VII	CONCLUSION	84

EXECUTIVE SUMMARY

Central Ground Water Board, an apex Organization under Ministry of Water Resources, Government of India, is carrying out the monitoring of ground water levels all over the country for generating a sound database so that the changes in ground water regime could be scientifically studied, analysed and strategies for its optimal utilization can be planned.

The behaviour of ground water table during the ground water year 2023-24 in the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry has been studied by monitoring a set of dug wells and purpose-built piezometers during the months of May 2023, August 2023, November 2023 and January 2024. As of January 2024, Central Ground Water Board, South Eastern Coastal Region, monitors 674 dug wells and 448 tube wells/piezometers to study the ground water scenario of the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry.

The present compilation relates to the year 2023-24. It provides information pertaining to water levels of the phreatic aquifer. Thematic maps depicting the ground water scenario along with geochemical quality are furnished and discussed in this report. In addition, the fluctuations in water level and piezometric surface between different time frames have been analysed and presented. Various thematic maps presented reflect the effect of rainfall received during the period of study and the long-term behaviour of water level according to ground water recharge and draft conditions obtained in various agro-climatic zones. The data on seasonal rainfall during the year are furnished to correlate the effect of the rainfall on water levels.

In general, the water levels are deep in the month of May and a rising trend of water levels during January (Post-monsoon period) was observed. Water level fluctuation takes place during August, November and January depending on the monsoon rainfall and level of groundwater development.

*Depth to water level during **premonsoon** major part of the State (91% of the wells) except western districts, are < 10m bgl. Whereas the western districts have recorded water level of > 10 m bgl. Water levels < 2 m is observed in 13.9% of wells spreaded as isolated patches in a greater number of districts. Depth to water level in the range of 2 to 5 m bgl has been recorded in 46.62 % of wells analysed and noted in all the districts.*

Depth to water level in the range of 5 to 10 m bgl has been recorded in 30.72 % of wells analysed except Ariyalur and Karaikal. .34 % of wells show depth to water level between 10 to 20 m bgl in Coimbatore, Cuddalore, Dharmapuri, Erode, Kancheepuram, Kanyakumari, Madurai, Namakkal, Perambalur, Salem, Theni, Thiruvallur, Trichy, Tuticorin and Vellore districts.

Less than 1% of wells showing water level more than 20 m bgl which are located as isolated patches in Coimbatore and Namakkal districts.

*During **postmonsoon**, over all 94 % of the wells monitored in the state and UT are in < 10 m bgl range and spreaded over entire Tamil Nadu. 5.79% of the wells have recorded water level between 10 to 20 m and less than 1 % of wells show depth to water level more than 20 m bgl.*

Depth to water level in the range of <2 m bgl has been recorded in 33.68 % of wells analysed and found scattered in all the districts except Tirupathur district. Depth to water level in the range of 2 to 5 m bgl has been recorded in 38.28 % of wells analysed and noted in all the districts and depth to water level in the range of 5 to 10 m bgl has been recorded in 21.81% of wells analysed mainly in Coimbatore, Dharmapuri, Erode, Namakkal, Salem and Tiruchirapalli districts

GROUNDWATER YEARBOOK OF THE STATE OF TAMIL NADU AND PUDUCHERRY AND KARAIKAL REGIONS OF THE UNION TERRITORY OF PUDUCHERRY (2023-2024)

I. 1. INTRODUCTION

The state of Tamil Nadu has a geographical area of 1,30,058 sq. km. and is situated between N. Latitudes 08°00" and 13°30' and E. Longitudes 76°15' and 80°18'. The state is bounded by the Bay of Bengal in the east, the Indian Ocean in the south, the state of Kerala in the west and the states of Karnataka and Andhra Pradesh in the north. For administrative purposes, the state is divided into 38 districts and 1202 developmental Firkas. A major part of the Union Territory of Puducherry comprising Puducherry and Karaikal regions occurs as small enclaves in Tamil Nadu.

The Central Ground Water Board, South Eastern Coastal Region is monitoring the water levels in ground water monitoring wells in the state of Tamil Nadu and Puducherry and Karaikal regions of the Union Territory of Puducherry four times a year, viz. May (between 20th and 31st), August (between 20th and 31st), November (between 1st and 10th) and January (between 1st and 10th). Water samples from the Ground Water Monitoring Wells are collected once in a year i.e. during May. **Table–1** gives the number of Ground Water Monitoring Wells tapping the phreatic aquifers and the piezometers/tube wells/bore wells tapping the deeper semi-confined to confined aquifer during the monitoring months. The behaviour of water levels is analysed with reference to the rainfall pattern. The data are utilised for the assessment of ground water resources, evaluation of the present status of ground water development and also for planning future development. For analytical purposes, only the data of the Ground Water Monitoring Wells tapping phreatic aquifers are considered. The data thus collected are analysed and interpreted and the Ground Water Yearbook is issued annually with interpreted data and thematic maps depicting the ground water scenario.

The results of the chemical analysis of water samples collected from Ground Water Monitoring Wells during May 2023 are also discussed.

The status of district-wise break-up of Ground Water Monitoring Wells is given in **Table–2** and their locations are shown in **Plate I**. The district- wise depth to water level data of the dugwells and depth to piezometric surface of piezometres for the measurements during May 23, August 2023, November 2023 and January 2024, are given as **Annexures I**.

Table-1: Number of Ground Water Monitoring Wells in Tamil Nadu & U.T. of Puducherry during 2023

Period of Measurement	No. of Wells Monitored		
	Dug Wells	Piezometers/ Tubewells	Total
May 2023	755	524	1279
August 2023	733	507	1240
November 2023	701	499	1200
January 2024	674	448	1122

Background information on physiography and drainage, rainfall, hydrogeological conditions, ground water resources development of the state are also furnished in brief for better understanding of the behaviour of water table.

2. PHYSIOGRAPHY

The state of Tamil Nadu is divided into four physiographic units viz. (i) Coastal Plains, (ii) Eastern Ghats, (iii) Central Plateau and (iv) Western Ghats. The coastal plains stretch over a distance of about 998 km. from Pulicat Lake to Cape Comorin, ranging in elevation between 2 and 30 m above mean sea level. The coastal plains are further sub-divided into (a) the Coromandel Coast comprising parts of the districts of Tiruvallur, Kancheepuram and Cuddalore, (b) the alluvial plain of Cauvery delta extending over Nagappattinam, Thanjavur Thiruvallur districts and (c) the dry southern plains comprising parts of Pudukkottai, Ramanathapuram, Tuticorin, Tirunelveli and Kanyakumari districts.

The chain of flat-topped hills of Javadi, the Shevroy, the Kalrayan and the Pachamalai hills, which are joining Cardamom hills in the south, form the Eastern Ghats. These hills rise steeply above plateau level to 1160 m above mean sea level in the Javadi hills and to 1645 m above mean sea level in the Shevroy hills.

Between the Eastern and Western Ghats lies the plateau area known as the "Central Plateau" comprising the districts of Erode and Coimbatore with elevations between 150 and 610 m above mean sea level thereby giving rise to an undulating topography. West of the region lies the broad Palghat gap between the Nilgiri and Anaimalai Hills. Between Cauvery River and the Palghat gap lies an extensive low plateau rising gradually from 120 to 180 m above mean sea level, along the tributaries of the Cauvery River, to 365 to 455 m above mean sea level in the west.

