 2023**

The district-wise categorisation of change in water level during November-2022 with respect to November-2023 has been given in **table 7.7** and rise/ fall map has been presented in **Plate 7.7**.

#### **Rise in water level**

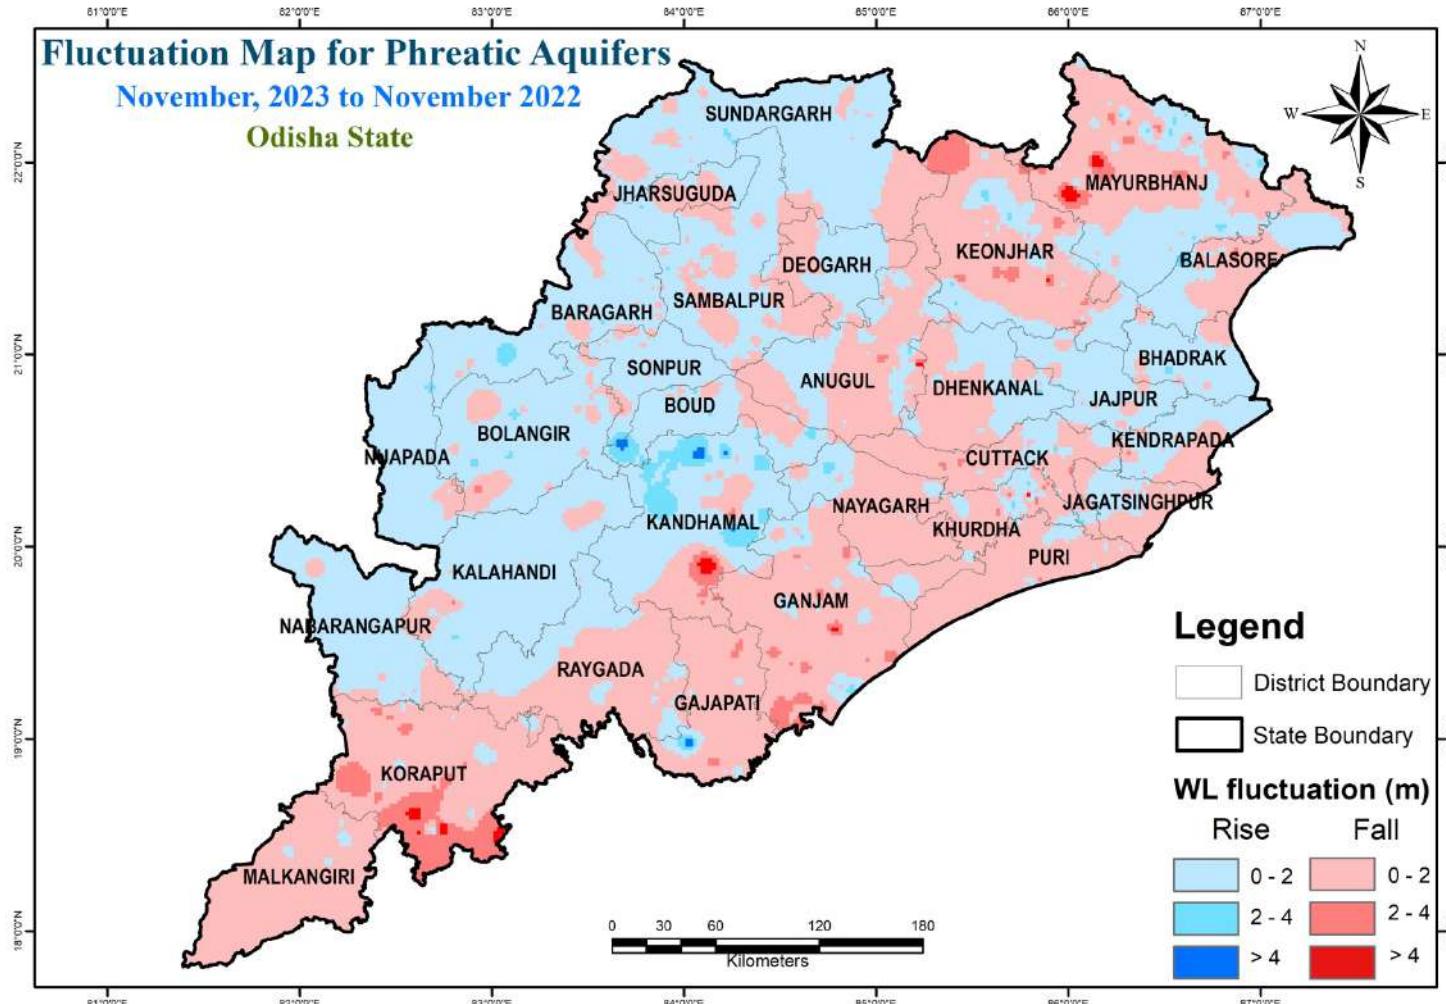

A perusal of data and maps pertaining to fluctuation of November 2023 water level with that of November 2022 showed that 47.01% of the total stations showed a rise in water level. The rise is more in 0-2 m range i.e. 40.94%; 5.31% in 2-4 m range and 0.76% in more than 4 m range. All the districts have recorded rise in 0-2m range. Most of the districts show water level rise in 2-4 m range except Debagarh, Jagatsinghapur, Koraput, Malkangiri, Nabrangapur and Rayagada. Only 10 wells (0.76%) of the total wells monitored showed greater than 4 m rise. They occur as minor patches within the state.

#### **Fall in water level**

A total of 52.99% NHS showed a fall in water level in November 2023. About 44.81% wells showed fall in 0-2m range, 6.52% in 2-4m range and a minor 1.67% in greater than 4 m range. All the districts have recorded fall in the range of 0-2m. Fall in 2-4m range is mainly found in Koraput, Kendujhar, Cuttack, Gajapati, Ganjam, Khordha, Mayurbhanj and Nayagarh. Greater than 4m fall in water level is found in minor patches in 22 wells of the state.

In general a slight fall in water level is observed throughout the state during November 2023 with respect to November 2022 and majority of wells recorded 0-2 m fall due to variation of monsoon rainfall and development.

**WATER LEVEL FLUCTUATION MAP: NOVEMBER 2022 VS NOVEMBER 2023**

#### **7.2.4 JANUARY 2023 – JANUARY 2024**

The district-wise categorisation of change in water level during January-2023 with respect to that of January-2024 has been given in **Table 7.8** and has been presented in **Plate 7.8**.