The plateau is fringed on the west by a group of high hills known as the Western Ghats, comprising the western part of the Nilgiri, Madurai and Kanyakumari districts. On the other side of the Palghat gap, the high mountains of the Peninsula dominate. These are the Nilgiri in the north, Anaimalai Hills, Palani and Cardamom hills in the south, with a summit level of 1830 to 2440 m above mean sea level rising sharply from the plateau.

3. DRAINAGE

The state of Tamil Nadu is drained by several major and minor rivers. All the major rivers originate in the Western Ghats and flow eastwards. The Palar, Ponnaiyar, Cheyyar, Kortallaiyar and Araniyar are the important rivers in the north, which are ephemeral and cutting across the centre of the state is the river Cauvery. The Cauvery delta consists of a gently sloping alluvial plain covering an area of 11,600 sq. km. and amongst its tributaries the Bhavani and Amaravathi form the most important sources of canal irrigation in the state. Bhavani, Noyil and Amaravathi rivers originate in the hill ranges of Nilgiri and Anaimalais and flow through matured valleys across the plateau.

The important rivers flowing in the southern part of Tamil Nadu are (i) Vellar (ii) Vaigai (iii) Vaippar and (iv) Tambaraparani. Of these, Tambaraparani River is only perennial, forming a good source of canal irrigation. There are several other minor and less important rivers in the

State. Besides these, there are a number of smaller rivers such as the Aliyar, Sholaiyar, Parambikulam Ar, etc. flowing westwards. Except the perennial rivers, all the rivers remain dry for a good number of months in a year and are not suitable for development of power and major irrigation works. The Pulicat Lake and Kaliveli tank are the important lagoons.

The rivers of the state flow in broad and shallow valleys graded almost to their heads with only slight interruptions of profiles when they pass through the Eastern Ghats. The Western Ghats form the main watershed of the state having numerous waterfalls and Courtallam Falls (91.5 m) is one of the important waterfalls of the state.

4. RAINFALL DISTRIBUTION (SOURCE:IMD)

Rainfall data corresponding to the measurement of water level has been downloaded from the website of India Meteorological Department. As per IMD's classification of monsoon performance over a meteorological subdivision, if the amount of rainfall received over a region (expressed as PDN) is between -19% and +19%, the monsoon performance is termed as *normal*. If the PDN is between -20% and -59%, the region comes under *deficient* category, if PDN is less than or equal to -60%, the region falls under *scanty* category, PDN of +20% to +59% indicates *excess* rainfall category and if the PDN is greater than or equal to +60%, it is termed as *large excess*.

North East Monsoon 2023

The Indian southwest monsoon (SWM) season of June to September is the chief rainy season for India and about 75% of the country's annual rainfall is realised during this season. Subsequent to the withdrawal of SWM, the northeast monsoon (NEM), a small scale monsoon confined to parts of southern peninsular india comprising of the meteorological sub-divisions of Tamil nadu, Puducherry & Karaikal (TN), Kerala & Mahe (KER), coastal Andhra Pradesh & Yanam(cap), Rayalaseema (RYS) and south interior Karnataka (SIK) occurs. For the subdivision of TN, the normal SWM seasonal rainfall realised is only about 36% (328.5 mm) of its annual rainfall (921.4 mm) as this subdivision comes under the rain-shadow region during the SWM. The northeast monsoon (NEM) season of October to December (OND) is the chief rainy season for this subdivision with 48% (442.8 mm) of its annual rainfall realised during this season and hence its performance is a key factor for its regional agricultural activity.

Table-3: Sub-Divisional Seasonal Rainfall during October-December 2023

Subdivision	01 st October – 31 st December 2023		
	Actual (mm)	Normal (mm)	PDN(%)
TAMIL NADU, PUDUCHERRY & KARALKAL	458.9	442.8	+4%

Table-4: Frequency of various categories of spatial rainfall distribution during October to December 2023

	No. of days
--	-------------

State	Widespread	Fairly widespread	Scattered	Isolated	Dry
Tamilnadu & Puducherry	5	16	29	48	1

The intra-seasonal rainfall distribution during Oct-Dec 2023 is presented in monthly, scales. Month-wise rainfall statistics are presented in Table-10.

Table-5: Sub-divisional monthly rainfall during NEM 2023

Sub- division	OCT			NOV			DEC		
	Actual (mm)	Normal (mm)	PDN (%)	Actual (mm)	Normal (mm)	PDN (%)	Actual (mm)	Normal (mm)	PDN (%)
TN&PDU	98.4	171.9	-43%	233	181.7	+28%	127.5	89.2	+43%

Plate-III

District wise rainfall distribution over the Tamilnadu subdivision during Oct, Nov & Dec 2024

Largely Deficient	Deficient	Normal	Excess	Large Excess
≤ -60%	-20% to -59%	-19% to +19%	+20% to +59%	≥ +60%

5. SOILS

The soils of the state can be broadly divided into three type's viz. (1) Red (2) Black and (3) Alluvial soils, of which red soils are the most prominent type. Red soils are found in every district of the state but occupy major parts of the Madurai and Vellore districts. More than 63% of the areal extent of Tiruvallur, Kancheepuram, Salem, Coimbatore, Tirunelveli and Tiruchchirappalli districts is covered by the red soils. Some patches of arenaceous soils are also found along the coastal line. Almost all the alluvial soils in the state are confined to the deltaic regions of the Cauvery River in Cuddalore, Nagapattinam, Tiruvarur, Thanjavur and Tiruchchirappalli districts. Black soils are seen mostly in parts of Ramanathapuram, Cuddalore, Tirunelveli and Thanjavur districts.

6. HYDROGEOLOGY

The state of Tamil Nadu is underlain by geological formations ranging in age from Archaean to Recent. The crystalline rocks of Archaean age like granites, gneisses, charnockites, etc., are of considerable interest as they occupy nearly 73% of the total geographical area of the state. Semi consolidated and consolidated formations ranging in age from Mesozoic to Recent overlie the crystalline basement and their occurrence is confined to the east coast only. The general stratigraphic succession of the formations in the state is presented in Table-11.

Table-6: Stratigraphic Succession of Geological Formations in Tamil Nadu & U.T. Of Puducherry

Era	Age	Stage	Lithology
Quaternary	Recent	-	Soil, alluvium and beach sands
	Pleistocene	-	Boulder conglomerates, older alluvium and laterites.
Tertiary	Pliocene Miocene	Karaikal beds Cuddalore Sandstone	Sands and clay with fossils, Mottled and friable sandstones, buff coloured clays and gravels.
Mesozoic	Cretaceous	Ninniyur	Arenaceous limestones and sandstones.
		Ariyalur	Sandstones and clays
		Trichirapallai	Sandstones, clays and shell limestones
		Uttattur	Basal limestones, coral clays and sandy beds
	Jurassic	Satyavedu	Ferruginous sandstones and conglomerates
		Sriperum- budur	Clays, shales and feldspathic sandstones
		- Unconformity -	
Azoic	Archaean	Archaean	Gneisses, charnockites and ultra-basic intrusives.

The crystalline complex of the Archaean age forms the oldest of the rock types in the state. Pink and grey granites are exposed in Cuddalore, Villuppuram, Coimbatore, Madurai and Tirunelveli districts. Rocks of the Khondalite group are well exposed in the southern districts of Tamil Nadu. The ultra-mafic rocks are widespread in the districts of Vellore, Dharmapuri, Coimbatore and Salem. Charnockite is more prominent in the northwestern part of Tamil Nadu and is well exposed in the hill ranges of Javadi, Shevroy, Palani and Nilgiris.

The Mesozoic era is represented by the upper Gondwanas of Jurassic age and marine beds of Cretaceous age. The Gondwana beds occur as patches spread over nearly 2001 sq. km. in Tiruvallur, Kancheepuram and Vellore districts. The Cretaceous beds are well exposed in Tiruchchirappalli district. The Cretaceous beds overlie the granitic gneisses and charnockites along the western fringe and by alluvium in the north. They are also exposed in Vriddhachalam area of Cuddalore district.

The important Tertiary formations in the state include the Cuddalore sandstones, Karaikal beds and Conjeevaram gravels. They occur in a wide stretch and extend from Karaikudi through Pudukkottai, Thanjavur, Cuddalore, Puducherry to Chennai. Alluvium and coastal sands in the coastal tract and in river valleys overlie them. The Panamparai sandstones of sub-Recent age occur along the coastal tract of Tirunelveli district.

The nature of the geological formations and the structural features are the principal factors governing the occurrence and movement of ground water in any hydrogeological environment.

Ground water in the hard rocks occurs in the weathered zones ranging in thickness from less than a metre to 25 m and in the underlying fractured and sheared zones. It occurs under water table conditions at shallow levels and under semi-confined to confined conditions in the fractured, jointed and sheared zones as seen in Coimbatore, Salem, Dharmapuri, Madurai districts, etc. In the sedimentaries, ground water occurs under water table and confined conditions.

II. DEPTH TO WATER LEVEL (Confined & Unconfined Aquifers)

1. MAY 2023

The statement showing the distribution of ground Water Monitoring wells along with depth to water levels in phreatic aquifer in different depth ranges is presented in **Table-7** and **Plate-IV** depicts the ground water scenario in May 2023.

1. A perusal of the water level data reveals that the depth to water level ranged from 0.1 m bgl (Trichy district) to 39.2 m bgl (Coimbatore District) in Tamil Nadu and UT of Puducherry.
2. Overall 91.25 % of the wells monitored in the state and UT are in <10 m bgl range and spreaded over entire Tamil nadu
3. 8.34 % of wells show depth to water level between 10 to 20 m bgl in Coimbatore, Cuddalore, Dharmapuri, Erode, Kancheepuram, Kanyakumari, Madurai, Namakkal, Perambalur, Salem, Theni, Thiruvallur, Trichy, Tuticorin and Vellore districts.
4. Less than 1 % of wells show depth to water level more than 20 m bgl in Coimbatore and Namakkal districts.
5. Depth to water level of less than 2 m bgl has been recorded in 13.9% of wells analysed and noted in all over the State except Ariyalur, Thiruvarur and UT of Puducherry.
6. Depth to water level in the range of 2 to 5 m bgl has been recorded in 46.62 % of wells analysed and noted in all the districts.
7. Depth to water level in the range of 5 to 10 m bgl has been recorded in 30.72 % of wells analysed except Ariyalur and Karaikal.

Table-7: Depth to Water Table (May 2023)

Table 1: Depth to Water Table (May 2023)							
Distribution of Percentage of Observation Wells							
District	No. of Wells Analysed	Depth to Water Table (mbgl)					
		No. of Wells Showing Depth to Water Table (mbgl) in the Range of					
		0-2	2-5	5-10	10-20	20-40	>40

Depth to Piezometric Surface

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table-8**. The ground water Scenario of Confined aquifer during May 2023 is depicted in **Plate-V**. Salient features of the depth to piezometric surface during May 2023 are given below.

1. The depth to piezometric surface ranged from 0.22 m bgl (Namakkal district) to 97.30 m bgl (Ariyalur District) in Tamil Nadu and UT of Puducherry.
2. 67.94 % of wells have recorded depth to piezometric surface of less than 10mbgl noted in all the districts except in Ariyalur, Thanjavur, Ramanathapuram districts and UT of Puducherry.
3. 14.69 % of wells show depth to piezometric surface between 10 to 20 mbgl noted in all the district except Chennai, Nilgiri, Perambalur, Sivaganga, Thanjavur, Thiruvannamalai and Villupuram districts and Karaikal region.
4. 9.54 % have recorded piezometric surface between 20 to 40mbgl noted in Ariyalur, Coimbatore, Cuddalore, Dindigul, Erode, Karur, Krishnagiri, Madurai, Nagapattinam, Sivaganga, Theni and Thiruvavarur districts.
5. 7.82% have recorded more than 40 mbgl noted in Ariyalur, Cuddalore, Dindigul, Theni, Tirunelveli, Vellore and Villupuram districts.
6. Depth to piezometric surface of less than 2 m bgl has been recorded in 7.06 % of wells analysed and this has been noted in Coimbatore, Dindigul, Erode, Kancheepuram, Karur, Madurai, Namakkal, Pudukkottai, Theni, Thiruvannamalai, Tirunelveli, Tiruppur, Trichy, Vellore and Villupuram districts.
7. Depth to piezometric surface in the range of 2 to 5 m bgl has been recorded in 29 % of wells analysed and noted in all the districts except in the districts of Ariyalur, Nilgiri, Ramanathapuram, Thanjavur, Tiruvarur, Pondicherry and Karaikal Region.
8. Depth to piezometric surface in the range of 5 to 10 m bgl has been recorded in 31 % of wells analysed and noted in all the districts except in the districts such as Ariyalur, Chennai, Ramanathapuram, Thanjavur, Tiruvarur, Karaikal and UT of Pondicherry.

2. AUGUST 2023

The statement showing the distribution of ground Water Monitoring wells along with depth to water levels in phreatic aquifer in different depth ranges is presented in **Table-9** and **Plate-VI** depicts the ground water scenario in August 2023.

1. A perusal of the water level data reveals that the depth to water level ranged from 0.25 m bgl (Tiruvallur district) to 56.98 m bgl (Tirupathur District) in Tamil Nadu and UT of Puducherry.
2. Overall 88 % of the wells monitored in the state and UT are in <10 m bgl range and spreaded over entire Tamil nadu
3. 9.55 % of wells show depth to water level between 10 to 20 m bgl in Coimbatore, Dharmapuri, Erode, Dindigul, Vellore, Tuticorin, Salem, Theni, Tiruppur, Thenkasi and Tiruvannamalai districts.
4. 1 % of wells show depth to water level more than 20 m bgl in Coimbatore, Tirupathur, Tiruppur and Namakkal districts.
5. Depth to water level of less than 2 m bgl has been recorded in 12.01 % of wells analysed and noted in all over the State except Velllore, Tenkasi, Tirupathur, Erode, Kancheepuram, Kanyakumari, Namakkal, UT of Puducherry and Karaikal region.
6. Depth to water level in the range of 2 to 5 m bgl has been recorded in 42.84 % of wells analysed and noted in all the districts.
7. Depth to water level in the range of 5 to 10 m bgl has been recorded in 34.52 % of wells analysed except Tiruvarur, Mayiladuthurai and Karaikl.

Depth to Piezometric Surface

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table-10**. The ground water scenario of Confined aquifer in August 2023 is presented in **Plate-VII**. Salient features of the depth to piezometric surface during August 2023 are given below.