##### **Rise in water level**

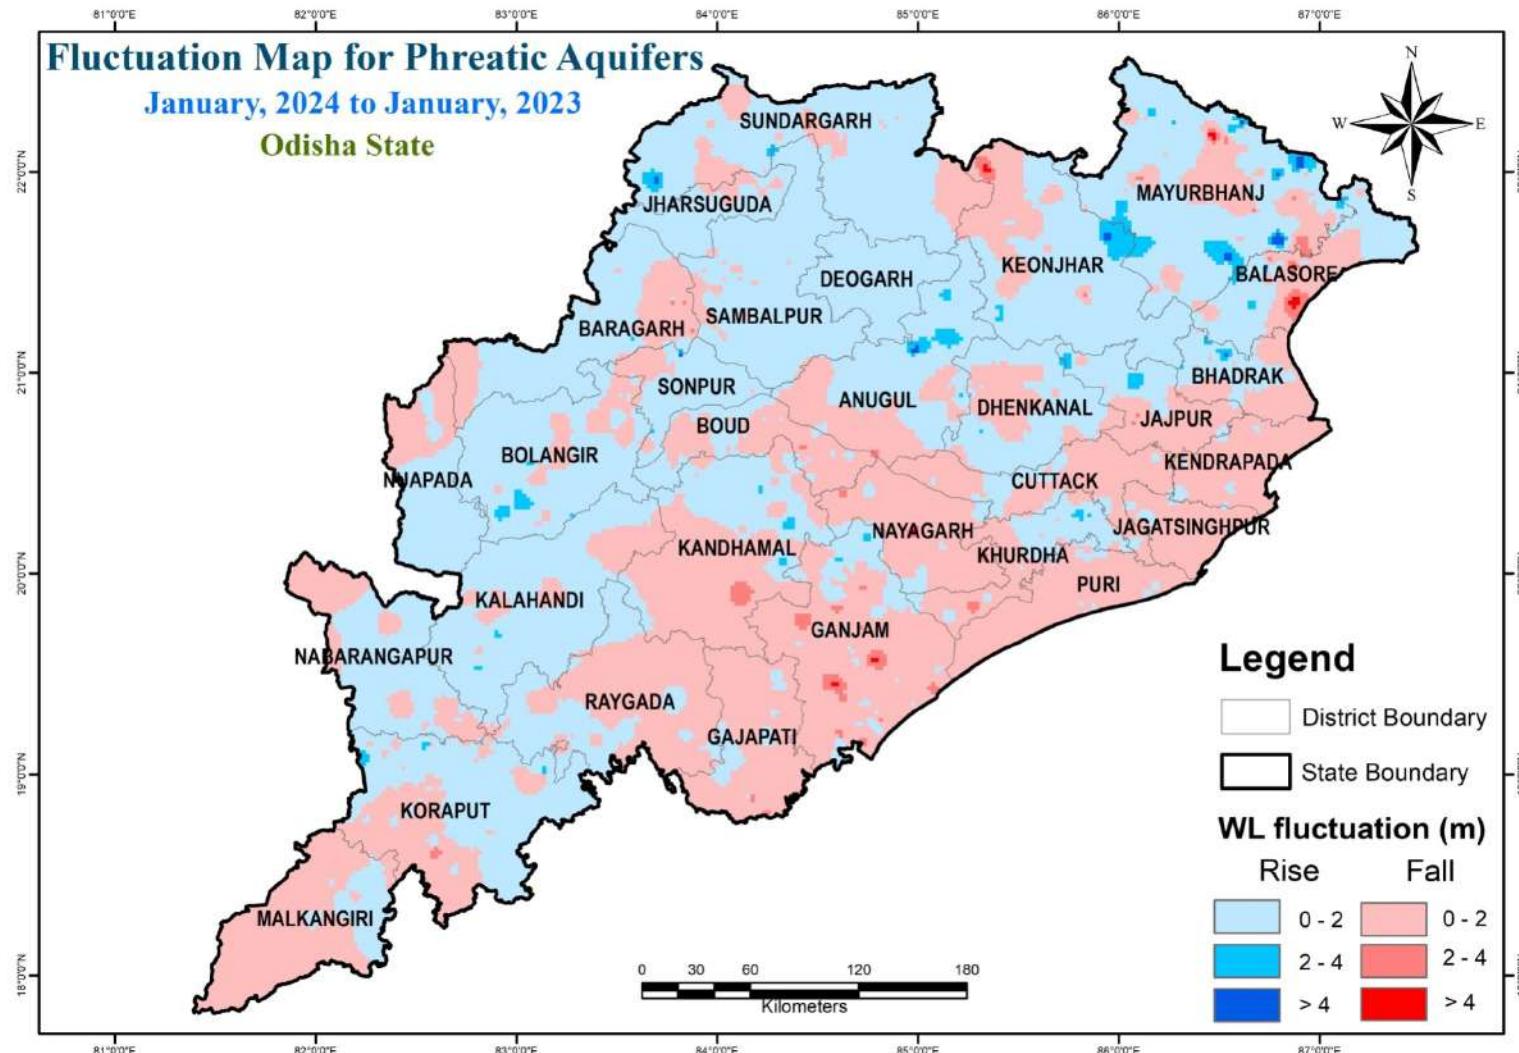

A perusal of data and maps pertaining to fluctuation of January 2024 water level with that of January 2023 showed that 53.34% of the total stations showed a rise in water level. The rise is more in 0-2 m range ie about 47.70%, 4.60% in 2-4 m range and 1.10% in greater than 4 m range. All the districts have recorded water level in 0-2m range. 2-4m range occurs in isolated patches throughout the state. Only 14 wells (1.10%) in Anugul, Bhadrak and Mayurbhanj district showed water level greater than 4 m rise.

##### **Fall in water level**

A total of 46.64% NHS showed a fall in water level in January 2024 as compared to January 2023. Out of which 42.50% wells showed fall in 0-2m range, 3.40% in 2-4m range and a 0.70% in greater than 4 m range. Puri district shows a maximum fall of 76.60% in the range of 0-2m. Fall in 2-4m range is found in almost all the districts mainly in Ganjam, Gajapati, Jajapur, Anugul, Mayurbhanj and Baleshwar districts. Greater than 4m fall in water level is found in 0.70 of wells. They occur as minor patches within areas showing fall in 2-4m range.

In general a rise in water level is observed throughout the state during January 2024 with respect to January 2023.

**WATER LEVEL FLUCTUATION MAP: JANUARY 2023 VS JANUARY 2024**

## **7.3 FLUCTUATION WITH RESPECT TO PRE-MONSOON WATER LEVEL**

### **7.3.1 APRIL 2023 - AUGUST 2023**

The district-wise categorization of change in water level during August-2023 with respect to that of April-2023 has been given in **Table 7.9** and rise / fall map has been presented in **Plate 7.9**.

#### **Rise in water level**

97.11 % of the wells monitored in August 2023 showed a rise in water level when compared with that of April 2023 (Pre-monsoon). 35.53% of wells showed rise in 0-2 m range, 34.80% in 2-4 m range and 26.78% rise in the range of more than 4m. A maximum of 87.14% of wells in Puri district and a minimum of 2.78% in Dhenkanal district recorded a rise in the range of 0-2m. A maximum of 58.82% of wells in Bhadrak district and a minimum of 10% in Puri district recorded rise in the range of 2 – 4m. A maximum of 68% of wells in Kandhamal district recorded rise in the range of >4m.

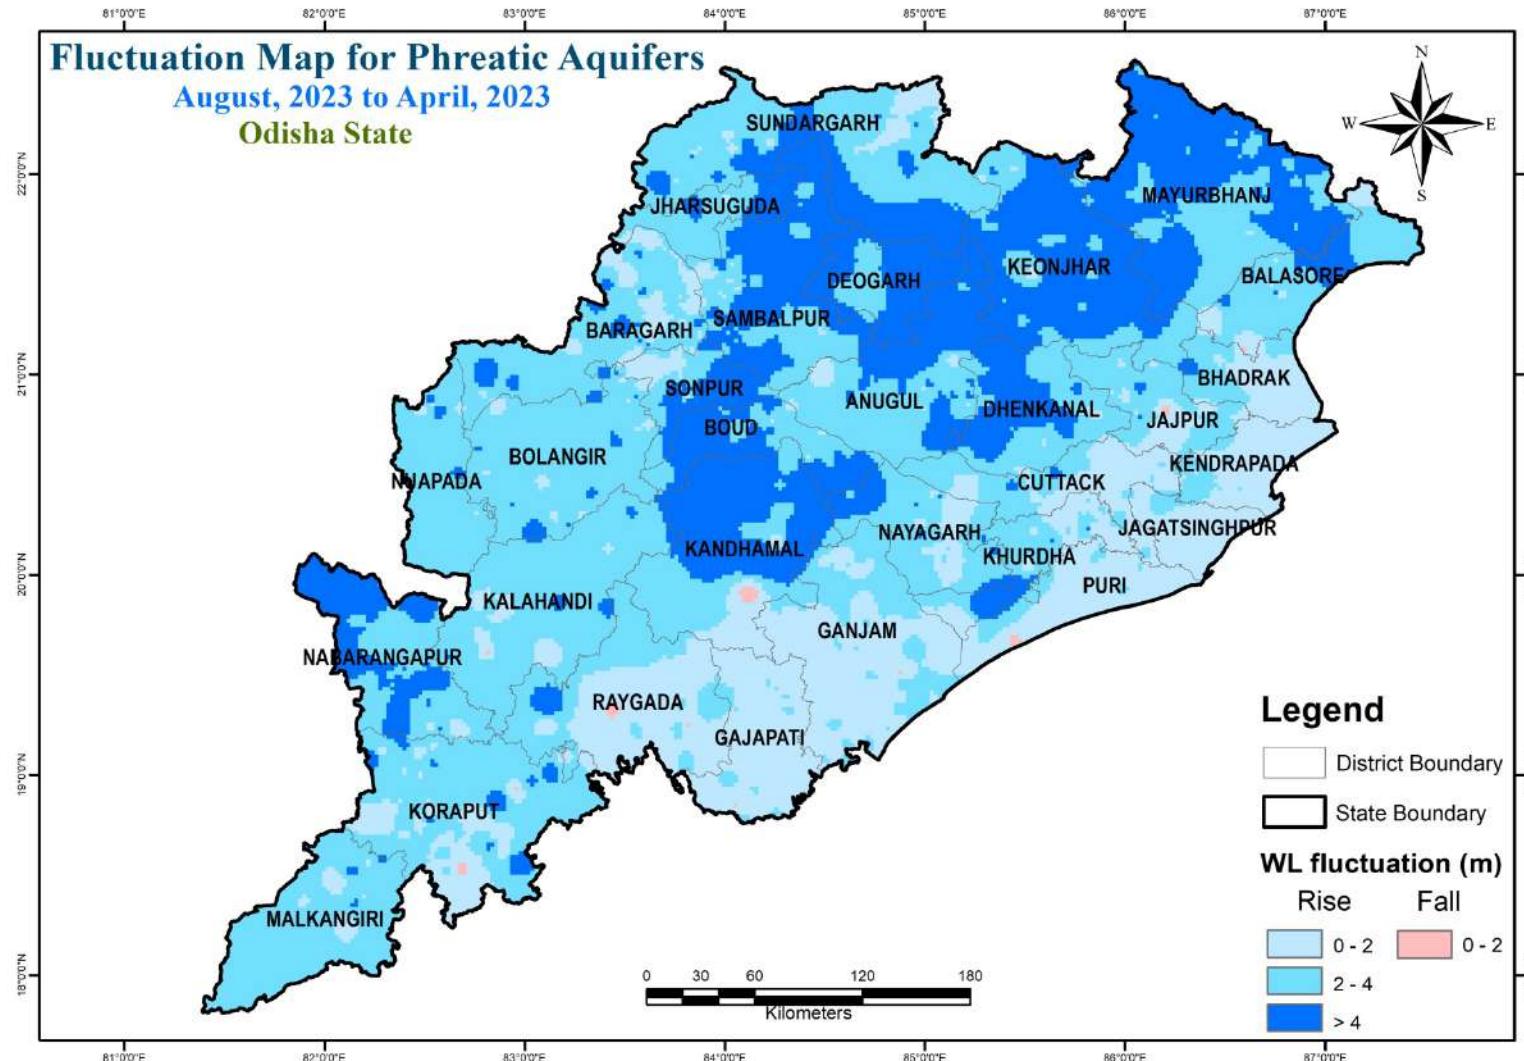

#### **Fall in water level**

Only 2.89% of the wells monitored showed a fall in water level. 2.89% of wells showed fall in 0-2 m range. The fall in 0-2m range is mainly seen in Baleswar, Rayagada, Khordha, Koraput, Cuttack, Jajpur, dhenkanalk and Gajapati district. No well showed a fall in water level in > 2 m range.