1. The depth to piezometric surface ranged from 0.2 m bgl (Chennai district) to 97.32 m bgl (Ariyalur District) in Tamil Nadu and UT of Puducherry.
2. 60 % of wells have recorded depth to piezometric surface of less than 10mbgl noted mainly in Chengalpattu, Chennai, Coimbatore, Dindigul, Erode, Karur, Madurai, Namakkal, Pudukkottai, Ranipet, Tiruvannamalai, Tiruppur and Villupuram districts.
3. 16.77 % of wells show depth to piezometric surface between 10 to 20 mbgl noted in all the district except Ariyalur, Chengalpattu, Kallakurichi, Kancheepuram, Nagapattinam, Perambalur, Ranipet, Salem, Sivaganga, Thanjavur, Tiruvannamalai and Villupuram districts and Karaikal region.
4. 10.85 % have recorded piezometric surface between 20 to 40 mbgl noted in Coimbatore, Cuddalore, Dindigul, Krishnagiri, Theni, Tirunelveli and UT of Puducherry.
5. 10.65 % have recorded more than 40 mbgl noted in Ariyalur, Cuddalore, Villupuram and Tiruppur districts.
6. Depth to piezometric surface of less than 2 m bgl has been recorded in 5.33 % of wells analysed and this has been noted in Chengalpattu, Chennai, Karur, Madurai, Namakkal, Pudukkottai, Ranipet, Tiruvannamalai and Villupuram districts.
7. Depth to piezometric surface in the range of 2 to 5 m bgl has been recorded in 22.88 % of wells analysed and noted in all the districts except in the districts of Ariyalur, Cuddalore, Mayiladuthurai, Nilgiris, Ramanathapuram, Sivaganga, Thanjavur, Tenkasi and Tiruvarur districts.
8. Depth to piezometric surface in the range of 5 to 10 m bgl has been recorded in 33.53 % of wells analysed and noted in all the districts except in the districts such as Ariyalur, Ramanathapuram, UT of Puducherry and Karaikal Region.

3. NOVEMBER 2023

The statement showing the distribution of Ground Water Monitoring wells along with depth to water level of phreatic aquifer in different depth ranges is presented in **Table-11 and Plate-VIII** depicts the ground water scenario in November 2023. Salient features of the depth to water level scenario during November 2023 are given below.

1. A perusal of the water level data reveals that the depth to water level ranged from 0.08 m bgl (Chennai & Cuddalore district) to 41.62 m bgl (Coimbatore District) in Tamil Nadu and UT of Puducherry.
2. Overall 92 % of the wells monitored in the state and UT are in <10 m bgl range and spreaded over entire Tamil nadu
3. 6.28 % of wells show depth to water level between 10 to 20 m bgl in Coimbatore, Dharmapuri, Erode, Dindigul, Namakkal, Salem, Tiruppur and Tiruchirapalli districts.
4. 1 % of wells show depth to water level more than 20 m bgl in Coimbatore, Madurai, Erode, Namakkal, Tiruppur and Tirunelveli districts.
5. Depth to water level of less than 2 m bgl has been recorded in 23.82 % of wells analysed and noted in all over the State except, Kallakurichi, Mayiladuthurai and UT of Puducherry.
6. Depth to water level in the range of 2 to 5 m bgl has been recorded in 41.94 % of wells analysed and noted in all the districts except Kallakurichi and Mayiladuthurai.
7. Depth to water level in the range of 5 to 10 m bgl has been recorded in 26.53 % of wells analysed except Kallakurichi, Mayiladuthurai and Karaikl region

Depth to Piezometric Surface

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table-12**. The ground water scenario of Confined aquifer during November 2023 is depicted in **Plate-IX**. Salient features of the depth to piezometric surface during November 2023 are given below.

1. The depth to piezometric surface ranged from 0.09 m bgl (Chennai district) to 100 m bgl (Cuddalore District) in Tamil Nadu and UT of Puducherry.
2. 66 % of wells have recorded depth to piezometric surface of less than 10mbgl noted mainly in Chennai, Coimbatore, Dindigul, Erode, Karur, Madurai, Namakkal, Pudukkottai, Ranipet, Tiruvannamalai, Tiruppur and Villupuram districts.
3. 14.63 % of wells show depth to piezometric surface between 10 to 20 mbgl noted in all the district except Ariyalur, Chengalpattu, Kallakurichi, Kancheepuram, Ranipet, Salem, Sivaganga, Thanjavur, Tiruvannamalai and Villupuram districts and Karaikal region.
4. 9.22 % have recorded piezometric surface between 20 to 40mbgl noted in Ariyalur, Coimbatore, Cuddalore, Dindigul, Karur, Krishnagiri, Madurai, Theni, Tirunelveli, Ramanathapuram, Sivaganga and UT of Puducherry.
5. 10.42 % have recorded more than 40 mbgl noted in Ariyalur, Coimbatore, Cuddalore, Tiruvallur, Karur and Tiruppur districts.
6. Depth to piezometric surface of less than 2 m bgl has been recorded in 11.82 % of wells analysed and this has been noted in Chennai, Coimbatore, Dindigul, Erode, Madurai, Tiruvannamalai, Tirunelveli and Villupuram districts.
7. Depth to piezometric surface in the range of 2 to 5 m bgl has been recorded in 26.05 % of wells analysed and noted in all the districts except in the districts of Ariyalur, Cuddalore, Mayiladuthurai, Nilgiris, Ramanathapuram, Sivaganga, Thanjavur, and Tiruvarur districts.
8. Depth to piezometric surface in the range of 5 to 10 m bgl has been recorded in 27.86 % of wells analysed and noted in all the districts except in the districts such as Ariyalur, Chengalpattu, Kallakurichi, Kancheepuram, Ramanathapuram, Thanjavur, Tiruvarur, Karaikal and UT of Pondicherry.

JANUARY 2024

The statement showing the distribution of ground Water Monitoring wells along with depth to water levels in phreatic aquifer in different depth ranges is presented in **Table-13** and **Plate-X** depicts the ground water scenario in January 2024. Salient features of the depth to water level scenario during January 2024 are given below.

1. A perusal of the water level data reveals that the depth to water level ranged from 0.02m bgl (Theni district) to 44 m bgl (Perambalur District) in Tamil Nadu and UT of Puducherry.
2. Overall 93.77 % of the wells monitored in the state and UT are in <10 m bgl range and spread over entire Tamil Nadu
3. 5.79 % of wells show depth to water level between 10 to 20 m bgl in Dharmapuri, Erode, Salem, Tiruppur and Coimbatore districts.
4. <1 % of wells show depth to water level more than 20 m bgl in Coimbatore and Namakkal districts.
5. Depth to water level of less than 2 m bgl has been recorded in 33.68 % of wells analysed and noted in all over the State except Tirupathur district.
6. Depth to water level in the range of 2 to 5 m bgl has been recorded in 38.28 % of wells analysed and noted in all the districts.
7. Depth to water level in the range of 5 to 10 m bgl has been recorded in 21.81 % of wells analysed mainly in Coimbatore, Dharmapuri, Erode, Namakkal, Salem and Tiruchirapalli districts.