In general as it should be, a rise in water level is observed throughout the state during August 2023 with respect to April 2023 and majority of wells recorded 0-4 m rise because of recharge of aquifer due to monsoon rainfall.

### **7.3.2 APRIL 2023 - NOVEMBER 2023**

The district-wise categorization of water level fluctuation of April 2023 with respect to November-2023 has given in **Table 7.10** has been shown in **Plate :- 7.10**.

#### **Rise in water level**

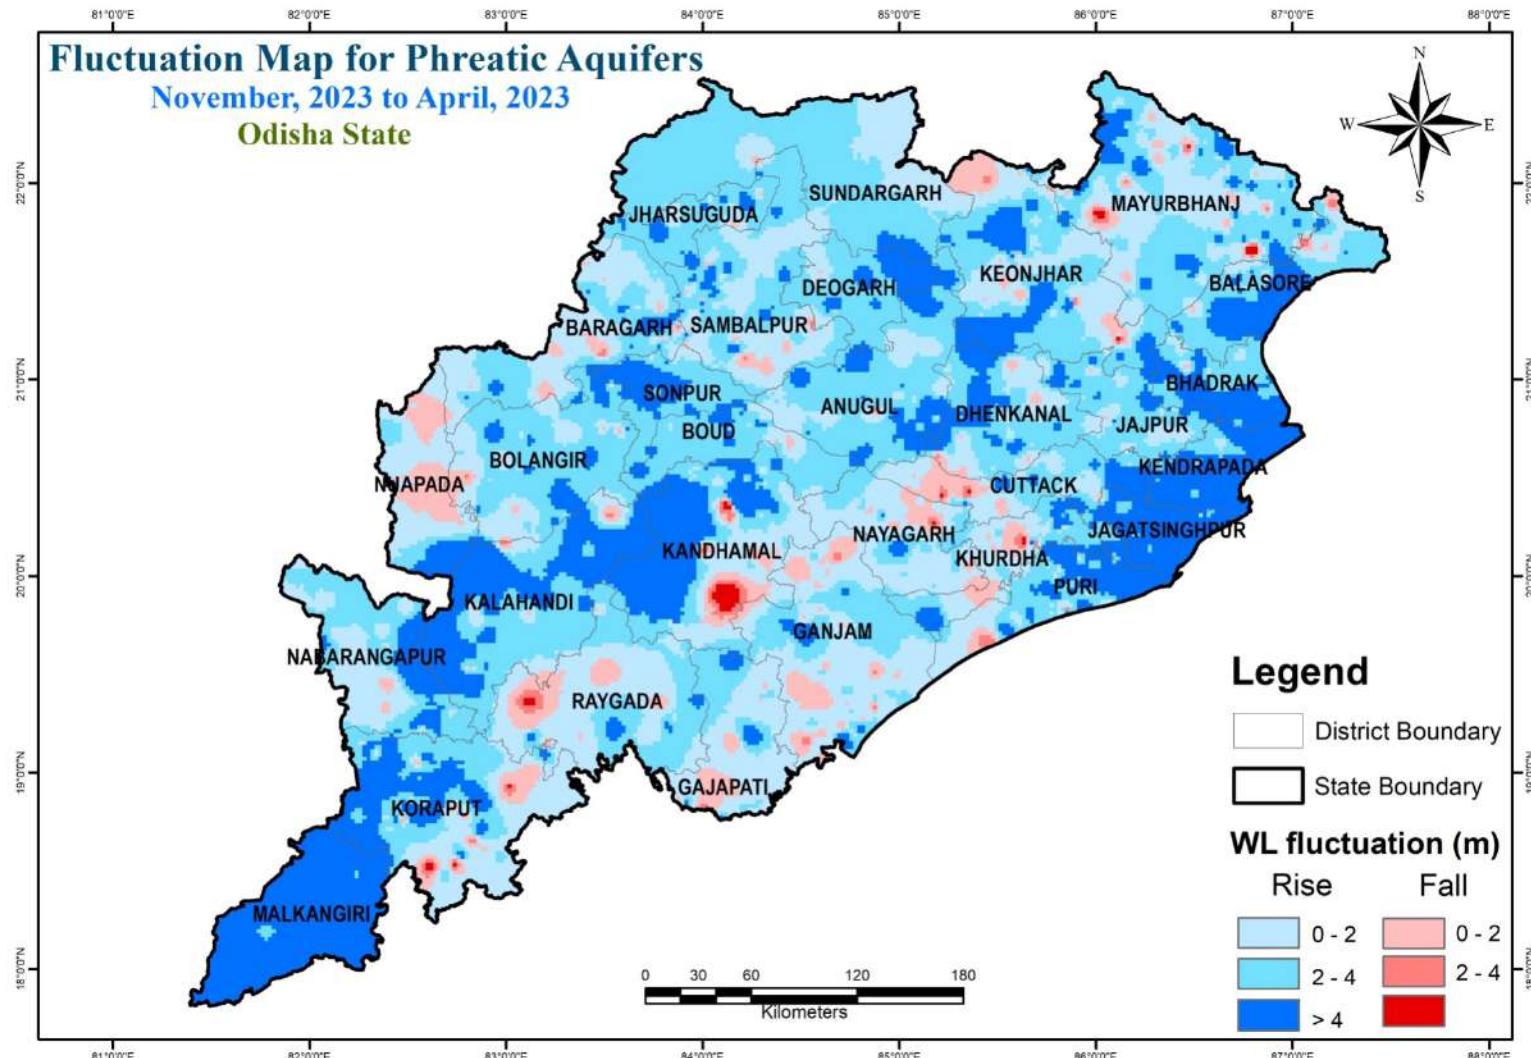

91.13 % of the wells monitored in November 2023 showed a rise in water level when compared with that of April 2023. About 38.83% of wells showed rise in 0-2 m range, 34.85% in 2-4 m range and 17.46% rise in the range of more than 4m. A maximum of 88.89% of wells in Jagatsinghapur district and a minimum of 14.29% in Nuapada district recorded a rise in the range of 0-2m. A maximum of 69.81% of wells in Balangir district recorded rise in the range of 2 – 4m with majority of the districts in the state have more than 25% of the wells showing rise in this range. A maximum of 50% of wells in Debagarh district recorded rise in the range of more than 4m.

#### **Fall in water level**

Only 8.87% of the wells monitored showed a fall in water level which almost fall in 0-2 m range. The fall in 0-2m (6.35%) range is seen in adequate number of wells in Cuttack, Koraput, Ganjam and Gajapati districts.

In general as it should be, a rise in water level is observed throughout the state during November 2023 with respect to April 2023 and majority of wells recorded 0-4 m rise because of recharge of aquifer due to monsoon rainfall.

### **7.3.3 APRIL 2023 – JANUARY 2024**

The district-wise categorization of water level fluctuation of January 2024 with respect to April 2023 has been given in **Table 7.11** and has been presented in **Plate 7.11**.

#### **Rise in water level**

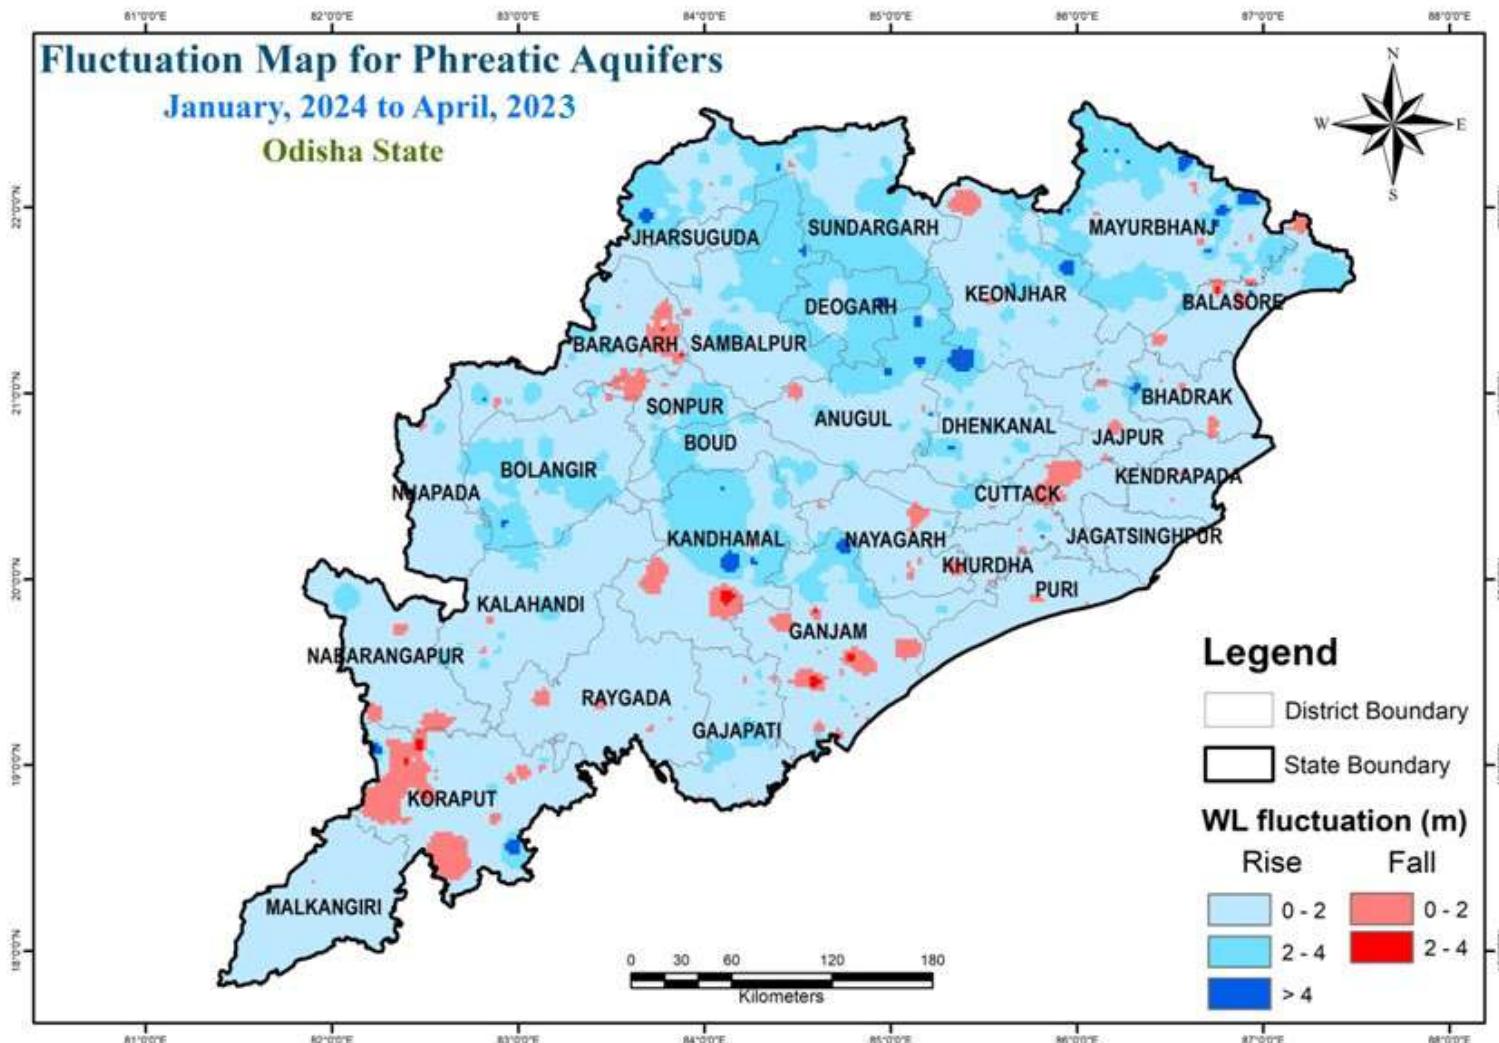

82.74 % of the wells monitored in January 2024 showed a rise in water level when compared with that of April 2023. 55.62% of wells showed rise in 0-2 m range, 23.29% in 2-4 m range and 3.83% rise in the range of more than 4m. A maximum of 92.31% of wells in Malkangiri and a minimum of 25.93% in Kandhamal district recorded a rise in the range of 0-2m. A maximum of 50% of wells in Debagarh and a minimum of 4.55% in Rayagada district recorded rise in the range of 2 – 4m. A maximum of 16.09% of wells in Mayurbhanj and a minimum of 1.41% in Sambalpur district recorded rise in the range of more than 4m.

#### **Fall in water level**

17.26% of the wells monitored showed a fall in water level which almost fall in 0-2 m range. The fall in 0-2m (15.80%) range is seen in almost all the wells of the state except Debagarh, Jharsuguda and Dhenkanal. 1.30% and 0.16% of wells show fall respectively in 2 – 4 m and more than 4 m range.

In general as it should be, a rise in water level is observed throughout the state during January 2024 with respect to April 2023 and majority of wells recorded 0-4 m rise because of recharge of aquifer due to monsoon rainfall.

WATER LEVEL FLUCTUATION MAP: APRIL 2023 VS JANUARY 2024

## **7.4 WATER LEVEL FLUCTUATION WITH RESPECT TO DECADAL MEAN**

### **7.4.1 APRIL 2023 – DECADAL MEAN (APR 2013 – APR 2022)**

The district-wise categorisation of change in water level in April-2023 with respect to the decadal mean (April 2013 to April 2022) has been given in **Table-7.12** and rise and fall map has been presented in **Plate-7.12**.

#### **Fall in water level**

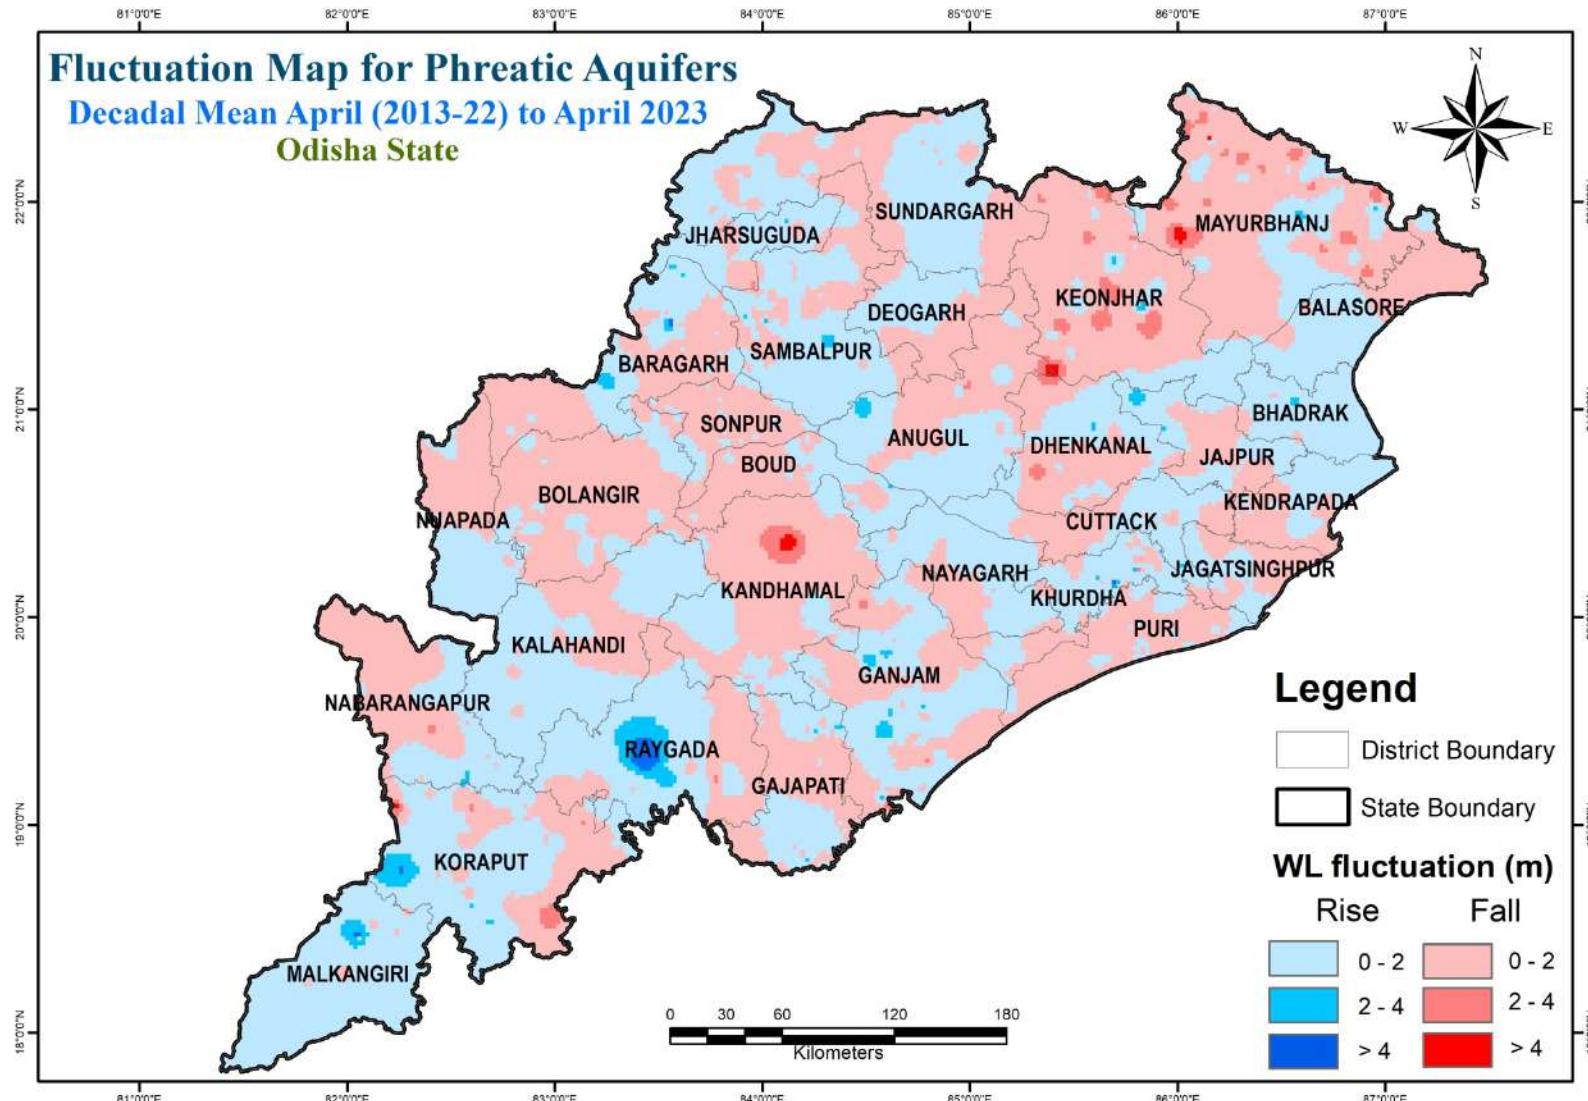

A perusal of the data and map pertaining to April 2023 with reference to decadal mean (2013-2022) shows fall in water level is observed in 49.35% of the total wells in the state. 43.97% of the wells have shown fall in the 0-2m range. It varies from minimum of 22.22% of wells in Jharsuguda district to a maximum of 66.07% of wells in Balangir district. All the districts have shown water level in this range. 4.82% of wells have shown fall in the range of 2-4m and 0.56% of wells in more than 4 m range.