Table 13: Depth to Water Table (January 2024)							
Distribution of Percentage of Observation Wells

Depth to Piezometric Surface:

Depth to piezometric surface has been recorded from piezometers spread all over the state both in hardrock and soft rock areas. The statement showing the depth to piezometric surface is given in **Table-14**. The ground water Scenario of Confined aquifer during January 2024 is depicted in **Plate-XI**. Salient features of the depth to piezometric surface during January 2024 are given below.

1. The depth to piezometric surface ranged from 0.13 m bgl (Madurai district) to 94.1 m bgl (Cuddalore District) in Tamil Nadu and UT of Puducherry.
2. 70.31 % of wells have recorded depth to piezometric surface of less than 10mbgl noted all over the State except Ariyalur, Nilgiris, Ramanathapuram and Tiruvarur districts.
3. 12.50 % of wells show depth to piezometric surface between 10 to 20 mbgl noted mainly in Coimbatore, Dindigul, Erode, Krishnagiri, Theni, Tiruppur and UT of Puducherry.
4. 7.59 % have recorded piezometric surface between 20 to 40mbgl noted in Cuddalore, Krishnagiri, Theni and UT of Puducherry.
5. 9.60 % have recorded more than 40 mbgl noted in Ariyalur, Cuddalore, Coimbatore, Madurai, Pudukkottai and Vellore districts.
6. Depth to piezometric surface of less than 2 m bgl has been recorded in 19.87 % of wells analysed and this has been noted in all the districts except Ariyalur, Cuddalore, Dharmapuri, Tiruvarur and UT of Puducherry and Karaikal region.
7. Depth to piezometric surface in the range of 2 to 5 m bgl has been recorded in 26.56 % of wells analysed and noted in all the districts except Ariyalur, Chennai, Tiruvarur, Tirupathur, Ramanathapuram and UT of Puducherry and Karaikal region.
8. Depth to piezometric surface in the range of 5 to 10 m bgl has been recorded in 23.88 % of wells analysed and noted mainly in Erode, Coimbatore, Madurai, Namakkal, Pudukkottai, Salem and Vellore districts.

FLUCTUATION OF WATERLEVEL

The water level fluctuation denotes the cumulative effect of southwest and northeast monsoons and ground water development during the period. Rise denotes adequate compensation of the ground water development and fall denotes inadequacy of recharge.

Two types of fluctuations have been calculated, viz. 1) Decadal and 2) Annual fluctuations

IV. DECADAL FLUCTUATION (Confined and Unconfined Aquifers)

Fluctuation between Decadal Mean Water Level & Water Level

The fluctuation of water level recorded during the particular period with respect to decadal mean of the same period indicate the impact of ground water development and ground water recharge during the decade. Positive fluctuation indicates improved recharge over and above ground water development and negative fluctuation indicates increased ground water development over and above the recharge.

1. MEAN WATER LEVELS MAY 2013-2022&MAY 2023

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-15** and **Plate-XVIII**. A comparison of water levels shows that a rise in the water level is recorded in 74.75 % of wells analysed, while 25.25 % recorded fall. While rise is more in 0-2 m range and the fall is also in the same range.

1. The most of the districts of Tamilnadu and UT of Puducherry have recorded rise in more than 50% wells except Ramanathapuram, Tirunelveli and Tuticorin.
2. Rise in the water level in the range of 0-2m has been observed in 30.84 % of wells analysed, noted all over the State and UT of Puducherry.
3. Rise in the water level of 2 to 4 m has been observed in 19.29 % and of wells analysed and noted all over the state except Ariyalur, Karaikal, UT of Puducherry, Tiruvarur and Tuticorin.
4. Rise in the water level more then 4 m has been observed in 24.62 % and of wells analysed and noted all over the state except Karaikal, UT of Puducherry, Kanyakumari, Nilgiri, Ramanathapuram and Tiruvarur districts.
5. The fall in water level in the range of 0-2m has been observed in 20.56 % of wells analysed and spread most the districts in the State and U.T. of Puducherry except Karaikal and Sivaganga.
6. The fall in water level in the range of 2-4m has been observed in 3.30 % of wells analysed and noted mainly in Coimbatore, Dindigul, Kanyakumari, Namakkal, Salem, Tiruvallur, Tuticorin and Villupuram districts.
7. The fall in water level more than 4 m has been observed in 1.40 % of wells analysed and noted as isolated pockets mainly in Coimbatore, Dharmapuri, Erode, Pudukkottai, Tirunelveli, Tiruvallur, Tuticorin, and Villupuram districts.

Confined Aquifer

The Piezometric surface data of May 2023 were compared with mean water level for the period May 2013-2022. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-16** and **Plate-XIX**.

A comparison of water level shows a rise in 74.50 % and a fall in 25.5% of the wells. While rise is more in >4 m range the fall is mainly in 0-2 m range.

1. The entire state and Puducherry region of UT of Puducherry have recorded rise in more than 50% wells, except Ariyalur and Kancheepuram
2. Rise in the water level in the range of 0-2m has been observed in 23.76 % of wells analysed, spread all over the State except in Karaikal, Perambalur, Nagapattinam, Nilgiri, Ramanathapuram, Sivaganga, Thanjavur, Tiruvarur and Tiruvallur districts.
3. Rise in the water level in the range of 2-4 m has been observed in 15.1 % of wells analysed and noted mainly in Coimbatore, Cuddalore, Erode, Madurai, Villupuram, Virudhunagar and Theni districts
4. Rise in water level more than 4 m has been observed in 35.64 % of wells analysed and noted major part of the state except in Chennai, Kanyakumari, Karaikal, Nagapattinam, Nilgiri, Pudukottai, Ramanathapuram, Thanjavur, Tiruvarur and Tiruvallur districts.
5. The fall in water level in the range of 0-2m has been observed in 15.59 % of wells analysed and noted in Ariyalur, Coimbatore, Cuddalore, Erode, Kancheepuram, Tirunelveli, Nagapattinam, Tuticorin and Vellore districts and UT of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 1.73 % of wells analysed and noted mainly in Coimbatore, Cuddalore, Kanyakumari, Tirunelveli, Theni and Kancheepuram districts.
7. Fall in water level more than 4 m has been observed in 8.17 % of wells analysed and noted mostly Ariyalur, Cuddalore, Coimbatore, Tirunelveli, and Tuticorin districts.

2. MEAN WATER LEVELS AUGUST 2013-2022 & AUGUST 2023

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-17** and **Plate-XX**. A comparison of water levels shows that a rise in the water level is recorded in 78.84 % of wells analysed, while 21.16 % recorded fall. While rise is more in 0-2 m range and the fall is also in the same range.

1. The most of the districts of Tamilnadu and UT of Puducherry have recorded rise in more than 50% wells except Kanyakumari.
2. Rise in the water level in the range of 0-2m has been observed in 41.49 % of wells analysed, noted all over the State and UT of Puducherry.
3. Rise in the water level of 2 to 4 m has been observed in 21.99 % and of wells analysed and noted all over the state except Karaikal, UT of Puducherry and Kanyakumari district.
4. Rise in the water level more than 4 m has been observed in 15.35 % and of wells analysed and noted mainly in Chengalpattu, Coimbatore, Dindigul, Namakkal and Tiruchirapalli district.
5. The fall in water level in the range of 0-2m has been observed in 16.04 % of wells analysed and spread most the districts in the State and U.T. of Puducherry except Karaikal, Perambalur and Tiruvarur districts.
6. The fall in water level in the range of 2-4m has been observed in 3.46 % of wells analysed and noted mainly in Coimbatore, Erode and Tirunelveli districts.
7. The fall in water level more than 4 m has been observed in 1.66 % of wells analysed and noted as isolated pockets mainly in Tuticorin, Tiruvannamalai, Tirupathur and Ariyalur districts.

Confined Aquifer

The Piezometric surface data of August 2023 were compared with mean water level for the period August 2013-2022. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-18 and Plate XXI**. A comparison of water level shows a rise in 78.73 % and a fall in 21.27% of the wells. While rise is more in >4 m ranges the fall is mainly in 0-2 m range.

1. The entire state and Puducherry region of UT of Puducherry have recorded rise in more than 50% wells.
2. Rise in the water level in the range of 0-2m has been observed in 24.05 % of wells analysed, spread all over the State except in Karaikal, Nilgiri, Ramanathapuram and Tiruvarur districts.
3. Rise in the water level in the range of 2-4 m has been observed in 25.06 % of wells analysed all over the State except Dharmapur, Thanjavur, Tirupathur and UT of Puducherry and Karaikal region.
4. Rise in water level more than 4 m has been observed in 29.62 % of wells analysed and noted major part of the state except in Kancheepuram, Kanyakumari, Nagapattinam, Pudukkottai, Thanjavur
5. The fall in water level in the range of 0-2m has been observed in 8.86 % of wells analysed and noted in Coimbatore, Erode, Kanyakumari, Madurai and Tiruppur districts.
6. The fall in water level in the range of 2-4m has been observed in 3.80 % of wells analysed and noted mainly in Coimbatore, Cuddalore and Tuticorin districts.
7. Fall in water level more than 4 m has been observed in 8.61 % of wells analysed and noted mostly Ariyalur, Cuddalore, Coimbatore, Tirunelveli, and UT of Puducherry.

3. Mean Water Level November 2013-2022 & November 2023

The statement showing the distribution of ground water monitoring wells falling in different ranges of fluctuation is presented in **Table-19** and **Plate-XXII**. A comparison of water levels shows that a rise in the water level is recorded in 73.10 % of wells analysed, while 26.90 % recorded fall. While rise is more in 0-2 m range and the fall is also in the same range.

1. Most of the districts of Tamilnadu and UT of Puducherry have recorded rise in more than 50% wells except Ramanathapuram, Cuddalore, Nagapattinam, Thanjavur and Tuticorin.
2. Rise in the water level in the range of 0-2m has been observed in 38.91 % of wells analysed, noted all over the State and UT of Puducherry.
3. Rise in the water level of 2 to 4 m has been observed in 18.74 % and of wells analysed and noted all over the state except Ariyalur, Cuddalore, Kancheepuram, Nagapattinam and Tiruvarur.
4. Rise in the water level more than 4 m has been observed in 15.45 % and of wells analysed and noted in Chengalpattu, Dharmapuri, Dindigul, Erode, Madurai, Namakkal, Perambalur and Virudhunagar district.
5. The fall in water level in the range of 0-2m has been observed in 20.89 % of wells analysed and spread most the districts in the State and U.T. of Puducherry except Karaikal, Kanyakumari, Madurai, and Perambalur.
6. The fall in water level in the range of 2-4m has been observed in 4.29 % of wells analysed and noted mainly in Coimbatore, Cuddalore, Dindigul, Erode, Ramanathapuram, Tirunelveli and Tiruppur district.
7. The fall in water level more than 4 m has been observed in 1.72 % of wells analysed and noted as isolated pockets mainly in Coimbatore, Dharmapuri, Erode, Madurai and Tuticorin districts.

Confined Aquifer

The Piezometric surface data of November 2023 were compared with mean water level for the period November 2013-2022. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in Table-20 and Plate XXIII. A comparison of water level shows a rise in 62.11 % and a fall in 37.89% of the wells. Rise is more in 0-2 m range and the fall is also mainly in 0-2 m range.

1. The entire state and Puducherry region of UT of Puducherry have recorded rise in more than 50% wells, except Ariyalur, Coimbatore, Cuddalore, Tuticorin and Tirunelveli districts.
2. Rise in the water level in the range of 0-2m has been observed in 24.43 % of wells analysed, spread all over the State except in Karaikal, Dharmapuri, Kallakurichi, Mayiladuthurai, Nagapattinam, Pudukkottai, Tirupathur and Tiruvarur districts.
3. Rise in the water level in the range of 2-4 m has been observed in 18.22 % of wells analysed and noted all over the State except in Ariyalur, Kallakurichi, Kancheepuram, Mayiladuthurai, Nagapattinam, Tirupathur, Tirunelveli and Tiruvarur districts.
4. Rise in water level more than 4 m has been observed in 19.46 % of wells analysed and noted major part of the state except in Chennai, Kanyakumari, Karaikal, Chengalpattu, Nagapattinam and Ramanathapuram districts.
5. The fall in water level in the range of 0-2m has been observed in 18.84 % of wells analysed and noted in all over the State except Dharmapuri, Dindigul, Mayiladuthurai, and UT of Puducherry and Karaikal region.
6. The fall in water level in the range of 2-4m has been observed in 6.42 % of wells analysed and noted mainly in Ariyalur, Coimbatore, Cuddalore, Erode, Krishnagiri, Madurai and Pudukkottai districts.
7. Fall in water level more than 4 m has been observed in 12.63 % of wells analysed and noted mostly Ariyalur, Cuddalore, Coimbatore, Krishnagiri and Tirunelveli districts.

4. Mean Water Level January 2014-2023 & January 2024

The distribution of hydrograph network stations falling in different ranges of fluctuation is presented in **Table-21** and **Plate- XXIV**. A comparison of water levels shows that a rise in the water level is recorded in 82.62 % of wells analysed, while 17.38 % recorded fall. While rise is more in 0-2 m range and the fall is also in the same range.

1. The most of the districts of Tamilnadu and UT of Puducherry have recorded rise in more than 50% wells.
2. Rise in the water level in the range of 0-2m has been observed in 44.58 % of wells analysed, noted all over the State and UT of Puducherry except Virudhunagar.
3. Rise in the water level of 2 to 4 m has been observed in 23.48 % and of wells analysed and noted all over the state except Coimbatore District.
4. Rise in the water level more than 4 m has been observed in 14.56 % and of wells analysed and noted all over the state except Ariyalur, Cuddalore, Nagapattinam and UT of Puducherry.
5. The fall in water level in the range of 0-2m has been observed in 13.37 % of wells analysed and spread most the districts in the State and U.T. of Puducherry except Karaikal, Chennai, Kancheepuram and Theni district.
6. The fall in water level in the range of 2-4m has been observed in 2.23 % of wells analysed and noted mainly in Dindigul, Erode and Namakkal districts.
7. The fall in water level more than 4 m has been observed in 1.78 % of wells analysed and noted as isolated pockets mainly in Namakkal, Tiruchirapalli, Tiruppur and Dharmapuri districts.

Confined Aquifer:

The Piezometric surface data of January 2024 were compared with mean water level for the period January 2014-2023. The district-wise distribution of Ground water monitoring wells rising and falling in different ranges of water level fluctuation is presented in **Table-22 and Plate XXV**. A comparison of water level shows a rise in 80.65 % and a fall in 19.35% of the wells. Rise is more in >4 m range and the fall is mainly in 0-2 m range.