#### **Rise in water level**

A perusal of the data and map pertaining to April 2023 with reference to Decadal mean (2013-2022) shows that 50.65% of total NHS wells in the state shows rise in water level. Rise in water level between 0-2m has been observed in 45.18% of the network stations in the state. It varies from minimum of 25% Nuapada and a maximum of 72.50% in Nayagarh district. All the districts have recorded rise of water level in this range. 4.73% of wells have shown rise in the range of 2-4 m mainly in Baleshwar, gajapati, Jharsuguda and Bhadrak. Only 0.74% of wells have shown rise in more than 4 m range.

In general a slight rise has been recorded in water level of April 2023 when compared with the decadal mean (April 2013-2022).

## **7.2.2 AUGUST 2023- DECADAL MEAN (AUGUST 2013- 2022)**

The district-wise categorisation of change in water level during August -2023 with respect to the decadal mean (August-2013- August-2022) has been given in **Table 7.13** and presented in **Plate 7.13**.

### **Rise in water level**

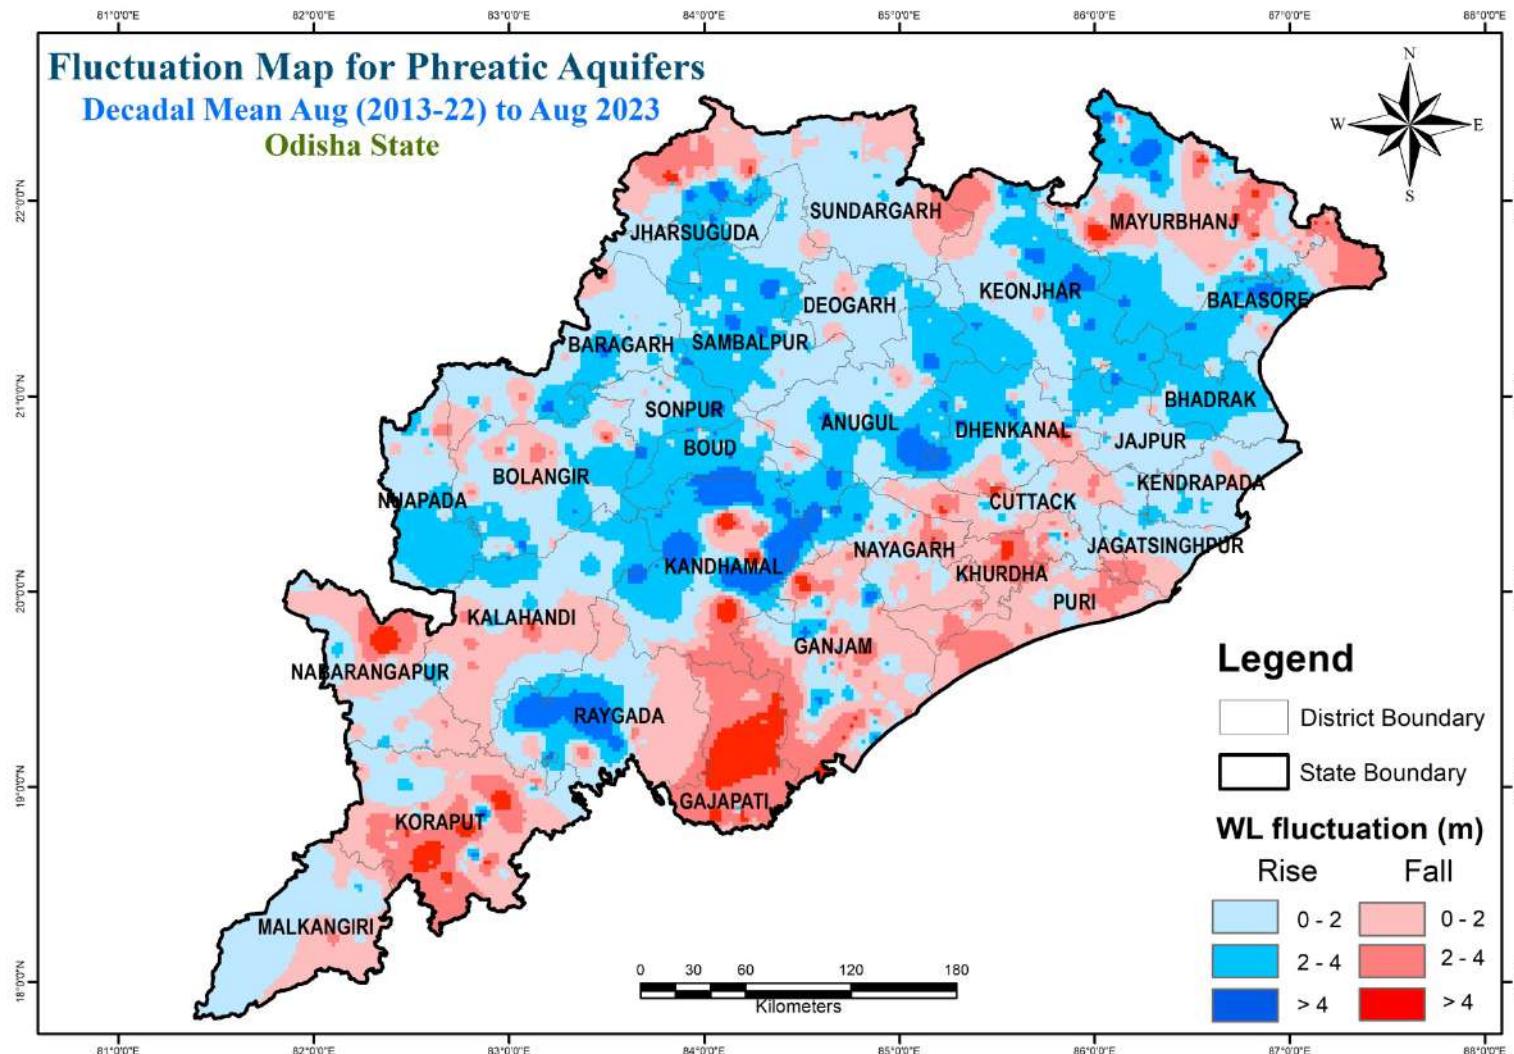

A perusal of the data and map pertaining to August 2023 with reference to decadal mean (2013-22) shows that rise in water level between 0-2m has been observed in 45.94% of the network stations in the state. All the districts have recorded rise of water level in this range. Rise in water level between the ranges of 2-4m has been noticed in 3.08% wells in isolated locations and more than 4m have been observed in 0.53% of wells.

### **Fall in water level**

Fall in water level is seen in patches mostly in the hard rock and hilly terrain of the state. Fall in water level between 0-2 m has been observed in 45.26% of the network monitoring wells in the state. Fall in water level between the ranges of 2-4m has been observed in 4.14% of network wells in the state. Fall in water level of more 4m, is 1.05% of the total wells in the state.

In general a slight fall has been recorded in water level of August 2023 when compared with the decadal mean (August 2013-2022). It can be safely concluded that variation in water level is not due to over development; rather the water levels reflect the variation of rainfall in space and time.

### **7.2.3 NOVEMBER 2023 - DECADAL MEAN (NOVEMBER 2013 - 2022)**

The district-wise categorizations of change in water level during November-2023 with respect to the decadal mean (November 2013 – November 2022) has been given in **Table 7.14** and presented in **Plate 7.14**.