1. The entire state and Puducherry region of UT of Puducherry have recorded rise in more than 50% wells
2. Rise in the water level in the range of 0-2m has been observed in 28.88 % of wells analysed, spread all over the State except in Chennai, Nagapattinam, Thanjavur and Karaikal Region.
3. Rise in the water level in the range of 2-4 m has been observed in 19.89 % of wells analysed and noted all over the State except in Chennai, Dindigul, Karaikal, Nilgiris, Tiruvallur and Tiruvarur districts.
4. Rise in water level more than 4 m has been observed in 31.88 % of wells analysed and noted mainly in Cuddalore, Erode, Madurai, Salem, Theni and Tiruppur districts.
5. The fall in water level in the range of 0-2m has been observed in 10.35 % of wells analysed and noted mainly in Cuddalore, Erode, Namakkal and Pudukkottai districts.
6. The fall in water level in the range of 2-4m has been observed in 3 % of wells analysed and noted mainly in Coimbatore, Tiruvannamalai, Dharmapuri, Karur and Madurai districts.
7. Fall in water level more than 4 m has been observed in 5.99 % of wells analysed and noted mostly in Cuddalore, Dindigul, Ariyalur and Krishnagiri districts.

V. ANNUAL FLUCTUATION

Annual fluctuation of water level is calculated by comparing the water level of the particular period during last year with water level of the same period of current year. This indicates the impact of ground water development and ground water recharge during one year. Positive fluctuation indicates improved recharge over and above ground water development and negative fluctuation indicates increased ground water development over and above the recharge.

1. WATER LEVELS FOR THE PERIOD MAY 2022 & MAY 2023

The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-23** and **Plate- XXVI**. A comparison of water level shows a rise in 21.06 % and a fall in 78.94 % of the wells. Both the the rise and fall is mainly in 0-2 m range.

1. The entire state and UT of Puducherry have recorded fall in more than 50% wells except Theni, Tiruvarur and Karaikal.
2. Rise in the water level in the range of 0-2m has been observed in 15.17% of wells analysed, and found all over the state except Ariyalur, Kanyakumari, Nagapattinam, Perambalur, Tuticorin and UT of Pondicherry.
3. Rise in the water level in the range of 2-4 m has been observed in 3.98 % of wells analysed and mainly noted in Chennai, Dindigul, Erode, Madurai, Namakkal and Tiruvallur districts.
4. Rise in water level more than 4 m has been observed in 1.91 % of wells analysed and noted mainly in Coimbatore, Erode and Namakkal district.
5. The fall in water level in the range of 0-2m has been observed in 53.31 % of wells analysed and noted all over the state and UT of Puducherry.
6. The fall in water level in the range of 2-4m has been observed in 17.38 % of wells analysed and noted all over the state except Chennai, Karur, Krishnagiri, Madurai, Nagapattinam and Tiruvarur districts.
7. Fall in water level more than 4 m has been observed in 8.25 % of wells analysed and noted isolated patches in some districts mainly in Coimbatore, Cuddalore, Dharmapuri, Erode, Kanyakumari, Namakkal, Salem, Tirunelveli, Tiruvannamalai, Tuticorin and Villupuram district.

Confined Aquifer:

The Piezometric surface data of May 2023 were compared with that of May 2022. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-24 and Plate XXVII**. A comparison of water level shows a rise in 32.07 % and a fall in 67.93 % of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The Most of the Districts of the state have recorded fall in more than 50% wells except few districts.
2. Rise in the water level in the range of 0-2m has been observed in 22.55% of wells analysed, spread all over the State, predominantly in Coimbatore, Cuddalore, Erode, Tiruvannamalai, Madurai and Theni districts.
3. Rise in the water level in the range of 2-4 m has been observed in 4.62 % of wells analysed and noted mainly in Coimbatore, Erode, Krishnagiri, Theni and Vellore districts.
4. Rise in water level more than 4 m has been observed in 4.89 % of wells analysed and noted in Coimbatore, Cuddalore, Namakkal, Erode, Theni and UT of Pondicherry.
5. The fall in water level in the range of 0-2m has been observed in 40.22 % of wells analysed and noted all over the state except Thanjavur, Tiruvarur, Tiruvallur and Karaikal.
6. The fall in water level in the range of 2-4m has been observed in 15.76 % of wells analysed and noted in some districts particularly in Ariyalur, Coimbatore, Cuddalore, Erode, Kancheepuram, Kanyakumari, Perambalur, Tirunelveli, Tiruvannamalai and Villupuram districts.
7. Fall in water level more than 4 m has been observed in 11.96 % of wells analysed and noted mostly in Ariyalur, Cuddalore, Erode, Tirunelveli and Tuticorin districts.

2. WATER LEVELS FOR THE PERIOD AUGUST 2022 & AUGUST 2023

The water level data for August 2023 were compared with water level for the period August 2022. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-25** and **Plate-XXVIII**. A comparison of water level shows a rise in 49.86 % and a fall in 50.14 % of the wells. Both rise and fall is mainly in 0-2 m range.

1. The entire state and UT of Puducherry have recorded fall in more than 50% wells except Chengalpattu, Chennai, Cuddalore, Dindigul, Pudukkottai, Tiruppur and Tiruvallur districts.
2. Rise in the water level in the range of 0-2m has been observed in 38.99 % of wells analysed, and found all over the state.
3. Rise in the water level in the range of 2-4 m has been observed in 8.84 % of wells analysed and mainly noted in Chennai, Dindigul, Chengalpattu, Madurai, Tiruppur and Tiruvallur districts
4. Rise in water level more than 4 m has been observed in 2 % of wells analysed and noted mainly in Coimbatore and Chengalpattu districts.
5. The fall in water level in the range of 0-2m has been observed in 34.35 % of wells analysed and noted all over the state and UT of Puducherry except Chengalpattu, Ranipet and Karaikal Region.
6. The fall in water level in the range of 2-4m has been observed in 11.01 % of wells analysed and noted mainly in Coimbatore, Dharmapuri, Dindigul, Erode, Salem and Tiruchirapalli districts.
7. Fall in water level more than 4 m has been observed in 4.78 % of wells analysed and noted isolated patches in some districts mainly in Dharmapuri, Erode and Tirunelveli districts.

3. WATER LEVELS FOR THE PERIOD NOVEMBER 2022 & NOVEMBER 2023

The water level data for November 2023 were compared with water level for the period November 2022. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-27** and **Plate-XXX**. A comparison of water level shows a rise in 49.48 % and a fall in 50.52 % of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The entire state and UT of Puducherry have recorded fall in more than 50% wells except Chennai, Chengalpattu, Madurai, Nilgiris, Ramanathapuram and Salem districts.
2. Rise in the water level in the range of 0-2m has been observed in 40.89 % of wells analysed, and found all over the state except Kallakurichi and Mayiladuthurai.
3. Rise in the water level in the range of 2-4 m has been observed in 6.67 % of wells analysed and mainly noted in Dharmapuri, Dindigul, Tirunelveli and Namakkal districts.
4. Rise in water level more than 4 m has been observed in 1.93 % of wells analysed and noted mainly in Kanyakumari, Erode and Tiruppur district.
5. The fall in water level in the range of 0-2m has been observed in 34.22 % of wells analysed and noted all over the state except Kanyakumari and Karaikal.
6. The fall in water level in the range of 2-4m has been observed in 8.89 % of wells analysed and noted all over the state except Ariyalur, Chengalpattu, Chennai, Kancheepuram, Kanyakumari, Nilgiris and UT of Puducherry.
7. Fall in water level more than 4 m has been observed in 7.41 % of wells analysed and noted isolated patches in some districts mainly in Coimbatore, Dindigul, Cuddalore, Dharmapuri, Erode, Namakkal and Tirunelveli district.