#### **Rise in water level**

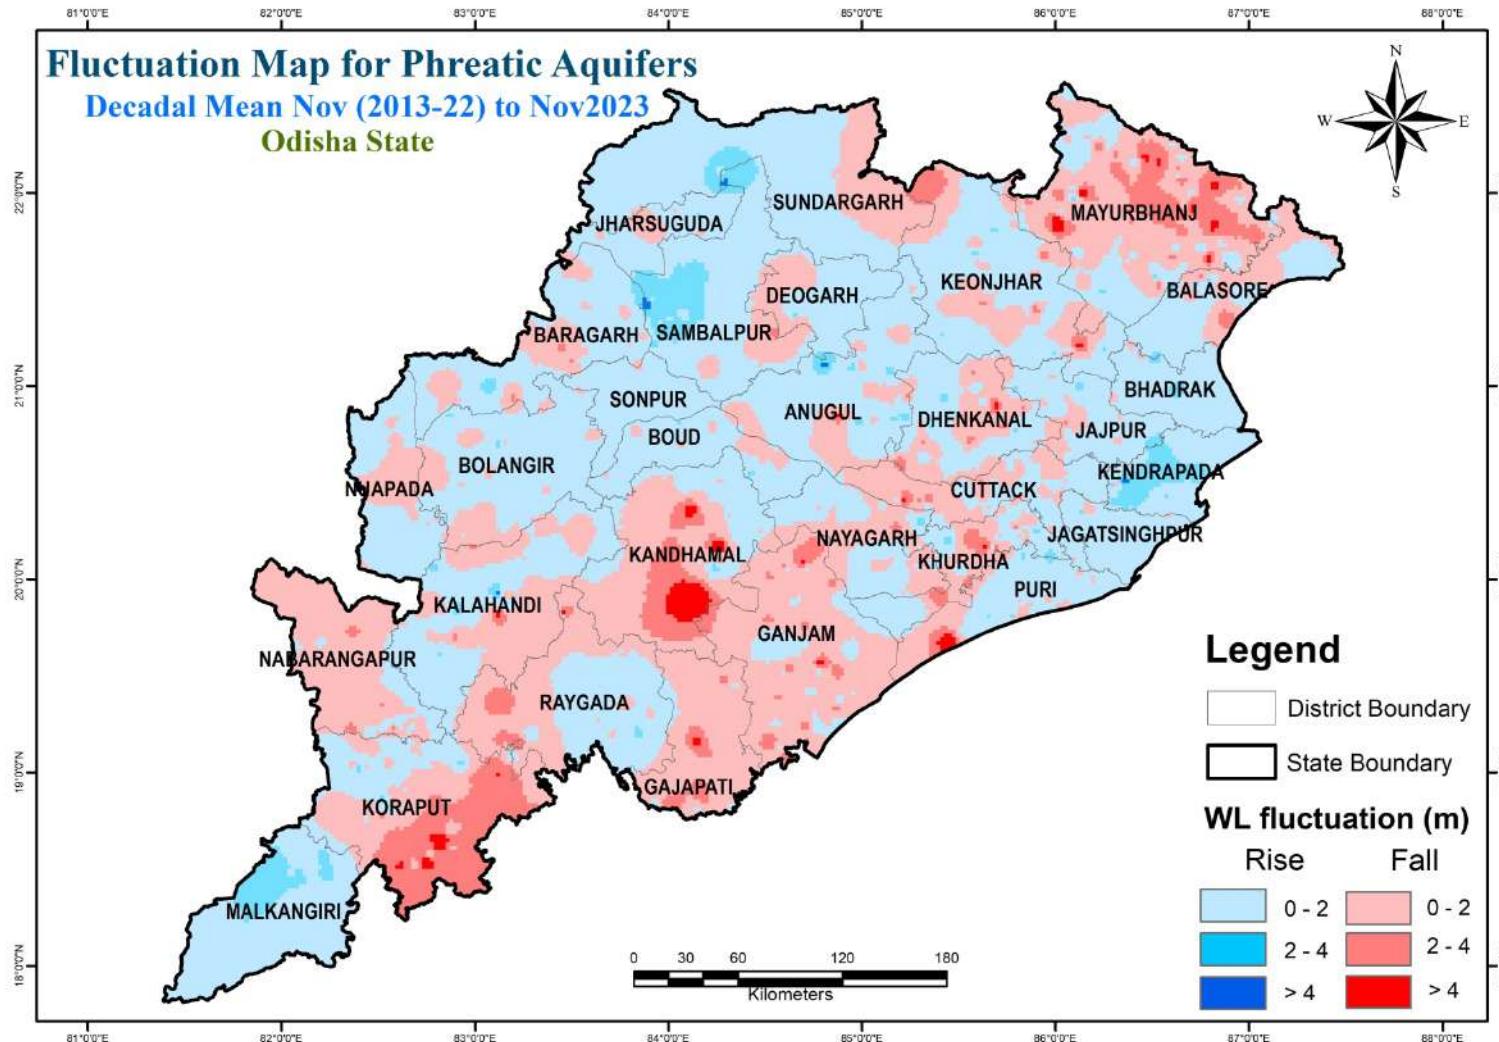

A perusal of the data and map pertaining to November 2023 with reference to decadal mean (2013-22) shows that rise in water can be observed in 49.30% wells. Rise in water level between 0-2m has been observed in 46.01% of the network stations in the state. All the districts have recorded rise of water level in this range. Rise in water level between the ranges of 2-4m has been noticed in 2.90% wells in isolated locations and more than 4m have been observed in 0.39 of wells.

#### **Fall in water level**

Fall in water level is seen in all districts and can be observed in 50.70% of wells of the state. Fall in water level between 0-2 m has been observed in 45.77% of the network monitoring wells in the state. Fall in water level between the ranges of 2-4m has been observed in 4.07% of network wells in the state which occur in patches. Fall in water level of more than 4m is present in 11 wells with 0.86% of the total wells in the state.

In general a slight fall in water level of November 2023 when compared with the decadal mean (November 2013-2022). It can be concluded that variation in water level is due to development as well as variation of rainfall in space and time.

## **7.2.4 JANUARY 2024 - DECADAL MEAN (JANUARY 2014 - 2023)**

The district-wise categorisation of change in water level during January -2024 with respect to the decadal mean (2014 - 2023) has been given in **Table 7.15**and presented in **Plate 7.15**.

### **Rise in water level**

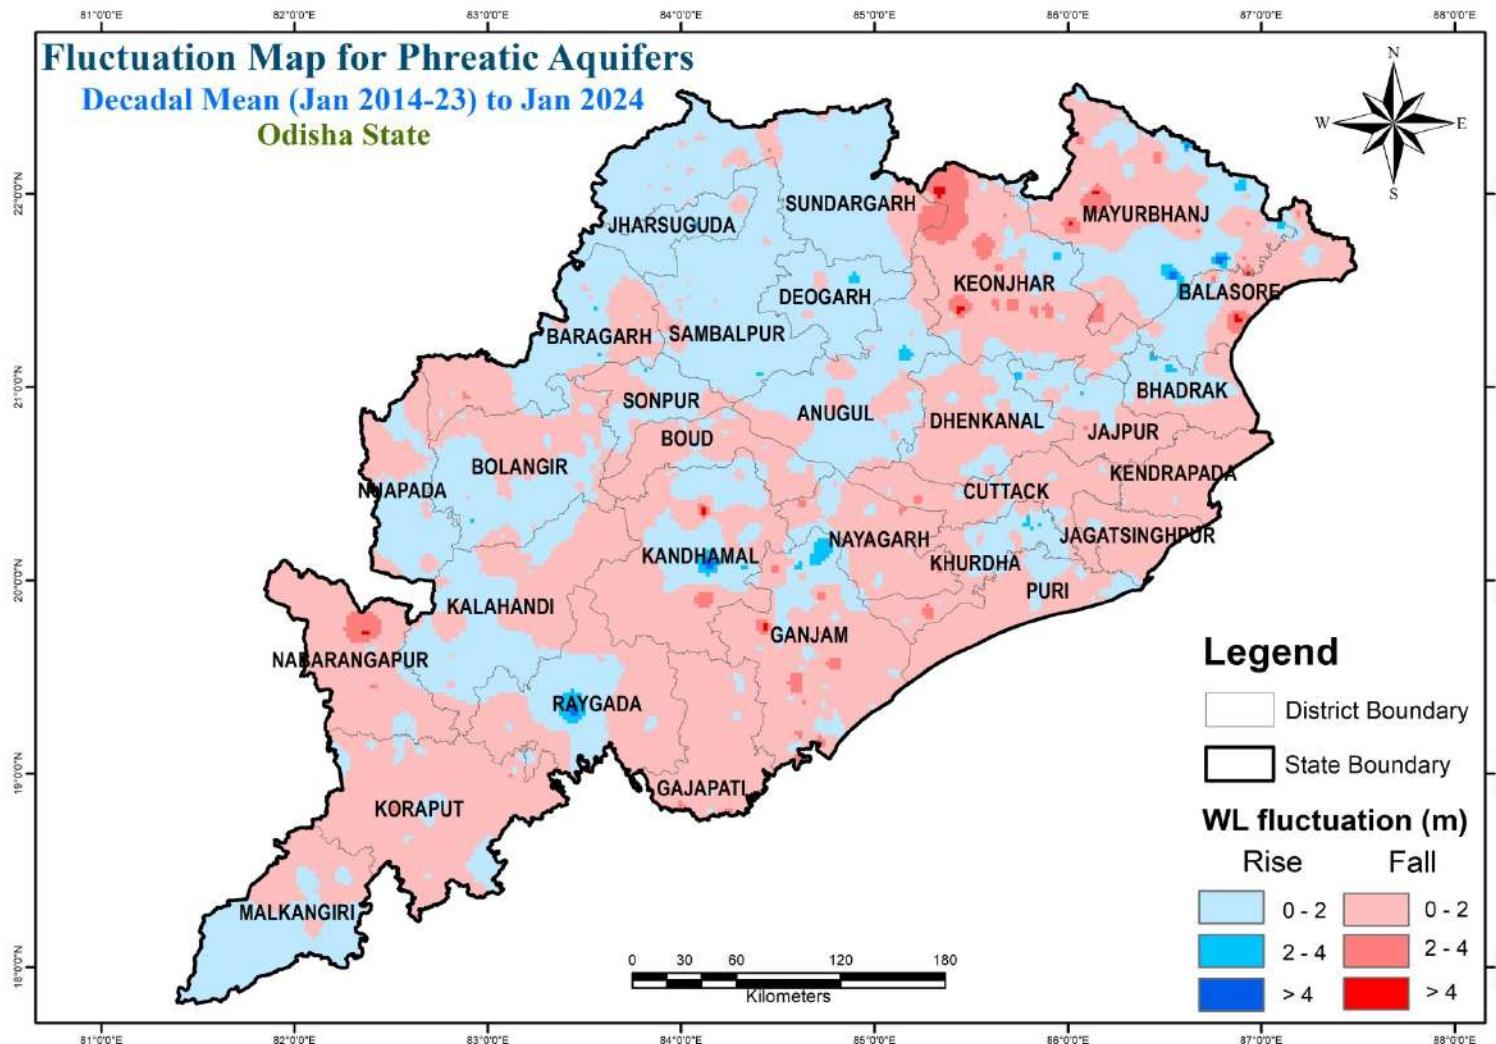

A perusal of the data and map pertaining to January 2024 with reference to decadal mean (2014-23) shows that rise in water level between 0-2m has been observed in 43.19% of the network stations in the state. All the districts have recorded rise of water level in this range. Rise in water level between the ranges of 2-4m has been noticed in 2.92% wells in isolated locations and more than 4m have been observed in 0.57% of wells.