Confined Aquifer:

The Piezometric surface data of November 2023 were compared with that of November 2022. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-28 and Plate XXXI**. A comparison of water level shows a rise in 32.88 % and a fall in 67.12 % of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The Most of the Districts of the state have recorded fall in more than 50% wells except few districts such as Madurai and Theni.
2. Rise in the water level in the range of 0-2m has been observed in 27.21% of wells analysed, spread all over the State, except in Nagapattinam, Nilgiris, Perambalur, Pudukkottai, Ramanathapuram and Tiruvarur districts.
3. Rise in the water level in the range of 2-4 m has been observed in 3.85 % of wells analysed and noted mainly in Ariyalur, Coimbatore, Karur, Krishnagiri, Madurai and Namakkal districts.
4. Rise in water level more than 4 m has been observed in 1.81 % of wells analysed and noted in Ariyalur, Dindigul, Madurai, Pudukkottai, and Theni districts.
5. The fall in water level in the range of 0-2m has been observed in 31.07 % of wells analysed and noted all over the state except Thanjavur, Tiruvarur, Chennai and Karaikal.
6. The fall in water level in the range of 2-4m has been observed in 17.01 % of wells analysed and noted in some districts particularly in Coimbatore, Cuddalore, Erode, Pudukkottai, Namakkal. Madurai, Salem and UT of Puducherry.
7. Fall in water level more than 4 m has been observed in 19.05 % of wells analysed and noted mostly in Ariyalur, Cuddalore, Coimbatore, Erode, Tirunelveli and Tiruppur districts.

4. WATER LEVELS FOR THE PERIOD JANUARY 2023 & JANUARY 2024

The water level data for January 2024 were compared with water level for the period January 2023. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-29** and **Plate-XXXII**. A comparison of water level shows a rise in 66.61 % and a fall in 33.39 % of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The entire state and UT of Puducherry have recorded rise in more than 50% wells except Dharmapuri, Krishnagiri, Namakkal and Thanjavur districts.
2. Rise in the water level in the range of 0-2m has been observed in 48.21 % of wells analysed, and found all over the state.
3. Rise in the water level in the range of 2-4 m has been observed in 13.73 % of wells analysed and mainly noted in Chennai, Kanyakumari, Nagapattinam, Ramanathapuram, Theni and Tiruchirapalli districts.
4. Rise in water level more than 4 m has been observed in 4.68 % of wells analysed and noted mainly in Coimbatore, Erode and Ramanathapuram districts.
5. The fall in water level in the range of 0-2m has been observed in 22.93 % of wells analysed and noted all over the state except Chengalpattu, Dharmapuri, Erode, Namakkal and Tiruppur districts.
6. The fall in water level in the range of 2-4 m has been observed in 5.30 % of wells analysed and noted all over the state except Dindigul, Namakkal and Thanjavur districts.
7. Fall in water level more than 4 m has been observed in 5.15 % of wells analysed and noted isolated patches in some districts mainly in Dindigul, Erode, Namakkal and Salem districts.

Confined Aquifer:

The Piezometric surface data of January 2024 were compared with that of January 2023. The district-wise distribution of Ground water monitoring wells falling in different ranges of water level fluctuation is presented in **Table-30 and Plate XXXIII**. A comparison of water level shows a rise in 56.42 % and a fall in 43.58 % of the wells. Both the rise and fall is mainly in 0-2 m range.

1. The Most of the Districts of the state have recorded rise in more than 50% wells except few districts such as Cuddalore, Dharmapuri, Erode and Krishnagiri districts.
2. Rise in the water level in the range of 0-2m has been observed in 37.53% of wells analysed, spread all over the State, except in Dharmapuri, Karaikal, Nilgiris, Ramanathapuram, Thanjavur and Tirupathur districts.
3. Rise in the water level in the range of 2-4 m has been observed in 11.62 % of wells analysed and noted mainly in Erode, Kanyakumari, Madurai, Theni and Tiruppur districts.
4. Rise in water level more than 4 m has been observed in 7.26 % of wells analysed and noted in Cuddalore, Coimbatore, Madurai and Theni districts.
5. The fall in water level in the range of 0-2m has been observed in 23.97 % of wells analysed and noted all over the state except Chennai, Kancheepuram, Kanyakumari, Nagapattinam, Thanjavur and Tiruvallur districts.
6. The fall in water level in the range of 2-4m has been observed in 8.72 % of wells analysed and noted in some districts particularly in Coimbatore, Cuddalore, Erode, Krishnagiri and Tiruvannamalai districts
7. Fall in water level more than 4 m has been observed in 10.90 % of wells analysed and noted mostly in Dindigul, Karur, Krishnagiri, Tiruppur and Tiruchirapalli districts.

VII. CONCLUSIONS

The behaviour of ground water table during May 2023 to January 2024 in Tamil Nadu State and Puducherry and Karaikal regions of U.T of Puducherry has been studied by monitoring the dug wells tapping phreatic aquifers. The data on water levels was analysed in detail and salient features are as under.

1. The depth to water level recorded during Premonsoon (May 2023) varied from 0.1 to 39.2 m bgl. 91.25% of wells have recorded depth to water level within 10 m bgl during premonsoon period (May 2023), whereas during post-monsoon period (January 2024), about 93.77% of wells recorded water levels less than 10 m bgl. The depth to water level recorded during Postmonsoon (January 2024) varied from 0.02 to 44 m bgl.
2. The piezometric surface ranged from 0.22 m to 97.30 m bgl. 67.94% of wells have recorded depth to piezometric surface within 10 mbgl during premonsoon period (May 2023), whereas during post-monsoon period (January 2024), the piezometric surface ranged from 0.13 m to 94.1m bgl. 70.31% of wells have recorded depth to piezometric surface within 10 mbgl.
3. 88% of wells have recorded depth to water level within 10m bgl during August 2023 and 92% during November 2023. 60% of Piezometers have recorded Piezometric surface in the range of <10 m bgl during August 2023 whereas during November 2023, about 66% of piezometers have recorded in < 10 m bgl range.
4. 25.25% of wells have recorded fall in water levels and 74.75 % of wells recorded rise in water levels during May 2023 in comparison to decadal mean. 74.50 % of Piezometers have recorded rise and 25.50 % piezometers have recorded fall during that period.
5. 82.62 % of wells have recorded rise in water levels and 17.38 % of wells have recorded fall during January 2024 with respect to respective decadal means. 80.65 % of Piezometers have recorded rise and 19.35% piezometers have recorded fall during that period.
6. When compared the water level during the premonsoon (May) of 2023 with the premonsoon of (May 2022), rise was recorded in 21.06 % and fall in 78.94%. 32.07% of piezometers have recorded rise and 67.93 % of piezometers have recorded fall.
7. When compared the water level during the Post monsoon (January) of 2024 with the Post monsoon (January) of 2023, rise was recorded in 66.61% and fall in 33.39 %. 56.42% of piezometers have recorded rise and 43.58 % of piezometers have recorded fall.