### **Fall in water level**

Fall in water level is seen in patches mostly in the hard rock and hilly terrain of the state. Fall in water level between 0-2 m has been observed in 47.73% of the network monitoring wells in the state. Fall in water level between the ranges of 2-4m has been observed in 4.38% of network wells in the state. Fall in water level of more 4m, is 1.22% of the total wells in the state.

In general a fall has been recorded in water level of January 2024 when compared with the decadal mean (2014-2023). It can be safely concluded that variation in water level is not due to over development; rather the water levels reflect the variation of rainfall in space and time.

## **8.0 BEHAVIOUR OF WATER LEVEL IN DEEPER AQUIFER**

During 2023- 2024 the existing 267 National Hydrograph Network stations (PZs) were monitored four times and behaviour of the ground water regime during the year was inferred comparing the same with the corresponding previous year data and pre-monsoon water level data. On the basis of water level data of Piezometers, for each measurement the following maps have been prepared. Due to paucity of water level data availability for the deeper aquifers, few areas in the map may differ from actual field situation. Locations of piezometers are presented in plate 8.1

1. Depth to water level for each measurement
2. Water level fluctuation in comparison to corresponding period of previous year.
3. Comparison of water levels to Pre-monsoon water levels.

### **8.1. DEPTH TO WATER LEVEL**

#### **DEPTH TO WATER LEVEL OF APRIL 2023**

During April 2023, the water level (meter below ground level) in the state varies from minimum of 0.80 mbgl in Puri district to a maximum of 46.82 mbgl in Kandhamal district and water level mostly ranges from 5 to 10 mbgl. About 4.46% of the piezometers show water level in the range 0-2m, 20.98% of the piezometers show water level in the range of 2-5m, 45.54% of the piezometers show water level in the range of 5-10m and 25% of the piezometers show water level in the range of 10-20m. Only 4.02% piezometers show water level above 20m.

The depth to water level map has been shown in **Plate-8.2.**

#### **DEPTH TO WATER LEVEL OF AUGUST 2023**

During August 2023, the water level (meter below ground level) in the state varies from minimum of 0.01 mbgl in Puri district to a maximum of 40.82 mbgl in Nabarangapur district and water level mostly ranges from 2 to 10 mbgl. About 26.79% of the piezometers show water level in the range 0-2m, 31.70% of the piezometers show water level in the range of 2-5m, 23.21% of the piezometers show water level in the range of 5-10m and 13.39% of the piezometers show water level in the range of 10-20m. Only 4.91% piezometers show water level above 20m.

The depth to water level map has been shown in **Plate-8.3.**

## **DEPTH TO WATER LEVEL OF NOVEMBER 2023**

During November 2023, the water level (meter below ground level) in the state varies from minimum of 0.01 mbgl in Puri district to a maximum of 27.34 mbgl in Kandhamal district and water level mostly ranges from 2 to 10 mbgl. About 11.45% of the piezometers show water level in the range 0-2m, 39.65% of the piezometers show water level in the range of 2-5m, 29.96% of the piezometers show water level in the range of 5-10m and 16.30% of the piezometers show water level in the range of 10-20m. Only 2.64% piezometers show water level above 20m.

The depth to water level map has been shown in **Plate-8.4**.

## **DEPTH TO WATER LEVEL OF JANUARY 2024**

During January 2024, the water level (meter below ground level) in the state varies from minimum of 0.01 mbgl in Puri district to a maximum of 27.22 mbgl in Kandhamal district and water level mostly ranges from 2 to 10 mbgl. About 5.13% of the piezometers show water level in the range 0-2m, 30.77% of the piezometers show water level in the range of 2-5m, 44.02% of the piezometers show water level in the range of 5-10m and 16.24% of the piezometers show water level in the range of 10-20m. Only 3.85% piezometers show water level above 20m.

The depth to water level map has been shown in **Plate-8.5**.

### **8.2.0 FLUCTUATION IN COMPARISON TO CORRESPONDING PERIOD OF PREVIOUS YEAR**

#### **APRIL 2022 - APRIL 2023**

The water level fluctuation of April 2023 with respect to April-2022 shows the entire state showing water level fluctuation ranges from 0 to 2 mbgl. 2 to 4 mbgl fluctuation range shows in Bargarh, Jharsuguda, Keonjhar, Mayurbhanj, Sundargarh, Koraput, Malkangiri and Balangir districts. > 4 mbgl fluctuation range shows in a small part of Keonjhar, Balangir, Koraput, Malkangiri, Bargarh and Jharsuguda districts.

The fluctuation map has been shown in **Plate-8.6**.

#### **AUGUST 2022 - AUGUST 2023**

The water level fluctuation of August 2023 with respect to August-2022 shows most of the districts showing water level fluctuation ranges from 0 to 2 mbgl. 2 to 4 mbgl fluctuation range shows in Malkangiri, Koraput, Nabarangpur, Boudh, Kandhamal, Kendrapara, Bhadrak, Balasore, Dhenkanal, Keonjhar, Jajapur and Mayurbhanj districts. > 4 mbgl fluctuation range shows in a small part of Koraput, Malkangiri, Boudh, Kandhamal, Kendrapara, Balasore, Mayurbhanj, Jajapur and Kendujhar districts.

The fluctuation map has been shown in **Plate-8.7**.

#### **NOVEMBER 2022 - NOVEMBER 2023**

The water level fluctuation of November 2023 with respect to November-2022 shows the entire state showing water level fluctuation ranges from 0 to 2 mbgl. 2 to 4 mbgl fluctuation range shows in Balangir, Kalahandi, Mayurbhanj, Balasore, Cuttack, Khordha, Rayagada, Boudh and Bargarh districts. > 4 mbgl fluctuation range shows in a small part of Khordha, Balasore, Balangir, Rayagada, Kandhamal and Bargarh districts.

The fluctuation map has been shown in **Plate-8.8**.

#### **JANUARY 2023 – JANUARY 2024**

The water level fluctuation of January 2024 with respect to January-2023 shows the entire state showing water level fluctuation ranges from 0 to 2 mbgl. 2 to 4 mbgl fluctuation range shows in Bargarh, Balangir, Sonapur, Boudh, Kandhamal, Koraput, Bhadrak and Balasore districts. > 4 mbgl fluctuation range shows in a small part of Balasore, Bhadrak, Balangir, Bargarh, Kandhamal and Koraput districts.

The fluctuation map has been shown in **Plate-8.9**.

#### **8.2.1 FLUCTUATION WITH RESPECT TO PRE-MONSOON WATER LEVEL**

##### **APRIL 2023 - AUGUST 2023**

The water level fluctuation of August-2023 with respect to April 2023 shows most of the district showing fluctuation range from 0 to 4 mbgl. Coastal and southern part of Odisha shows fluctuation ranges from 0 to 2 mbgl. Central and northern districts and some southern districts of Odisha show 2 to 4 mbgl fluctuation range. > 4 mbgl fluctuation ranges present in scatter manner in Sundargarh, Keonjhar, Dhenkanal, Deogarh, Anugul, Kendrapara, Balangir, Bargarh, Nuapada, Ganjam, Kandhamal, Rayagada, Koraput and Malkangiri districts.

The fluctuation map has been shown in **Plate-8.10**.

##### **APRIL 2023 - NOVEMBER 2023**

The water level fluctuation of November-2023 with respect to April 2023 shows most of the district showing fluctuation range from 0 to 4 mbgl. Central part of Odisha and some northern districts like Kendujhar, Mayurbhanj and Sundargarh and some southern districts like Koraput, Malkangiri shows fluctuation ranges from 0 to 2 mbgl. Central part of Odisha and some northern districts like Balasore, Mayurbhanj shows 2 to 4 mbgl fluctuation range. > 4 mbgl fluctuation ranges present in scatter manner in Baleswar, Mayurbhanj, Bhadrak, Cuttack, Kandhamal, Bargarh, Balangir, Kalahandi, Rayagada, Gajapati and Puri districts.

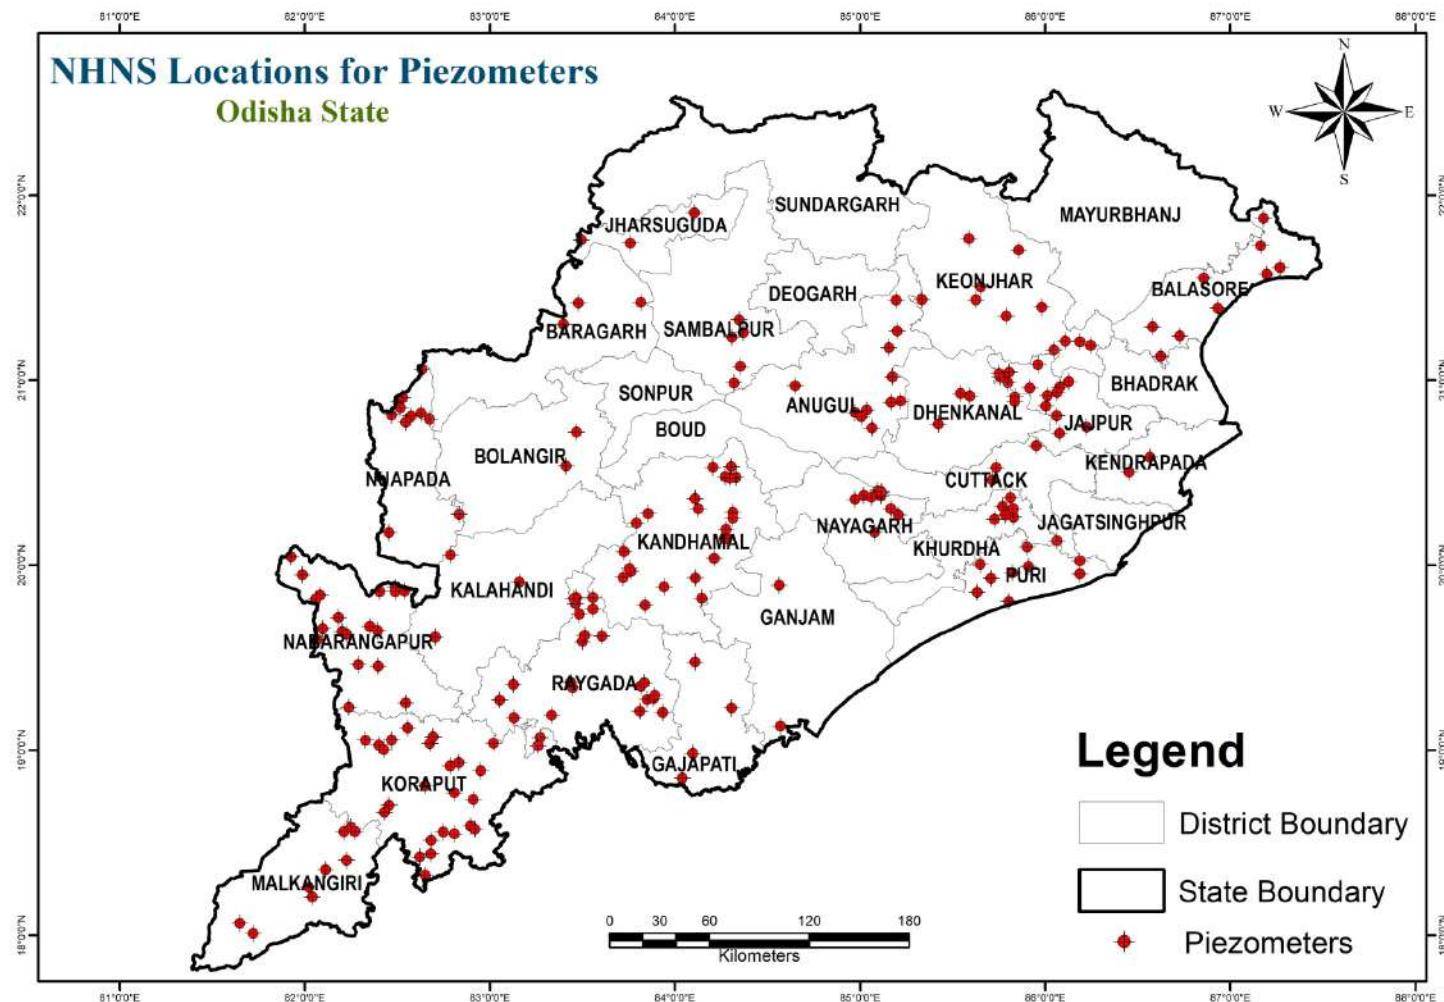

The fluctuation map has been shown in **Plate-8.11**.

#### **APRIL 2023 – JANUARY 2024**

The water level fluctuation of January-2024 with respect to April 2023 shows most of the district showing fluctuation range from 0 to 4 mbgl. Most of the central and northern and southern part of Odisha shows fluctuation ranges from 0 to 2 mbgl. Western and some northern districts of Odisha show 2 to 4 mbgl fluctuation range. > 4 mbgl fluctuation ranges present in scatter manner in Baleshwar, Bhadrak, Sambalpur, Koraput and Kandhamal districts.

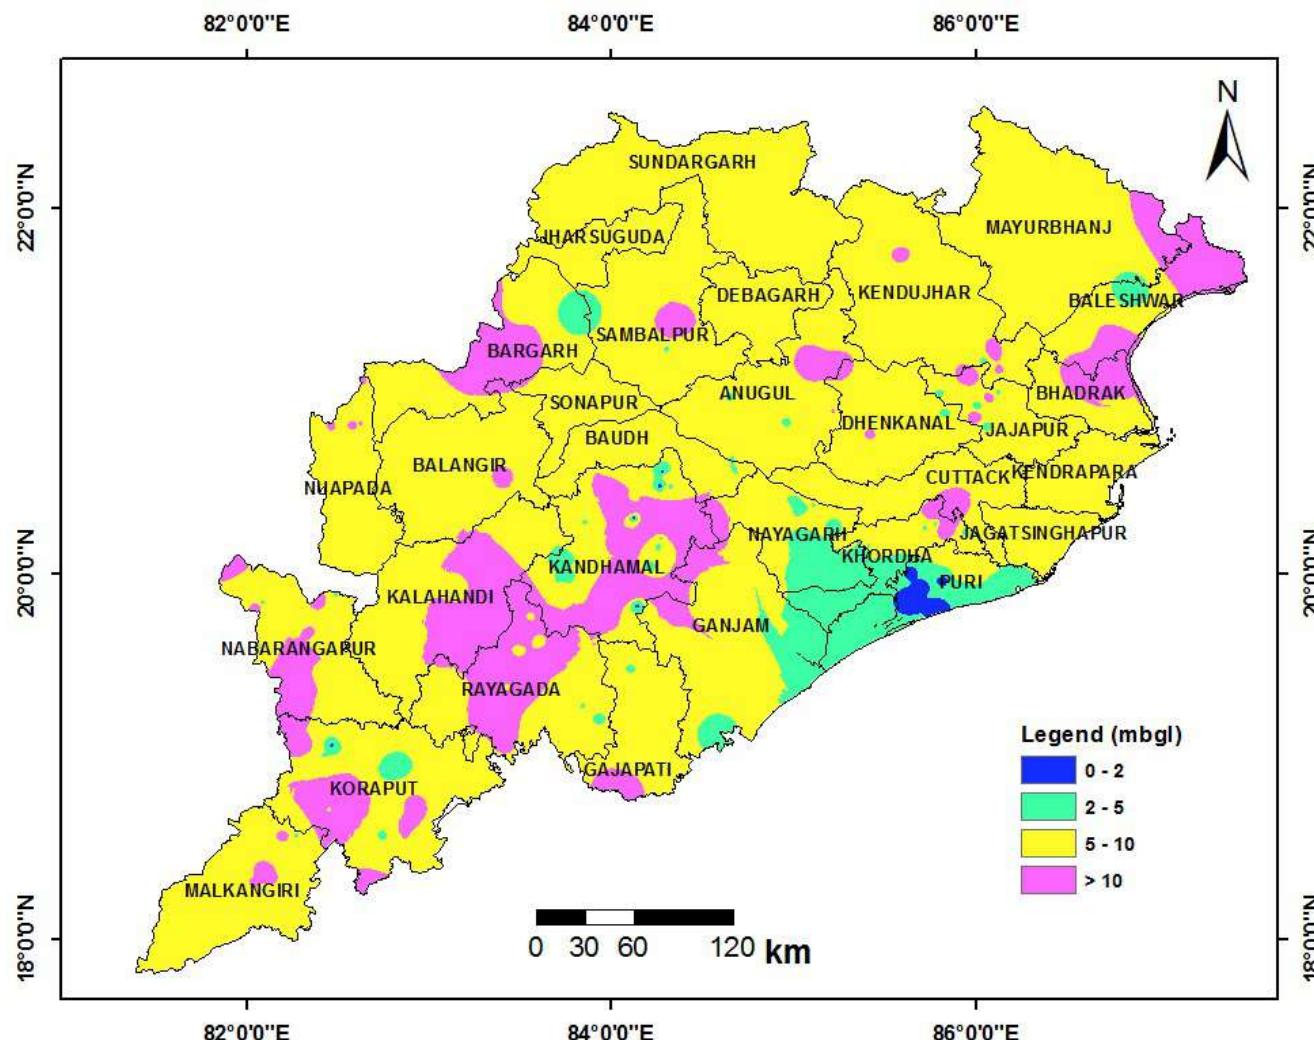

The fluctuation map has been shown in **Plate-8.12**.
